POSTGRADUATE PROSPECTUS 2016
POSTGRADUATE VIRTUAL OPEN DAYS

November 2015 • February 2016 • June 2016

Please see the website for specific dates and to register.

Website: www.york.ac.uk/virtualopenday
Email: postgrad-events@york.ac.uk
#YorkVOD
Russell Group
We are a member of the prestigious Russell Group of UK universities.

Pioneering research
York is a leading research university and you will work alongside academics who are at the forefront of their field at national and international levels.

Great career support
We offer excellent training, resources and opportunities to enhance your skills, studies and career, both inside and outside academia.

Global connections
We offer teaching, research and exchange partnerships with some of the world’s leading universities. Our students come from over 100 countries, creating a diverse and dynamic community.

Graduate community
Our graduate college, Wentworth, is home to the Graduate Students’ Association which provides support, advice and social opportunities for all of our postgraduate students.

Beautiful campus
The University’s landscaped campus is not far from York city walls with some of our departments based in the city centre at the King’s Manor.

Historic city
With its magnificent Gothic Minster, winding medieval streets, fascinating museums and excellent shopping, the city of York is one of the best places in the UK to live, work and study.

Vibrant nightlife
There is lots of choice for a night out, from an array of bars, pubs and clubs to music venues, theatres and cinemas, all within walking distance of the University.

Central location
York is conveniently situated right in the centre of the UK, with excellent rail and motorway networks, and international airports within easy reach.

Outstanding sports facilities
Our £9m York Sport Village was built in 2012 and includes a 25m swimming pool, an outdoor 3G football pitch, a 1km cycle track and a 250m velodrome.

Historic city

10 GREAT REASONS to choose York
By almost any measure, York is one of Britain’s most highly regarded – and popular – universities. A member of the prestigious Russell Group we regularly appear high up in tables of research rankings and we have been particularly successful in external assessments of teaching quality. If you come to York, you will be joining a university which is committed to maintaining the highest standards in university education with a curriculum informed by world-class research.

At York you will be taught by, and work with, staff who are at the forefront of developments in their subject area and who are committed to extending these developments to others through their teaching. In the most recent Research Excellence Framework (December 2014), which evaluates quality and impact of research in UK universities, we were ranked 14th overall out of 155 institutions and 10th for the impact of our research. Our proportion of research activity of world-leading 4* status is among the highest of any university. These achievements confirm that our research is at international levels of excellence, placing York eighth in an analysis of national results.

The University has been awarded five Queen’s Anniversary Prizes for Further and Higher Education, recognising the excellent quality of our research. We hold ten Athena SWAN awards, in recognition of our excellence in supporting women in science, engineering and technology. We are also one of the three first recipients of the Institute of Physics’ new Juno Practitioner award, designed to reward progress towards ensuring equal opportunity for all.

Worldwide Universities Network
As a founder member of the Worldwide Universities Network, we collaborate on projects of global importance with research-led universities in Europe, North America, Africa, China and Australasia, working together to promote research and teaching collaborations beyond the scope of an individual university. For more information, visit www.wun.ac.uk.

Programmes of study
The programmes of study offered by the University at postgraduate level are divided into five main groups.

Taught MA/MSc and Diploma/Certificate programmes
Full-time Masters programmes (180 credits) normally last one year and typically involve six to eight months of attendance at taught modules, followed by the production of a dissertation. Each taught module may have a value of 5, 10, 20, 30 or 40 credits.

Study times are usually doubled if taken part-time.

Postgraduate Diploma programmes (120 credits) normally last nine months. Postgraduate Diplomas may be offered as stand-alone qualifications or as a stepping-off point in a Masters programme.

Most taught Masters programmes also have a 60-credit Postgraduate Certificate stepping-off point, consisting of one or more defined combinations of taught modules. A small number of these Postgraduate Certificates are offered as stand-alone qualifications.

We also offer a small number of stand-alone Graduate Diplomas, which last between nine months and one year.

For all taught programmes, performance on modules may be assessed continuously or by means of assignments or closed examinations. The dissertation is on a relevant topic chosen by you in conjunction with staff responsible for the programme. The word length is normally between 15,000 and 20,000 words. The dissertation is always an integral element of the programme and of the assessment.

Further information about taught programmes can be found on the web at www.york.ac.uk/study/postgraduate/courses/taught.

MA/MSc degrees by research
Full-time MA/MSc degrees by research normally last one year; part-time MA/MSc degrees by research normally last two years. The difference from the taught programmes lies in the balance between coursework and work on a dissertation: the MA/MSc degree by research entails little or no coursework.

You work on your dissertation from a very early stage in the registration period. Assessment is normally based wholly on the quality of the dissertation.
MRes programmes
The Master of Research (MRes) degree programmes provide research training and other skills for those intending to pursue careers in social policy, social work, psychology or management, academic or industrial research, or careers in industry where an understanding of research will be useful. MRes programmes are full-time and last one year.

MPhil/PhD research degrees
The MPhil requires two years of registration full-time or four years part-time; the PhD normally requires three years of registration full-time or six years part-time. In some subjects you may have the opportunity to take a four-year (full-time) PhD programme which includes some taught modules in research skills.

The MPhil/PhD principally involves the production of a large-scale piece of written work in the form of a research thesis. Assessment is based on the quality of your thesis and also on your performance at an oral examination or viva.

Details of the PGCE are set out in a separate prospectus which you can request from the Department of Education; details of the PGDip in Nursing are on page 77; the MA in Social Work is detailed on page 150 and more information on the MPA programmes is on page 132 and page 149.

Distance learning
Online degrees at York offer the opportunity to study in a more flexible way. Our distance learning programmes are designed to deliver an academically rich and socially engaging experience. Students are encouraged to share understanding and to network with fellow colleagues and tutors.

Distance learning students are as important to departments as their campus-based counterparts, and as a result the same level of academic and pastoral support is provided. You will be assigned an academic supervisor for the duration of your studies, and will be taught by experienced module tutors. The modules provide a high level of interaction between tutors and fellow students.

As a distance learning student you will also benefit from the University of York’s extensive online library, a York email account, and supporting course materials.

For further information, visit www.york.ac.uk/distance-learning/courses.

General information
Quality and standards
The University’s qualification titles are consistent with the national UK Quality Code, which is compatible with the European Bologna Process. Further information on the UK Quality Code is available from the Quality Assurance Agency for Higher Education: visit www.qaa.ac.uk.

Start dates
Most MA/MSc/MRes/Postgraduate Diploma programmes start in September. PhD and MPhil programmes have standard entry points although it may be possible to start at other times of the year. However, some programmes may differ – see department websites for further information. Your study period will be taken as starting from the first day of the month in which you commence your studies.

Visiting students
If you are registered for a postgraduate programme at another university you may apply to spend a period (usually from one term up to one year) at York as a full-time visiting postgraduate student before returning to your own university to complete your qualification. Such students either take all or part of a taught Masters programme, or undertake supervised research. For more information, see www.york.ac.uk/study/international/visiting-students.

Eligibility
To take a postgraduate taught programme you should have obtained at least a second-class honours degree (or equivalent), and for entry to a research degree an upper second-class honours degree (or equivalent). Some programmes have a higher academic entry requirement so it is advisable to refer to the individual programme. Exceptions are made to these guidelines, especially for candidates wanting to take courses as mid-career continuing professional development.

For further information please contact the Postgraduate Admissions team (see inside back cover for details).
Resources and training

24/7 library facilities
Open 24/7, the University Library offers a wide range of different and exciting learning spaces. These include quiet and silent study zones equipped with power and access to the wireless network; IT facilities; bookable group study rooms with presentation equipment; social learning spaces; a café and vending machines; and flexible, open-plan group study space.

Just next door is the Borthwick Institute for Archives which houses one of the largest and most varied archive collections in any university in the UK. For further details see page 11. Also on site is the Raymond Burton Library for Humanities Research.

Our King’s Manor Library is located in the city centre and has collections relating to architecture, archaeology, medieval studies and 18th-century studies.

The University Library has a close association with York Minster Library which is open to all members of the University and is particularly valuable to students of medieval literature and history.

The SCONUL Access scheme, of which the University is a member, enables staff and research students to become registered borrowers at most other UK university libraries.

Investing in resources
The University has a rolling programme of investment in top quality resources to support your academic work. The Library collections include over 1.2 million items, and access to over 60,000 print and electronic journals. Our Electronic Library will give you access to a growing collection of quality information online, including over 200 databases and hundreds of thousands of e-books, images, statistics, data sets and other electronic resources.

Help when you need it
Library staff are always happy to help you, whether with directions to books and facilities in our buildings or with more detailed subject enquiries. So that you make the most of your time, our Academic Liaison Librarians and Research Support Team offer an introduction to our services in addition to providing seminars and workshops on research techniques and identifying resources. Whatever subject you choose to study, we look forward to welcoming you to our world–class Library.

University libraries
Tel: +44 (0)1904 323873
Email: lib-enquiry@york.ac.uk
Website: www.york.ac.uk/library
Twitter: twitter.com/UoYLibrary
Facebook: facebook.com/UoYLibrary

The British Library
The British Library Document Supply Centre (BLDSC) at Boston Spa, about 15 miles from York, provides a fast delivery service for loans and photocopies from its stock. Its Reading Room is open to researchers, and the University Library provides a regular transport service from York to Boston Spa.

IT Services
The University’s IT Services offer a variety of resources to support research and study. Students are provided with an IT Services account which gives access to a range of facilities including an email account, central filestore and printing.

IT Services maintain over 950 open-access computers in IT rooms across the Heslington campus and at the King’s Manor. Most of the rooms are open 24/7 and may be used by all students, regardless of their college – some are dedicated to graduate students. Print, copy and scan facilities are provided in most IT rooms, including colour and A3 printing and copying. Further IT facilities are available within many departments.

Users with laptops and other mobile devices can access the University network using wifi around campus. Access to the network (including the internet and email) is available in all on-campus college accommodation, and some off-campus accommodation, via the Network Access Service (NAS). If you are off campus, you can use our VPN (virtual private network) to access resources including filestore and printing.

We provide around 150 software packages centrally, ranging from standard office applications – such as word–processing, spreadsheets and presentations – through to specialist statistical, mathematical, geographic information systems (GIS) and graphics packages to applications development environments for those who need to create their own software. We also provide the Google Apps for Education suite, which offers tools for collaborative working. Many departments provide their own teaching software, most of which is available via centrally provided PCs.

User support is provided via the IT Support Office.

IT training
IT Services have produced a range of online materials to help you to tackle presenting your academic work with confidence and style, and develop skills for the workplace. If you are worried that your current skills are inadequate, we can arrange one–to–one mentoring to help get you started.
Research computing facilities
IT Services can provide extensive resources in support of your research. These include central large Linux servers for project development, with access to nVidia GPU computing and Intel Xeon Phi resources; local and regional High Performance Computing facilities, including access to the large regional N8-HPC facility (see http://n8hpc.org.uk); and virtual servers for system development.

IT Services also offers file storage for shared projects and large datasets; database infrastructure (Oracle, MS-SQL, mySQL); and advice and help with software development.

Yorkshire virtual learning
Yorkshare is the University’s virtual learning environment (VLE), allowing you to access programme materials and communicate with other students and staff via the internet. Not all programmes will use Yorkshare, depending on the teaching and learning needs of a particular module, but it is highly likely that you will use it at some point in your studies.

York’s VLE technology is used to offer you enhanced or new types of learning experiences such as simulation, discussion, collaborative projects and self-directed study activities, alongside your regular class contact time with staff and other students. You will use the VLE for academic skills resources, including an Academic Integrity tutorial. Yorkshare also enables access to reading resources via the Library’s electronic holdings and search engines.

Relive lectures through Replay
More and more departments are using Replay, the University’s online lecture capture system. Replay shows the lecturer’s presentation with an audio recording giving you a chance to revisit the contents.

Skills training for researchers
The Researcher Development Team (RDT) offer workshops designed to equip you with the skills, attributes and knowledge to thrive as an independent researcher. The many courses and workshops offer training in four broad areas: Knowledge and intellectual abilities, Personal effectiveness, Research governance and organisation, and Engagement, influence and impact.

There is also a portfolio of training and support to develop your confidence and expertise in teaching. Workshop topics include project management, presentation skills and team working, as well as research-related training on subjects such as publishing academic papers, preparing for your viva and writing a thesis. These courses are free to all York research students.

For more information on skills training, please see our website, www.york.ac.uk/research/graduate-school/support/skills.

Individual departments also run subject-specific skills and research training for postgraduate research students.

Every graduate student is allocated a supervisor who is a member of University staff.
Our research strategy for 2015 to 2020 describes how we nurture research success, underpinned by seven interdisciplinary themes to best meet the grand scientific, social and environmental challenges of our time. For information about our research strategy and some of the many highlights of our research, visit www.york.ac.uk/research.

York Graduate Research School

Our postgraduate students are a major driving force behind our inspirational and life-changing research programme. They sit at the heart of our academic research community, and while there are important differences in the ways our postgraduate researchers work in different disciplines, there are many common challenges and objectives. We have created the York Graduate Research School to ensure our research students have the full support of the University community.

The School provides a single point of contact and oversight for all matters relating to research students. It also co-ordinates the work of the various administrative units which support research students and aligns the training we offer with the needs of students and employers.

Whether you choose to do a research Masters, an MPhil or a PhD, you will take away valuable skills such as complex data analysis, development of conceptual frameworks, creative problem solving, and last but not least, the ability to write it all up in a thesis and defend it orally to academic experts.

During your time here, you will have guidance from supervisors – themselves leading researchers – and a wide range of training and learning experiences. For example, you will be able to attend conferences, carry out public engagement, teach undergraduates and set up research networks, helping you to develop and thrive.

Core training around the areas of personal effectiveness, research integrity and public engagement is provided by our award-winning Researcher Development Team. Specialists in the Information Directorate provide training and support for library and IT skills, and the Careers Service gives advice and support for making the best of your qualification in the marketplace.

The York Graduate Research School streamlines all these areas of support and guidance under one umbrella. That way we can ensure that you have the opportunities you want, the resources you need and the recognition you deserve as one of our postgraduate students.

York Graduate Research School

Website: www.york.ac.uk/ygrs

Research institutes, centres and facilities

As well as offering research programmes, the University has a number of research institutes, centres and facilities which act as a focus for specialist and interdisciplinary research. Many of these provide opportunities for postgraduate students to undertake research with leading academics and, if appropriate, to have access to some of the world’s most sophisticated technical equipment and resources.

Bioscience Technology Facility

Director: Dr John Pillmoor

The Bioscience Technology Facility is a nationally recognised research support facility, located in the Department of Biology, which provides researchers with access to the key technology platforms that are driving bioscience. These platforms span genomics, proteomics, confocal and electron microscopy, flow cytometry, recombinant protein expression and purification, molecular interactions and bioinformatics. The Bioscience Technology Facility was established in 2002, and has
Centre for Chronic Diseases and Disorders (C2D2)

Director: Professor Alex Wade

This is an institution-wide ‘virtual centre’ that was created to co-ordinate, promote and maximise the benefit of an exciting and richly diverse body of research encompassing illness and disabilities of infectious and non-infectious (including mental health) origin. Research on these important topics, at the individual, community and societal level, spans most academic disciplines, from the molecular sciences through health services research to research in the arts and humanities. C2D2 provides funding for blue skies and translational research, supports outreach activities and runs a postdoctoral internship programme. C2D2 does not directly run postgraduate programmes, and students interested in chronic diseases and disorders should apply directly to the most appropriate department.

Phone: +44 (0)1904 328876
Email: c2d2@york.ac.uk
Website: www.york.ac.uk/c2d2

Centre for Housing Policy (CHP)

Director: Professor Rebecca Tunstall

The Centre for Housing Policy (CHP) undertakes research in the broad area of housing and social policy. Most of the research falls into eight areas: homelessness; home ownership; housing finance; private rented sector; housing, health and support; housing and welfare systems; social rented housing; and neighbourhoods.

CHP was established in 1990 and is part of the Department of Social Policy and Social Work (see page 148). Currently there are ten research staff working in CHP in addition to the Director. Centre staff contribute to teaching and supervision in the Department.

Students who are interested in PhD opportunities should contact the Department of Social Policy and Social Work.

Phone: +44 (0)1904 321480
Email: chp@york.ac.uk
Website: www.york.ac.uk/chp

Centre for Hyperpolarisation in Magnetic Resonance (CHyM)

Director: Professor Simon Duckett
Co-Director: Professor Gary Green

This is a joint research centre of the Departments of Chemistry and Psychology. It is also associated with the Hull York Medical School, the Department of Biology and the York Neuroimaging Centre. Research focuses on the development and application of hyperpolarisation techniques in NMR and MRI which overcome their sensitivity limitations.

Phone: +44 (0)1904 321166
Email: bihr@york.ac.uk
Website: www.york.ac.uk/library/borthwick

The Borthwick Institute for Archives houses one of the largest and most varied archive collections in any university in the UK
Centre for Immunology and Infection (CII)

**Director:** Professor Paul Kaye

The Centre for Immunology and Infection (CII) is an interdepartmental centre created by the Hull York Medical School and the Department of Biology. The Centre aims to integrate the study of basic and clinical immunology, haematology, microbiology and parasitology; to build a greater understanding of the processes underlying infectious and non-infectious disease; and to develop new approaches to prevention and treatment.

Since its foundation, CII has recruited a range of internationally respected scientists and has become recognised as a leading centre in the fields of immunology, pathogen biology and experimental medicine, helping to develop successful new treatments for some of the most debilitating, and often most neglected, diseases worldwide.

CII’s research expertise is supported by world-class facilities, including state-of-the-art pathogen-containment laboratories and a specialist clinical suite that supports our clinical trials and volunteer studies (conducted through the York Clinical Research Facility, jointly operated with York NHS Foundation Trust).

For enquiries about postgraduate research opportunities, please contact us directly.

**Telephone:** +44 (0)1904 328845
**Email:** cii@york.ac.uk
**Website:** www.york.ac.uk/cii

Centre for Reviews and Dissemination (CRD)

**Director:** Professor Lesley Stewart

The Centre for Reviews and Dissemination (CRD) undertakes evidence syntheses evaluating the research evidence on health and public health questions of national and international importance. It has played a leading role in the development and promotion of evidence-informed decision making in health policy and practice. The findings of CRD systematic reviews are widely disseminated and have impacted on key areas of policymaking and on the quality of healthcare delivered.

The growing use of systematic reviews in health and social care requires the ongoing development of review methodology. CRD research has contributed to the development of methods to address key issues such as information retrieval, publication bias, narrative synthesis, network meta-analysis, individual participant data (IPD) synthesis, risk prevention and diagnostics.

**Telephone:** +44 (0)1904 321040
**Email:** crd@york.ac.uk
**Website:** www.york.ac.uk/inst/crd

Humanities Research Centre

**Director:** Professor Judith Buchanan

This major research centre for the arts and humanities is housed in the spectacular Berrick Saul Building at the heart of the University campus. The postgraduate study area, which is open 24 hours a day, provides high quality working and social space for postgraduate students. Seminar rooms, an auditorium, research centres and academic offices are also located within the building. The Centre acts as a focus for arts and humanities activities on campus and hosts an impressive range of reading groups, seminars, workshops and international conferences.

**Telephone:** +44 (0)1904 328097
**Email:** hrc-admin@york.ac.uk
**Website:** www.york.ac.uk/hrc

Institute for Effective Education (IEE)

**Director:** Professor Bette Chambers

This international applied research centre is concerned with finding out what works in learning and teaching – and why. We specialise in randomised controlled trials, systematic reviews, and translating knowledge into practice.

We have PhD places available. Your research proposal should reflect our staff interests, such as evaluating interventions to improve reading and mathematics, social and emotional learning, behaviour, parental engagement, the home learning environment, and education in the developing world.

Our students are registered with the University of York Department of Education, but please contact the IEE in the first instance if you are interested in studying with us.

**Telephone:** +44 (0)1904 328166
**Email:** iee@york.ac.uk
**Website:** www.york.ac.uk/iee

Institute of Railway Studies

**Contact:** Professor Mark Ormrod, Dean of the Faculty for the Arts and Humanities

Research includes the social, cultural, political, economic and technical history of the railways, their geographical development, and the theory and methods of the public display of the history of the railways and their physical remains. York offers excellent opportunities for research with the large collection of objects and the archival, photographic and library resources at the National Railway Museum.

Students may register for research degrees (MA, MPhil and PhD) in a range of participating Departments including those of Archaeology, English and Related Literature, History, History of Art, and the York Management School.

**Email:** mark.ormrod@york.ac.uk

Social Policy Research Unit (SPRU)

**Director:** Professor Roy Sainsbury

The Social Policy Research Unit (SPRU) was established in 1973, and is now one of the largest applied social science research units in the United Kingdom. The Unit has a national and international reputation for excellence in research in key areas of social policy, especially children and young people, disability, social work, health and social care, poverty, welfare, family and employment. We are concerned with policy development and service delivery to support vulnerable people.

SPRU undertakes and disseminates high quality research that contributes to the evidence base for policy and practice. Our research is methodologically rigorous, stands up to the highest scrutiny and is ethically sound. We report the views and experiences of service users, including people who are often neglected in research such as those with sensory impairments or communication difficulties. We are committed to involving users in shaping our work so that they are not the passive ‘subjects’ of research.

SPRU was awarded a Queen’s Anniversary Prize for Higher and Further Education in 2009.

**Telephone:** +44 (0)1904 321950
**Email:** spru@york.ac.uk
**Website:** www.york.ac.uk/spru

York Centre for Complex Systems Analysis (YCCSA)

**Director:** Professor Susan Stepney

This is a community of researchers (around 80 residents and a broader range of non-resident affiliates) bringing together groups from across science, social science and humanities departments with research interests in the development of novel mathematical, computational and conceptual tools for the analysis, simulation and implementation of complex systems. YCCSA supports a wide range of interdisciplinary research into complex systems, including novel hardware and software engineering, and the modelling of physical, biological and social complex systems at multiple levels of detail. YCCSA’s ethos is collaborative and collegiate – maintaining low barriers to engagement.

**Telephone:** +44 (0)1904 325377
**Email:** susan.stepney@york.ac.uk
**Website:** www.york.ac.uk/yccsa
York Environmental Sustainability Institute (YESI)

**Director:** Professor Sue Hartley
**Telephone:** +44 (0)1904 328640
**Email:** sue.hartley@york.ac.uk

This is a pioneering interdisciplinary partnership between physical, natural and social scientists providing the evidence base for sustainable solutions to global environmental problems. These problems have political, economic and sociological dimensions, so cannot be addressed by scientific and technological solutions alone. YESI’s integrated research themes – future food and fuel, global change, sustainable environments – reflect the pressing problems that humanity faces. There is exceptional strength in these research areas at York. YESI involves over 100 University staff with expertise in all aspects of environmental research and has links with over 33 businesses and NGOs and over 25 research institutions across the world.

**YESI Coordinator:** Sheila Davitt-Betts
**Telephone:** +44 (0)1904 328866
**Email:** sheila.davitt-betts@york.ac.uk
**Website:** www.york.ac.uk/yesi

York JEOL Nanocentre

**Co-Directors:** Professor Pratibha Gai and Professor Ed Boyes

This interdisciplinary research and teaching centre represents a major investment in leading-edge nanoscience capability by the University of York, the European Union and JEOL. It has one of the world’s most powerful electron microscopes with double aberration correction for access to the most fundamental atomic–level analyses of materials and devices with wide applications in Physics, Chemistry and Electronics. Under an EPSRC critical mass grant, the instrument has been custom–modified to create a world–leading capability for dynamic in–situ reaction studies of the fundamental atomic–scale science underpinning key industrial catalysis processes for producing chemicals, polymers, new fuels, biofuels and pharmaceuticals, and for environmental controls and remediation. Vortex beam analyses of magnetic device structures, wet cell studies of bio–mineralisation, hard–soft matter interfaces and development of new magnetic storage methods are among the major grant–supported programmes using the Nanocentre. Supporting equipment includes dual–beam focused ion beam (FIB), scanning (SEM) and transmission (TEM) electron microscopy, nanolithography, atomic force microscopy (AFM) and a sample preparation laboratory. The Nanocentre has wide international collaborations and an active programme of work with industry.

**Telephone:** +44 (0)1904 328403
**Email:** pratibha.gai@york.ac.uk ed.boyes@york.ac.uk
**Website:** www.york.ac.uk/nanocentre

York Neuroimaging Centre

**Director:** Professor Gary Green

The York Neuroimaging Centre (YNiC) is a research facility for investigating human brain function using non–invasive imaging techniques. It has become the hub of a multidisciplinary approach to understanding structural, chemical, functional and theoretical aspects of neuronal mechanisms. Facilities include: state–of–the–art 3Tesla magnetic resonance imaging, whole head magnetoencephalography, high density electroencephalography, transcranial magnetic stimulation and high performance parallel computing. The Centre was formed by a consortium of departments including Psychology, Computer Science, Electronics, Health Sciences and Chemistry. It has extensive links to the Hull York Medical School, clinical departments in the NHS and industry.

**Telephone:** +44 (0)1904 435346
**Email:** reception@ynic.york.ac.uk
**Website:** www.ynic.york.ac.uk

York Plasma Institute

**Director:** Professor Howard Wilson

The York Plasma Institute and associated laboratories have postgraduate teaching accommodation, video–conference meeting rooms and the Remote Tokamak Control Room from which staff and students can participate in experiments at fusion facilities around the world. Facilities include a suite of laboratories for the study and development of atmospheric pressure plasmas for technological applications; a specialist biomedical plasmas laboratory; a plasma nano–fabrication laboratory; a laser–produced plasma facility, and a magnetically confined plasma laboratory including a linear confinement device for studies of plasmas relevant to the edge of magnetic fusion devices.

**Telephone:** +44 (0)1904 322258
**Email:** jo.coulthard@york.ac.uk
**Website:** www.york.ac.uk/ypi

The Centre for Immunology and Infection is recognised as a leading centre in the fields of immunology, pathogen biology and experimental medicine.
Graduate life

From small beginnings, with just 230 students based in the King’s Manor in York city centre, we are now home to nearly 16,000 students from 120 countries, spread across nine colleges. University life is centred at Heslington on the edge of the historic city of York, where our colleges are set in an attractive landscaped campus. It is compact, easy to get around, and has a safe, friendly atmosphere.

Campus life

The new millennium signalled a dynamic period of growth for York. Since 2000, the University has invested in 20 new buildings on the existing campus and completed the first phase of a £750m campus expansion. This stunning development, Heslington East, includes four new departmental buildings, three colleges and a sports village. On the original part of the campus there have been major improvements to academic buildings as well as upgrades to teaching rooms, lecture theatres, IT facilities, laboratories, libraries, cultural, sport and social facilities and student accommodation.

The campus offers cafés, bars, shops, sports facilities, a health centre, theatres and concert halls all within easy walking distance. It is well connected, criss-crossed with an excellent network of cycle paths and benefits from a fast, frequent bus service to the city centre and our smaller central site, the beautiful medieval King’s Manor.

In term time there are major events each week, such as club nights, plays and shows and other society events covering almost every imaginable activity, from student-run choirs and sports tournaments to student radio and a TV station. A varied entertainment programme is provided for postgraduate students through the Graduate Students’ Association (GSA).

Right at the heart of the campus in Market Square is our Student Support Hub, cash machines and a Students’ Union outlet selling stationery, computer supplies, magazines, newspapers and snacks. The campus supermarket stocks an extensive range of groceries including international and Fairtrade products as well as fresh fruit and vegetables. An even greater range of oriental and specialist foods is available at two supermarkets within a 20–minute walk. The village of Heslington next to the campus has two pubs, a post office and newsagent, several banks and a village shop.

Our colleges

York is proud to be one of a handful of universities in the UK with a college system. It is one of the things that sets us apart from other institutions and is central to our students’ distinctive York experience.

When you join York, you will become a member of one of our nine colleges: Alcuin, Constantine, Derwent, Goodricke, Halifax, James, Langwith, Vanbrugh or Wentworth. If you opt for University accommodation this will determine your college membership or, if you live off-campus, you can choose which college to join.

Wherever you live and whatever your year of study, your college is there for you. It provides community, support and social activities as well as opportunities for leadership and development.

Community and support

Colleges provide an instant and diverse community. You will meet people of all ages, disciplines and nationalities, building friendships that will last a lifetime. Each college has a team of staff and resident postgraduates, led by the head of the college, which will support you in your life and learning in York.

Most of our colleges offer accommodation for postgraduates, including our dedicated graduate college, Wentworth. You may prefer to live off-campus but, wherever you live, your college facilities are available for you. These include graduate common rooms, study spaces, dining rooms and bars.

Leadership and teamwork

Another aim of our colleges is to encourage leadership and team–working skills and there are many opportunities for you to develop these. For example, resident postgraduates may wish to become a College Tutor and work alongside staff to support students. You may want to become part of an elected committee organising activities and representing the interests of your fellow members. Or you might choose to take part in a mentoring scheme to support new students and also be mentored by college staff or fellows.

One college founded a charity providing opportunities for students to volunteer as mentors for disadvantaged 11–year-olds in East London. Students and alumni train the volunteers and the project provides them with a life-changing experience.

In addition, college extra–curricular activities may contribute to the York Award. This employability certificate is highly valued by employers. You can gain recognition for skills training, work experience, volunteering and participation in clubs and societies.

You can learn more about each of our colleges on our website: www.york.ac.uk/colleges.

“York is one of the few UK universities that has a separate association just for postgraduates; I think that means a great deal. We’re involved in students’ lives from day one, from organising Welcome Week, to social activities, to offering impartial academic and welfare advice all year round. The GSA also hosts events tailored to postgraduates, such as Café Research and Café Masters sessions where students can talk about the challenges and advantages of being a postgraduate over a free coffee.”

JELENA, PhD IN EDUCATION, GSA PRESIDENT
Graduate Students’ Association

We are one of only a few universities in the UK to have an association specifically for postgraduate students. All postgraduates are automatically members of the GSA, a student-run body which serves our postgraduate students in these areas: representation, welfare, academic, events and trips, sports and community.

The GSA offers professional, confidential and specialist advice on academic and welfare matters. In addition, the GSA offers the Postgraduate Community Fund to which students can apply for support for projects to develop postgraduate life at York.

Through the GSA, postgraduates can access high quality skills training and professional networking events. The PhD Network is an informal social network set up by the GSA, which puts on events for research students. The GSA also runs daily free sport sessions, organises UK-wide trips and holds weekly events on and off campus. For students with dependants, the GSA organises a Family Network.

Graduate Students’ Association (GSA)

Email: info@yorkgsa.org
Website: www.yorkgsa.org

Students’ Union

The University of York Students’ Union (YUSU) is a body independent of the University representing the interests of all our students. It co-ordinates sport and social societies, provides welfare support and volunteering opportunities, campaigns on issues decided by students, and organises a range of entertainment on campus, working alongside the colleges and the Graduate Students’ Association (GSA).

On campus, both YUSU and the GSA organise a number of student activities. During term time there are major events each weekend.

YUSU offers the opportunity to get involved in an extensive range of activities. Many of these will give you valuable experience for your career in today’s competitive job market and for life. There are over 150 student societies, covering many interests including media, political parties, music and drama societies to cater for every taste, dance lessons, religious groups, film production, photography and YUSU’s own TV and radio stations. All these societies are entirely organised by and for students.

Students’ Union (YUSU)

Email: enquiries@yusu.org
Website: www.yusu.org

Sport and fitness

York Sport Union has more than 60 active sports clubs, from traditional to more specialist sports such as archery, fencing and sub aqua. A quarter of the student population is actively engaged in sport.

Work is being done to ensure greater participation from the broad base of students and to develop programmes to support performance and identify ways to support elite athletes, including sport and athlete scholarship schemes.

Most clubs play within British University College Sport (BUCS), regular leagues are organised through York Sport Union, and York’s inter-collegiate system provides regular competition in approximately 19 sports.

York also co-hosts the UK’s largest inter-university event, the annual Roses Tournament against the University of Lancaster. Students compete in more than 50 sports over the weekend, either in York or in Lancaster.

A brand–new way to keep fit

The new £9m York Sport Village opened in 2012 on Heslington East, marking a significant addition to our existing resources and creating some of the region’s most advanced sports and fitness facilities.

The Sport Village includes:
- an eight-lane 25-metre pool
- a four-lane 18-metre pool
- a 120-station fitness suite
- three dance and fitness studios offering over 70 classes a week
- a health suite with spa pool, steam room and sauna
- a 3G floodlit rubber–crumb pitch for football, lacrosse and rugby
- three floodlit 3G five–a–side pitches
- a 1km cycle circuit and a brand–new 250m velodrome.

York Sport Village forms only part of our significant investment in sport across the whole campus. Other campus facilities include a floodlit artificial pitch for hockey and football; tennis and netball courts with dome for winter use; sports halls for badminton, basketball and volleyball; squash courts; county–competition standard 400m athletics track with field sports facilities; and 49 acres of grass pitches for rugby, football, lacrosse and cricket.

The Sport Centre on Heslington West includes a 70–station fitness suite, fitness classes and a strength and conditioning suite with fully qualified fitness instructors who are able to work with individuals and York Sport Union teams to enhance player performance.

Our successful boat club has its
own boat house on the River Ouse, and the student Golf Club has access to the adjacent Fulford championship golf course.

Culture and music

Student media
Many York graduates have gone on to successful careers in the media, including BBC foreign correspondents, newspaper editors, radio presenters – and Greg Dyke, former Director-General of the BBC and former Chancellor of the University.

YUSU has some of the oldest and most respected student media organisations in the country. University Radio York, which broadcasts across campus and around the world, was Britain’s first independent radio station.

York Student Television broadcasts a range of programmes over a campus cable network and online to the world.

Our two student newspapers, Nouse and Vision, have a readership of over 3,000 and in recent years both have won a string of prizes in the Guardian Student Media Awards.

Award-winning drama
York has a long-established tradition of active and adventurous student drama. The Drama Society runs its own performance space and also mounts productions in other venues on campus and in York. Each term sees at least six productions, often of plays by student playwrights, and several student companies perform at the Edinburgh Festival each year.

The many York graduates who have gone on to highly successful careers in theatre, film and television include Denise O’Donoghue (co-founder of Hat Trick productions), Simon Stephens and Nick Payne (both award-winning playwrights), Harry Enfield (comedian), Genista McIntosh (former executive director of the National Theatre) and David Thacker (theatre and television director).

Music for all
Music plays a central part in the city’s cultural scene and there are numerous places on campus and in York to hear and perform live gigs and concerts. Societies, student-run ensembles and the University itself provide countless opportunities to play, listen and perform, whatever your level of commitment.

There are lunchtime and evening concerts virtually every week on campus, with dedicated performance venues including the Sir Jack Lyons Concert Hall and Central Hall. Membership of the Music Society allows access to practice rooms in Derwent College for non-Music students. Instrumentalists and singers can audition for the University Orchestra (at which you may be offered chances to play with other ensembles), the Baroque Ensemble, the Jazz Orchestra and the Chamber Choir.

There are also several less formal ensembles, mostly run by students and non-auditioning, including the Concert Orchestra, Concert Band, Brass Band and Gospel Choir. The Students’ Union has several active music societies, including a Gilbert and Sullivan Society, a rock gospel choir and the Central Hall Musical Society. Fusion, a large annual fashion, dance and music show in Central Hall, involves a broad range of individuals, societies and organisations in and around York and raises thousands of pounds for charity. Last but not least, the University Choir performs major choral works every term in venues such as York Minster, and is open to students without audition.

City life
York was recently voted the best and most beautiful place to live in the UK. There is plenty to impress: the famously soaring Gothic Minster, the winding medieval streets, the specialist stores and boutiques – life in York is varied, colourful and lively, and its historic streets bustle with visitors from all around the world.

With its shops, galleries, clubs, cafés, museums, theatres, music groups and sports clubs, York really does offer something for everyone.

The city has one of the top racecourses in the country and a number of private health and fitness clubs, and facilities for hang-gliding, riding and other non-campus sports can all be found nearby. And, of course, York is famed for its pubs, bars and restaurants. There is a thriving café culture and afternoon tea at Bettys is a world-famous York tradition, the perfect treat for visitors.

York has a population of 200,000, so it is big enough to feel cosmopolitan but small enough not to be overwhelming. It is a friendly place you can settle into quickly, but which still feels fresh and exciting as you get to know it well.

Festivals
The city is a busy cultural centre for its residents as well as a tourist magnet. The annual Festival of Ideas, a collaboration between the University and other city partners, brings together a range of world-class speakers, exhibitions and performances.
Chinese New Year festivities are only a part of a huge array of international events celebrated in York. The Viking Festival, St Nicholas Fayre, the Festival of Angels, the famous Food and Drink Festival, Science Week and a continental Christmas market combine to provide a varied programme of events throughout the year.

Nightlife and entertainment
As you would expect from a city with so many students, life in York is as energetic and varied by night as by day. There is an impressive range of city centre clubs offering R&B, hip hop, dance, chart classics, indie, rock, Latin, soul and more – and there are student nights throughout the week.

For live music aficionados, York has an eclectic mix of venues attracting aspiring musicians and established acts alike. Whatever you are into, you will find something to your taste. Throughout the year the Students’ Union, colleges and societies organise nights out to the big-name venues of Leeds and Manchester. A fast late-night train service puts these cities in easy reach of York.

Theatre-lovers can visit York’s Theatre Royal and the Grand Opera House for drama, dance, music and opera. The art-house City Screen cinema shows world cinema and big-name blockbusters. There is also a Reel cinema in town and a larger 12-screen complex out of town.

Superb shopping
With more than 2,000 stores, York offers some of the most distinctive and stylish shopping in the UK. Major retail chains and big-name high street outlets mingle with designer boutiques, specialist stockists and organic food retailers. The city centre is compact, with many shops set in York’s medieval streets, but you will also find modern shopping complexes and a designer outlet on the outskirts. The thriving open-air market in the city centre is open daily and is a good source of fresh fruit and vegetables, meat, fish and cheeses.

A well-connected city
York is one of Britain’s best-connected cities. As it is situated almost halfway between London and Edinburgh on the East Coast mainline, intercity trains reach London in less than two hours and Edinburgh in two and a half. With Eurostar from London St Pancras, Paris is just over six hours away. York is also well served by road links, and it is easily accessible from the A1, the M1 and the M62.

For those travelling from overseas, Manchester Airport is two hours away and Heathrow just three and a half. Ferries from Hull and flights from nearby Leeds Bradford Airport provide easy access to mainland Europe.

For more information about life in the city of York visit: www.york.ac.uk/city
Student support

We want you to get the best from your time at York. There is a network of support services designed to give you easy access to help and advice on many topics, should you require them.

Health and wellbeing
The specialist teams based in Student Support provide advice and information about money matters, emotional and mental health concerns, disability support, health, self-certification, visas, housing, academic progress and any other area of student life.

Located in Market Square, the Student Support Hub is the first point of contact for all enquiries related to central student support. Staff based in the Student Support Hub provide information about and make initial appointments for the Open Door team, Disability Services and the Student Financial Support Unit.

Psychological and emotional support
The Open Door team provides professional support to students with a range of emotional and mental health difficulties. About one in ten of our students make use of its services at some point during their time at York. You can make an initial appointment with an Open Door practitioner to discuss how best to tackle any problems. See the website at www.york.ac.uk/opendoor.

Disability Support
One in ten students are registered with Disability Support who enable adjustments for students with disabilities such as sensory or physical impairment, mental health difficulties, medical or health conditions, autistic spectrum conditions, or specific learning disabilities such as dyslexia. We treat each student as an individual.

Students may also be interested in the Joan Samuels Memorial Bursary. This is open to students with disabilities and contributes £1,000 towards a postgraduate student’s course fees.

Further information can be found on the Disability Support website: www.york.ac.uk/students/support/disability.

Health services
The University health centre is based on campus with easy access for all students. It provides access to an integrated team of health professionals and offers a range of services including sexual and mental health initiatives, study-related issues and travel clinics. See the website at www.york.ac.uk/healthinfo.

This service is hosted by the University and provided by the NHS. For more information about NHS provision, including dental and emergency services, visit www.nhs.uk/pages/Homepage.aspx. See the website at www.york.ac.uk/healthinfo.

Nightline
Nightline is a confidential listening and information service run independently by students for students. It is open from 8pm to 8am every night during the main undergraduate terms. The service is non-judgemental and provides anything from a cup of tea and a chat to a space to discuss personal problems, or to pick up information on a large range of student issues.

Faith provision
There is a University chaplaincy team available to people of all faiths and none. In addition there is a wide range of faith contacts who work to support the community on campus. See www.york.ac.uk/univ/chap.

There are three full-time chaplains (Anglican, Catholic and Methodist) and links with local Evangelical, Orthodox, Pentecostal, Quaker, Unitarian and URC groups. In addition there are contacts for Bahá’í, Buddhist, Hindu, Islamic, Jewish and Sikh faiths and a number of prayer and meditation facilities on campus. See www.york.ac.uk/faiths.

Childcare
Information on the range of childcare options available can be found at www.york.ac.uk/students/support/welfare/childcare. York Campus Nursery is situated in its own grounds near the University Health Centre, and is registered with Ofsted.

Equality, discrimination or harassment
The University of York aims to promote positive attitudes towards equality and diversity and to ensure that everyone working, studying or living at the University is treated fairly and with dignity and respect, in an environment where harassment is unacceptable.

There are a number of sources of support available to students who wish to discuss any matters of concern. Further information is available on the Equality and Diversity Office website, which gives information about harassment, bullying and discrimination, legislation, guidance and good practice. You can also contact Student Support Services

“Since arriving at York to do my postgraduate course I have had a great experience with Disability Services. They’ve been really friendly and have always seen me when I needed them. The support I’ve had has really helped me gain confidence in my writing skills and overcome my dyslexia. I couldn’t have managed my essays and workload without it.”

CLARE, MA IN SOCIAL WORK
for advice on a wide range of welfare issues. The Equality and Diversity Office is based on campus in the Sally Baldwin Buildings, Block D.

Equality and Diversity Office
Tel: +44(0)1904 324680
Email: equality@york.ac.uk
Website: www.york.ac.uk/admin/eo

Supervisory system
Every graduate student is allocated a supervisor who is a member of University staff. The main responsibility of supervisors is to offer guidance and advice on your academic work in general and, if you are a research student, on the preparation of your thesis in particular. In addition, research degree students have a Thesis Advisory Panel that exists to monitor and supplement the relationship between you and your supervisor. Taught course students may be allocated a separate supervisor to oversee the preparation of their dissertation or project.

Supervisors also have a pastoral role and are available to offer guidance on personal matters that are affecting your studies and direct you to support or self-help resources. For taught course students this role is also covered by the director/convenor of the course concerned; and both research degree and taught course students can also take such matters to the Chair of the Department’s Graduate School Board.

They will assist you, either in person or by signposting you to the appropriate University support service.

Administrative support
The Registry Services office is the central focus within the University for administrative support for graduate students after you enrol at York. The office deals with all matters to do with your record and official correspondence. On general postgraduate student matters it works closely with departmental graduate schools, supervisors, the colleges and, where appropriate, central University support services. Registry Services is in the Student Administration Building on Vanbrugh walkway.

Registry Services
Tel: +44 (0)1904 324643
Email: registry-services@york.ac.uk
Website: www.york.ac.uk/registry-services

Financial Support
The Financial Support team administers a number of bursaries, US loans, scholarships and hardship funds. Other financial support services and information on student funding can be found on page 28.

International students
The University offers a range of support services specifically tailored to international students’ requirements. These include an Immigration Advice Service to assist students making visa applications, an orientation programme for new students in September and January, international representation within college networks and the Students’ Union, the York Ambassadors Scheme, English language courses, and an International Student Support Co-ordinator. Throughout the year presentations and workshops are offered on academic skills and immigration matters.

Contact the International Student Support Co-ordinator or visit our website for further information.

International Student Support Co-ordinator
Tel: +44 (0)1904 324140
Email: international-support@york.ac.uk
Website: www.york.ac.uk/internationalsupport

College teams
Colleges provide a social and community focus for graduate students. All colleges have a team available 24 hours a day, led by the head of the college, with an assistant, College Tutors and College Administrator. Students also elect representatives within each college who can provide peer support to other students.
### International students

The University of York has been welcoming students from all over the world since it was established in 1963. International students form an integral part of the community on campus, and the University is committed to enabling you to make full use of your time here.

### Applying to York

There are a number of ways in which we can help you as you prepare to apply to York. Our staff make regular overseas visits, and our website will tell you when and where you can meet them. You can get advice and support with submitting your application and preparing to study in the UK, and we can put you in touch with York students or alumni from your country through our York Ambassadors Scheme. They can give you important advice about studying at York as well as sharing their experiences with you.

Wherever you are from, you can be sure that you will receive the very best support from the moment you enquire about studying with us. Here are just a few reasons why students choose York:

- The University is a member of the prestigious Russell Group of leading UK universities.
- York was voted Best University Experience in the International Student Choice category at the 2014 Whatuni Student Choice Awards.
- In 2013 we were placed seventh in the world in the Times Higher Education world rankings of universities less than 50 years old.
- We have a beautiful parkland campus close to the centre of the historic city of York, recently voted European Tourism City of the Year.
- York was voted safest place to visit in the world in a survey by a travel insurance company.
- York has excellent rail links and is just two hours by train from London, so Heathrow and Gatwick airports are within easy reach. The nearest international airports are at Manchester and Leeds–Bradford.

### How to apply

General information on how to apply for postgraduate programmes at York can be found on page 32. However, you can find additional information specific to international students on our website at www.york.ac.uk/international such as:

- entry requirements for students from different countries
- additional information for students from the countries where we receive the most applications
- a schedule of overseas visits by our recruitment staff
- contact details of our agent representatives overseas who can advise you on matters relating to your application.

Applicants for research degrees are strongly encouraged to consult the relevant department’s research pages to identify research areas of interest and the respective academic supervisors. It will help us to process your application if you specify this information when completing your documentation.

### After you have applied

When you have completed your application, you may still have questions about the application procedure, how long you will wait to receive a decision and what you should do if you receive an offer. You will be able to track your application via the You@York applicant portal. Other essential pre-departure information is available on our website or by contacting us.

### Visas and immigration

Many international students will need to apply for a visa in order to study full-time in the UK. To find out if you need a visa, please refer to our Immigration Advice Service web pages. You will also find information on how to apply for a visa and what documents you will need to provide.

Postgraduate students applying for certain science, engineering or technology programmes may need to apply for an Academic Technology Approval Scheme (ATAS) certificate before applying for a visa.

To find out more about applying for a visa or an ATAS certificate, please visit www.york.ac.uk/immigration.

Other useful websites include:

- www.york.ac.uk/study/international/support
- www.gov.uk/apply-uk-visa
- www.ukcisa.org.uk.

### Support and services

We recognise that living in a new culture is an exciting opportunity that may bring some challenges.

The University offers a range of services to help you get the most from your studies, beginning with an orientation programme...
to introduce you to the University, English language courses and workshops. In addition, the International Student Support team offers immigration advice and many other services. For more information visit our website at www.york.ac.uk/international-support.

English language
The University provides English language, literacy and communication services to international students through the Centre for English Language Teaching (CELT). Most term-time courses and workshops are available free of charge.

Students whose first language is not English are normally asked to provide evidence of English language ability before admission to the University (see page 33 for further details). CELT provides communication and study skills services for international students both before and during their studies.

Before you enter
CELT offers a range of courses to help students prepare for their academic programme.

- The University English course (April–June) comprises general proficiency, orientation to British culture, academic language skills and preparation for the IELTS examination. This 10-week course can form the first part of an 18-week programme (April–September) that combines with pre-sessional courses to prepare students for entry into degree programmes in October.

- The 10-week and 8-week pre-sessional courses starting in July provide a route into departments that avoids an IELTS test resit for students holding IELTS results 0.5 lower than required for their degree programmes. The 10-week course is for students taking Management programmes; the 8-week course is divided into four separate routes, one of which is specifically for students taking the MA in TESOL.

- The 4-week pre-sessional course starting in August is for students with unconditional offers who want to have a thorough introduction to the academic requirements of their degree programme.

- All pre-sessional courses comprise intensive development of language, academic study skills and academic conventions for UK university study.

After you enter
Several different courses are available, mostly free of charge, to help you develop the language and study skills needed for a successful university career as a student.

Centre for English Language Teaching (CELT)
Tel: +44 (0)1904 322480
Email: celt@york.ac.uk
Website: www.york.ac.uk/celt

IT and wireless access
In addition to over 950 open-access computers, the University has wireless hotspots in many social spaces on campus, including cafés, bars, the Information Centre, the Library and departments. All on-campus college accommodation and some off-campus accommodation has wifi and wired access, at no extra cost. For full details of IT facilities, please see page 7.

Settling into York
Meeting other students
Even before you arrive at York, the York Ambassadors Scheme can put you in contact with current students from your part of the world.

“I chose York because it offered the best combination of a world-class education and a truly British experience. The international team was very helpful before I arrived. Someone even met me in Chicago before I left, making the whole experience easier. The college communities help you to feel at home quickly and are a great way of getting involved in extra-curricular activities and making friends. My course has been fantastic, and the academic support has been first class.”

SARAH, MA IN APPLIED HUMAN RIGHTS
Enhancing your career

From the moment you arrive at York, we are committed to helping you develop the skills employers are looking for and prepare for your future career. We offer a wealth of opportunities, from internships, volunteering and transferable skills programmes to enterprise support and activities, all geared to helping you stand out from the crowd. Our Careers team will help you make the most of these opportunities.

Our aim is to ensure that all students have rich opportunities to develop their creativity, innovative thinking and an international outlook. As a York graduate you will have a wide range of career options. Some career routes relate to subjects studied at university, while more than two thirds of UK jobs are open to graduates of any discipline. These employers are as interested in the wider skills and work experience you gain while you are at university as they are in your postgraduate qualification.

As a Russell Group university, York enjoys an enviable reputation among major graduate recruiters. We also have excellent relations with recruiters and York alumni in particularly competitive career areas, such as the media, voluntary, public and not-for-profit sectors.

As a postgraduate you have a number of options – to continue with your academic career, embark on professional study or training, seek a career in a related or unrelated field or take time out to travel or gain experience to help you get into your chosen job. It is never too early to start planning for your longer-term goals.

If you are taking a one-year programme, you need to start career planning as soon as the academic year begins, especially if you wish to find employment immediately after your programme. Many employers begin their recruitment process in September for the following autumn, with some closing dates well before Christmas.

Careers services and activities

Our award-winning, online Employability Tutorial enables you to assess your skills, research career opportunities and receive advice on how to gain experience and develop new skills to prepare for your future. The Masters Careers Timeline also helps you decide what to do at different points in your course and how best to access available support. Our services are not just about helping you to work out your next steps. Careers offers experiential learning projects, training, networking opportunities and events to help you get ahead in the job market.

Our website includes information about opportunities in different employment sectors, graduate destinations, assessment centre tests and advice on job hunting and the recruitment process. An extensive events programme gives you opportunities to meet employers offering graduate jobs and internship opportunities, and information and networking events covering a range of job sectors, including media, public sector, heritage, science and environment. Through our online Careers Gateway, you can view and apply for a wide range of vacancies for graduate, part-time and work experience opportunities.

If you need more help, you can visit Careers where information specialists and careers advisers can help with all aspects of career planning, including job applications and preparing for interviews. Careers staff also run workshops and other activities in academic departments. For more information, find us on Facebook and Twitter, and visit www.york.ac.uk/careers.

Promoting enterprise

The University has been shaped by a culture of enterprise and innovation. We are keen to instil similar qualities in our students, encouraging them to become the social entrepreneurs, enterprising employees and successful business owners of the future. In our flagship Ron Cooke Hub, the Student Enterprise Space provides professional hot-desking facilities. It is the perfect base for a fledgling business where students can meet fellow entrepreneurs, share ideas and gain contacts. We also run a programme of events, workshops and competitions to help you to understand the processes of business start-up. If you would like to try your hand at launching a business, there is funding available with business advisers on hand to enable you to realise your ideas.

York Entrepreneurs is one of the largest student societies on campus and organises activities throughout the year including its own version of ‘The Apprentice’. See www.york.ac.uk/careers/enterprise.

Links with employers

The University of York has strong relationships with a wide range of employers seeking to employ our graduates. We work closely with large blue-chip as well as small- and medium-sized employers to find out what they are looking for in graduates. In every field they are looking for students who have maximised their opportunities at university. York offers a valuable breadth of ways to develop the skills employers seek, making us an important destination for top recruiters. Our top recruiters include professional service firms such as Deloitte, KPMG, PwC and EY, as well as the BBC, Teach First and the NHS.

Careers organises a programme of careers fairs and events on campus, when you can meet employers to explore your future job options and find out about work experience and graduate schemes. Employers also get involved in our sector and skills talks. Our website advertises hundreds of graduate opportunities and students can register for tailored email updates for new vacancies.

Our Student Internship Bureau advertises project-based work opportunities on behalf of employers, helping you to enhance your career prospects. See www.york.ac.uk/careers/sib.

Developing professional networks

Many of our graduates keep in touch with the University and are happy to support you with your career choices. Our events programme brings together current students with recent graduates and established alumni to provide valuable connections and opportunities in today’s competitive job markets across a range of sectors. Students benefit enormously by learning from their peers, making our alumni mentoring scheme a popular opportunity. Careers also hosts hundreds of graduate profiles online for you to explore a range of career paths and make useful contacts. See www.york.ac.uk/careers/profiles.

Volunteering

Volunteering is an excellent way of supporting your local community as well
Our Professional Connect programme brings together recent graduates and established alumni to make useful contacts and explore a range of career paths.

as developing skills and experience valuable for work and study. Through York Students in Communities you can find placements with organisations across York. Or you could apply to use your skills on a specific project or create your own project with our support. There are opportunities to work in a variety of sectors, including arts, heritage, welfare, environment and research. To find out more, visit www.york.ac.uk/careers/communities.

The award-winning York Students in Schools (YSIS) provides over 600 students a year with the opportunity to volunteer in local schools. You could undertake a placement as a classroom assistant in a wide variety of activities, support extra-curricular learning, or volunteer to support pupils in your native language. Students develop communication and organisational skills, increase their confidence and enjoy being part of a community. They also gain an insight into teaching and other professions that work with young people. To find out more, visit www.york.ac.uk/careers/ysis.

The Students’ Union also co-ordinates a number of volunteering opportunities (see page 16).

Learning a language

Employers are increasingly looking for graduates with a global perspective; through our Languages for All courses, you can choose from a wide range of language courses (in 14 languages, from beginner’s to advanced level) which will give you a highly marketable skill when you apply for jobs in today’s global working environment.

As a postgraduate, you may need to carry out research in another country, attend conferences abroad, work with colleagues in an international context or read materials in a foreign language. We offer short (four-week), medium (eight-week) and long (19-week) courses to meet the needs of postgraduates working within an environment where a variety of skills are required. In addition to our courses, you will have the opportunity to benefit from individualised language learning advice and to participate in our language exchange scheme to practise your skills with a native speaker.

On successful completion of your course, you will be awarded the LFA certificate. For further information, including details about the range of languages offered, course levels and fees, please see our website.

York Alumni Association

When you complete your course, you will be invited to join the University of York Alumni Association (YAA). The Association is open to all graduates of York and focuses on providing career support and networking opportunities to its 100,000 members across the globe.

As a postgraduate student, you can access support from the YAA through Careers. We offer:

- an alumni mentoring scheme, which provides access to alumni for advice and mentoring
- Working In… networking events with alumni across a range of sectors and professions
- graduate profiles from a range of industries.

Upon graduation and becoming a full member of the Association, you will benefit from a graduate email account, regular e-newsletters, online journal access, the YAA Network programme for professional alumni–to–alumni networking, invitations to alumni reunions and alumni discounts, as well as access to fellow graduates across the globe.

York Alumni Association

Tel: +44 (0)1904 324467

IT skills

IT Services provides training to help you improve your IT skills for university and your future career. See page 7 for more information.

York Alumni Association

When you complete your course, you will be invited to join the University of York Alumni Association (YAA). The Association is open to all graduates of York and focuses on providing career support and networking opportunities to its 100,000 members across the globe.

As a postgraduate student, you can access support from the YAA through Careers. We offer:

- an alumni mentoring scheme, which provides access to alumni for advice and mentoring
- Working In… networking events with alumni across a range of sectors and professions
- graduate profiles from a range of industries.

Upon graduation and becoming a full member of the Association, you will benefit from a graduate email account, regular e-newsletters, online journal access, the YAA Network programme for professional alumni–to–alumni networking, invitations to alumni reunions and alumni discounts, as well as access to fellow graduates across the globe.

Global programmes

We believe that every student should have the opportunity to gain an international experience of some kind. We recognise that students will have careers in a global marketplace and that international activity broadens the educational experience. Through our Centre for Global Programmes, we can offer students a range of exciting options to study or work abroad. York has links with top academic institutions and employers all over the world and is a member of the prestigious Santander Universities and Worldwide Universities Network groups.

International Study Centres
York’s International Study Centres encourage students on any degree programme to reap the employment and developmental benefits of a short period of learning abroad. Every year the programmes are offered in conjunction with a different international partner university and provide students with an academic and cultural experience. The multidisciplinary themes require no previous subject knowledge, are designed to be accessible to all participants and cover a wide range of topics such as biodiversity and sustainability, leadership and community partnership, and history and politics. Previous locations have so far included the USA, China, Brazil and South Africa. Check our website for locations and further details of future International Study Centres.

Research collaboration
York is a member of the Worldwide Universities Network (WUN), a partnership of world-class research-led universities across five continents. Funding is available to support activities with WUN partners. This includes the Research Mobility Programme as well as local and central WUN Research Development Funds.

Summer placements
The Centre for Global Programmes, together with Careers, can help you to explore a wide range of potentially life-changing experiences though volunteering programmes, language and cultural immersion courses and career-related summer schools.

Academic exchange
You can enrich your experiences as a student and enhance your employability with a period of study or research overseas through programmes such as the Erasmus exchange scheme. Depending on the length of your course, you can spend part of your studies abroad, with full academic recognition. Grants are usually available towards the costs of travel and living expenses. We also have a number of discipline-specific exchanges outside Europe, such as our Arts and Humanities exchange with Rhodes University, South Africa.

Travel awards
As well as the WUN research-focused awards, financial support is available for a range of international student activities. Our alumni support a small number of travel bursaries for students wishing to pursue organised and independent travel projects abroad during their studies at York.

We are grateful to Santander Universities for generously funding the Santander International Connection Awards. Students can apply for grants through the scheme to support international visits or projects involving travel to the following countries:
- Argentina, Brazil, Chile, Colombia, Mexico, Puerto Rico, Uruguay, USA
- Belgium, Germany, Poland, Portugal, Spain
- China, Russia, Singapore.

We also assist students with applications for external funding related to specific programmes.

Applying
All of our programmes are competitive and we select participants through a process of application and interview. When you arrive at York, you will be given information and invited to events to help you choose the right programme for you. To keep up to date with our programmes please visit our website regularly.

2014 International Study Centre students at the Great Wall of China
Accommodation

With over 1,000 rooms for postgraduate students, we can offer a range of options to suit you and your budget. All our accommodation is on or close to campus, so you will never be far from lectures, the Library, catering outlets and social facilities. We are able to help most applicants who apply by our deadline, and if you qualify for our accommodation guarantee we can offer you a room for each year of your course.

What we offer

Our room types range from economy rooms to newly built deluxe accommodation, with a large proportion of ensuite rooms available for postgraduate students. All our postgraduate accommodation is self-catered, usually with a 51-week let length.

Prices for University accommodation include heating, electricity, water and internet access – with wifi available in every bedroom. Communal areas are cleaned regularly, and we have a 24-hour security presence on campus.

Whether you live on or off campus, you will be a member of a college (see page 15) and have access to a range of college facilities such as bars, cafes, dining halls, common rooms and study areas.

Many of our postgraduate students live in Wentworth College, our postgraduate-only college. Most of our other colleges also have dedicated houses or flats for postgraduate students.

Applying for accommodation

If you are joining us at the start of the academic year, you will be able to apply in the spring once you have firmly accepted your offer of a place at York and met all the conditions of entry.

Our online application system will ask you to list in order of preference our accommodation room types and colleges. If you accept a room offer you will need to make an advance payment which we will deduct from your first term’s rent.

If your course starts part-way through the academic year, check our website to find out when to apply for accommodation and how we can help you.

Additional requirements

We have a number of bedrooms and kitchens which have been designed or adapted for students with disabilities. If you need a specific type of room or location for health, disability or other reasons, it is important that you let us know when you complete your online accommodation application so that we can identify a suitable room for you. Some colleges also offer areas for students with other preferences, such as quiet blocks and single-gender accommodation. You will be given a chance to request this during the application process.

Example accommodation costs

<table>
<thead>
<tr>
<th>Room type</th>
<th>Shared bathroom price per week 2015/16*</th>
<th>Ensuite price per week 2015/16*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Economy</td>
<td>£103.11</td>
<td></td>
</tr>
<tr>
<td>Standard</td>
<td>£121.94</td>
<td>£131.95</td>
</tr>
<tr>
<td>Premium</td>
<td>£125.72</td>
<td>£135.24</td>
</tr>
<tr>
<td>Deluxe</td>
<td>£139.23</td>
<td></td>
</tr>
</tbody>
</table>

*Please note these prices are indicative and will change for 2016/17 entry. Our prices are reviewed each year to reflect the variety, standard and type of rooms available. Our postgraduate accommodation usually has a 51-week let length.

Accommodation Services

Tel: +44 (0)1904 322165
Email: accommodation@york.ac.uk
Website: www.york.ac.uk/accommodation
Twitter: @UoYAccomm
Facebook: UoYAccomm

Couples and family accommodation

Most of our rooms are for single occupancy, but we have some accommodation available for students wishing to live with their partner and/or children. This accommodation is not covered by our guarantee, but we are able to help most early applicants who have priority under our allocation policy, available to view on our website.

Travel and parking

It is easy to get around the University on foot or by bike, and there are great bus links across campus and into the city centre, so we ask our students to leave their cars at home. With the exception of Halifax College, which has some parking spaces available for residents, only students with a disability are eligible to park on campus.

Private sector accommodation

If you would prefer to live in the private sector, there is plenty of accommodation available to rent in easy walking distance to the University.

We hold yearly ‘Find a Housemate’ events with the Graduate Students’ Association, and we can provide advice to help you find a suitable home in York.

Accommodation guarantee

You are guaranteed accommodation if you fulfil all of these criteria:

- you are paying overseas tuition fees
- you are a new full-time student applying for a single room for the full academic year
- you accept an unconditional course place and
- you apply for accommodation by our guarantee deadline date.

You will also be guaranteed accommodation for each year of your course if you apply by the deadline date advertised each year.

Even if you are a UK/EU student or do not fulfil all the above criteria, we encourage you to apply as we can usually help most students with accommodation on or off campus.
This section tells you about the costs of being a postgraduate student at the University of York and the financial support available to you. There are a number of funding streams you can apply for to help with the cost of living and course fees. Details often depend on whether you are a UK, EU or overseas student, on your personal circumstances and on the programme you plan to study, but we hope this overview will be a useful starting point.

### University scholarships

#### Postgraduate Scholarships Scheme

The University funds between £3m and £4m worth of scholarships each year through a variety of scholarship schemes. These include PhD teaching scholarships which provide good training for those interested in an academic career.

Several different scholarships are available. Some cover the tuition fees only, while others also include a stipend for living costs.

Scholarship applications should be made separately to applications for a place of study. The closing date for funding applications varies.

Complete details of scholarships can be found at [www.york.ac.uk/study/postgraduate/fees-funding/scholarships](http://www.york.ac.uk/study/postgraduate/fees-funding/scholarships).

### Overseas scholarships

Some scholarships are provided specifically for overseas students. These include:

- Overseas Research Scholarships, for PhD candidates only (full tuition and £5,000 yearly stipend)
- Scholarships for Overseas Students, for undergraduate and postgraduate applicants (reduction of tuition fees for each year of study).

The deadline for applications is usually 30 April. For further details visit [www.york.ac.uk/study/international/fees-funding/scholarships](http://www.york.ac.uk/study/international/fees-funding/scholarships) or email international@york.ac.uk.

### Departmental scholarships

Many departments have funds available to assist postgraduate students. Details of awards vary and may be found in this prospectus, or by contacting the Department.

For further information visit [www.york.ac.uk/study/postgraduate/fees-funding/scholarships](http://www.york.ac.uk/study/postgraduate/fees-funding/scholarships).

### Research Council awards

The main external sources of financial support for UK and EU postgraduate students in the fields of study available at York are the scholarships offered by the central government Research Councils: the Arts and Humanities Research Council (AHRC), the Biotechnology and Biological Sciences Research Council (BBSRC), the Economic and Social Research Council (ESRC), the Engineering and Physical Sciences Research Council (EPSRC), the Medical Research Council (MRC), the Natural Environment Research Council (NERC) and the Science and Technology Facilities Council (STFC).

In general, full scholarships are available only to students who are settled in the UK or are EU citizens and have been ordinarily resident in the UK. Please review the individual Research Council websites for guidelines on eligibility.
Local authorities in England and Wales do not normally provide scholarships for postgraduate study in any of the subjects available at York except for the programme leading to the Postgraduate Certificate in Education.

Students normally resident in the Isle of Man or the Channel Islands should apply directly to their respective education department.

**Arts and Humanities Research Council (AHRC)**

The AHRC offers scholarships for postgraduate study in subjects within the humanities through the White Rose College of the Arts and Humanities, a Doctoral Training Partnership of the Universities of York, Leeds and Sheffield. At York, awards may be available in the following departments and interdisciplinary subjects: Archaeology; English and Related Literature; History; History of Art; Language and Linguistic Science; Law; Music; Philosophy; Politics; PEP; Sociology; Theatre, Film and Television; Centre for Applied Human Rights; Centre for Medieval Studies; and the Centre for Women’s Studies.

One-year scholarships are available for candidates taking certain full-time MA programmes, and are awarded on a competitive basis, normally to candidates who obtain first degrees with first-class honours.

Three-year scholarships are intended to enable candidates to complete a programme of doctoral research, and are therefore awarded to candidates who are embarking on, or pursuing, PhD programmes. (Scholarships are also available for part-time PhD students.) The vast majority of these scholarships are awarded to candidates who have completed, or are following at the time of application, an initial year of postgraduate study, normally in the form of an MA programme.

All applications should be discussed with your prospective department. For more information including details of how to apply, visit www.york.ac.uk/study/postgraduate/fees-funding/scholarships/ahrc, www.ahrc.ac.uk and www.wrocah.ac.uk.

**Biotechnology and Biological Sciences Research Council (BBSRC)**

The BBSRC funds world-class bioscience research that helps to tackle major challenges such as the impact of climate change, a healthier old age, sustainable food production, land use and energy production. At York BBSRC studentship funding is available under a number of different schemes, including funding as part of the BBSRC White Rose Doctoral Training Partnership in Mechanistic Biology. BBSRC awards are available in the Departments of Biology and Chemistry. Further information is available from department websites and via the Doctoral Training Partnership website.

The BBSRC White Rose Doctoral Training Partnership in Mechanistic Biology brings together the research of the world-class molecular and cellular bioscience centres at the White Rose Universities of Leeds, Sheffield and York. For more information visit www.whiterose-mechanisticbiology-dtp.ac.uk and www.york.ac.uk/biology/postgraduate/dtpbbsrc.

**Economic and Social Research Council (ESRC)**

The ESRC provides scholarships for research degrees in the social sciences for study at York via the White Rose ESRC Doctoral Training Centre. Studentships are tenable in the York Management School, the Centre for Women’s Studies, the Post-war Reconstruction and Development Unit and the Departments of Economics and Related Studies, Education, Environment, Health Sciences, Language and Linguistics, Law, Politics, Psychology, Social Policy and Social Work, and Sociology. For these studentships, a candidate can opt to undertake a Masters and research degree or only a research degree if they already have a Masters in the appropriate area.

For more information visit www.york.ac.uk/study/postgraduate/fees-funding/scholarships/esrc and www.wrdtc.ac.uk.

**Engineering and Physical Sciences Research Council (EPSRC)**

The EPSRC supports excellent, long-term research and high quality postgraduate training in order to contribute to the economic competitiveness of the UK and the quality of life of its people. At York EPSRC studentship funding is available under a number of different schemes which include funding as part of two EPSRC Centres for Doctoral Training. EPSRC awards are available in the Departments of Chemistry, Computer Science, Electronics, Mathematics and Physics. Further information is available from department websites and via the Centres for Doctoral Training websites.

The EPSRC Centre for Doctoral Training in Intelligent Games and Games Intelligence (IGGI) is a collaboration between the University of York, the University of Essex and Goldsmiths College, University of London. It will train the next generation of researchers, designers, developers and entrepreneurs in digital games. For more information visit www.iggi.org.uk.

The EPSRC Centre for Doctoral Training in the Science and Technology of Fusion Energy provides training from world-leading experts in a range of fusion-relevant disciplines: materials science, plasma physics, nuclear physics, technology, laser physics and instrumentation. For more information visit www.york.ac.uk/physics/postgraduate/fusion-cdt.

**Medical Research Council (MRC)**

The MRC supports research across the biomedical spectrum, from fundamental lab-based science to clinical trials, and in all major disease areas. The MRC funds postgraduate research training through studentships. At York, awards may typically be available in the Departments of Biology, Chemistry, Health Sciences and Psychology, and the Hull York Medical School. Potential students should contact departments directly and further information is available from department websites.

“**The Masters Opportunity Scholarship has given me the opportunity to realise my dream of entering the film-making industry. The financial aid has enabled me to continue my studies and specialise my skills, opening up endless possibilities for personal and career development. As a student with attention deficit disorder and dyslexia, this course and university have made me more confident to pursue my career ambitions and sparked my determination to succeed in my field.**”

HEATHER, MA IN POSTPRODUCTION WITH VISUAL EFFECTS, DEPARTMENT OF THEATRE, FILM AND TELEVISION
Natural Environment Research Council (NERC)
The NERC is the UK’s largest funder of independent environmental science, training and innovation, delivered through universities and research centres. At York, NERC studentship funding is available under a number of different schemes which include funding as part of two new NERC doctoral training partnerships. Awards are available in the Departments of Archaeology, Biology, Chemistry and Environment. Further information is available from department websites and via the Doctoral Training Partnership websites.

The NERC Doctoral Training Partnership in Adapting to the Challenges of a Changing Environment (ACCE) is a partnership between the Universities of Sheffield, Liverpool and York and the NERC’s Centre for Ecology and Hydrology (CEH), providing doctoral training in the biological components of the natural environment and related disciplines. For more information visit www.acce.group.shef.ac.uk and www.york.ac.uk/biology/postgraduate/nercdtp.

The Leeds York NERC Doctoral Training Partnership encompasses research activities within three broad themes: the science of the Earth’s atmosphere, geosphere and biosphere and is a partnership between the Universities of Leeds and York. For more information visit www.nercdtp.leeds.ac.uk.

Science and Technology Facilities Council (STFC)
The STFC supports university-based research, innovation and skills development in astronomy, particle physics, nuclear physics and space science. STFC postgraduate studentships are awarded to enable promising scientists and engineers to continue training beyond a first degree. At York, studentships are available in the Department of Physics. Potential students should contact the Department directly and more information is available from the department website.

Other sources of funding

Chevening Awards
These are prestigious awards for overseas students who wish to study in the UK and are funded by the UK’s Foreign and Commonwealth Office and administered by the British Council. Most awards are for one-year programmes. More information is available at www.chevening.org.

Career Development Loans
Some students take out Career Development Loans to help finance their studies. They are available through an arrangement between the National Careers Service and three high street banks. Only UK residents are eligible. More information is available at www.lifelonglearning.co.uk and www.gov.uk/career-development-loans.

US Direct Loans
If you are a US citizen, you can apply for Direct Loans in support of your studies at York. Students will need to complete both a FAFSA application and a University of York Direct Loans application. More details can be found at www.york.ac.uk/students/housing-and-money/financial-support/funding/us-students.

Wellcome Trust
The Wellcome Trust supports the brightest minds in biomedical research and the medical humanities, with the aim of improving human and animal health. The Wellcome Trust awards student funding to universities to support the most promising students to undertake in-depth postgraduate training. At York, Wellcome Trust funding is available for studentships as part of the four-year training programme Combating Infectious Disease: Computational Approaches in Translational Science (CIDCATS). For further information visit www.york.ac.uk/biology/postgraduate/cidcats.

Fees
For the 2016/17 academic year, standard fees for full-time programmes are:

Home/EU students
- Taught Masters programmes
  Higher rate £7,000
  Lower rate £6,650
- Research programmes £4,165
  (subject to RCUK confirmation)

Overseas students
- Taught Masters programmes
  Higher rate £20,100
  Lower rate £15,680
- Research programmes
  Higher rate £19,050
  Lower rate £14,800

Where higher and lower rates are shown, the lower rate is generally applied to non-laboratory subjects and the higher rate to laboratory subjects. Non-standard fees are charged for some programmes. You are strongly advised to check the website for details of fees for specific programmes: www.york.ac.uk/study/postgraduate/fees-funding.

Please note that ‘overseas’ in this context can refer to domicile not nationality, and that EU nationals (including UK nationals) domiciled outside the EU may be considered as overseas for fee purposes. For guidance on how your fee status is determined please refer to UKCISA guidelines: www.ukcisa.org.uk/international-students/fees--finance/Home-or-overseas-fees.
If you would like further guidance before making an application, please contact the Postgraduate Admissions team.

Students from the UK and other EU countries registered for the Postgraduate Certificate in Education will normally be eligible for grants and loans to cover the course fee (£9,000 in 2016/17).

Details of the fees for students studying on a part–time or distance–learning basis and non–standard fees are available at www.york.ac.uk/study/postgraduate/fees–funding.

Fees quoted are for one year of study only, and are subject to increase in subsequent years. Increases for students continuing studies on the same programme are currently capped at two per cent. Tuition fees are due at the beginning of each year of study.

College fee
A college fee of £10 per year (up to a maximum of £30 for a course lasting three years or more) is payable by all full–time students.

York Graduate Loyalty Discount
We offer a five per cent discount in postgraduate Masters tuition fees for UK and EU graduates who have an undergraduate degree from the University of York. For further details about eligibility criteria, please refer to www.york.ac.uk/study/postgraduate/fees–funding/graduate–discount.

Living costs
Living costs vary among students depending on your personal choice and lifestyle. Make sure you also have sufficient funds to cover food, transport, telephone costs, socialising and study materials such as books and photocopying.

For details of accommodation costs, see page 27. Note that if you plan to live in private accommodation, rents do not usually include utilities. You will need to allow extra for utility bills, internet and TV packages.

Transport costs are low: most students can travel from their accommodation to classes on foot or by bike and it is only a short journey by bus to the city centre.

A good range of second–hand bookshops, student nights at most York clubs and discounts at many local shops also help keep your costs down.

When you are comparing costs between different universities, make sure that you are comparing like with like: our sample budgets are comprehensive and designed to cover all likely costs for comfortable living at York. Note also that your costs will, of course, be higher if you are bringing a spouse and/or dependants with you. Examples of comprehensive student budgets can be found at www.york.ac.uk/students/housing–and–money/financial–support/budgeting/budgets.

Self–financing students may be required to provide documentary evidence, for example in the form of a bank statement, banker’s letter or sponsor’s letter, to show that they have adequate funds to meet their tuition fee.

Finding a part–time job
Many students help fund their studies with a part–time job. While your main reason for taking on part–time work might be to earn money, working can also develop your skills and give you valuable experience.

The Careers website offers information to help you find a part–time or temporary job, but your best starting point is the Careers Gateway where we advertise all vacancies sent to us by employers.

International students should consult our immigration advice pages at www.york.ac.uk/students/support/international/immigration for information about working during your studies.
Applying to York

When you apply to the University of York your application is processed by the Postgraduate Admissions team. You can contact the team at any time before or during the application process if you need any help and advice.

How to apply

You can apply for taught courses and research degrees using our online application system called Select.

Step 1: Find a course.
Use our Course Finder at www.york.ac.uk/study/postgraduate.

Step 2: Check that you meet the entry requirements.
Taught courses: typically you would need at least the equivalent of a UK upper second-class honours degree, however some courses will accept lower second-class honours degrees. Actual requirements will vary by course.

Research degrees: for a research degree, such as an MPhil or a PhD, you would normally need an upper second-class honours degree (or equivalent). We recommend that you visit departmental research pages and contact potential supervisors to discuss the research areas you are interested in.

Step 3: Check the application deadlines.
In most cases applications can be submitted throughout the year; however we recommend that you apply as early as possible due to competition for places. If you are applying for a scholarship (particularly international applicants) you should also check those application deadlines.

Some programmes do have their own application deadline. Further details about programmes operating deadlines are available at www.york.ac.uk/study/postgraduate/apply/round-dates.

Step 4: Apply online at www.york.ac.uk/study/postgraduate/apply.
Our online application system will confirm which supporting documents and information you need to provide in support of your application for your chosen programme of study. You do not need to complete your application all at once; you can start it, save it, and finish it later.

Step 5: After you apply.
Once we have received your application, we will acknowledge receipt of it by email. You will also be given access to our applicant portal, You@York, where you can track the progress of your application, upload supporting information and documents, and update your personal details.

What to include

All applications should be accompanied by the documents and information listed below.

Transcripts/degree certificates
If you have already completed a previous degree or degrees, whether at a UK or an overseas university, you should include copies of certificates and formal transcripts of your academic record, providing full details of the degrees, classes or grades you have obtained and the units you have taken. If these documents are not in English, you should arrange for them to be accompanied by a formal certified translation into English.

If you are still registered for, or are awaiting the outcome of, another undergraduate or postgraduate programme, it will be helpful to selectors if you can provide an interim transcript which includes your marks to date. Any offer you are made will be subject to completion of the programme concerned at a prescribed level.

References
The reports the University receives from academic referees are a crucial element of the selection process for graduate study. It is therefore in your own interests to ensure that your referees are both appropriate and informative. Applicants are required to supply the names and contact details of two academic referees with their application.

Written work
Some programmes of study also require a sample of recent written work. For further details please see www.york.ac.uk/study/postgraduate/apply/written-work.

Research proposal
If you are applying for a research degree, you should provide an outline of your proposed research topic and academic interests. It is also a useful exercise to consult the relevant departmental research pages in order to identify a potential
academic supervisor or research group. For further details, please see www.york.ac.uk/study/postgraduate/apply/research-proposal-guidance.

Finance
You must make satisfactory arrangements before entry for your financial support, both for tuition fees and for living expenses, for the whole period of your proposed programme at the University. For guidance on these costs see pages 30–31.

English language
For applicants whose first language is not English, each department sets a required level of English language proficiency which must normally be evidenced with a score in a recognised English language test. The most frequently offered test is IELTS but other tests, for example the Pearson Test of English (PTE), Cambridge Advanced English (CAE) and Cambridge Proficiency in English (CPE) are also acceptable.

You can see the IELTS requirement for each department on the first page of the department’s entry in this prospectus or see www.york.ac.uk/postgraduate/apply/english.

Students with disabilities
The University has an explicit policy of accommodating students with disabilities. We believe that those with disabilities should have access to the full range of academic, cultural and social activities the University offers. Therefore the University will undertake all reasonable steps to meet both the general need for access and the specific needs of individuals with disabilities.

Students with disabilities, in common with all other students, are accepted by the University on the basis of academic attainment and potential to benefit from the programme they apply for. Practical problems arising from disability are a secondary consideration and only relevant if they cannot be overcome. Information regarding disability has no bearing on the academic assessment of your application.

More information about Disability Services at the University can be found on page 19.

Finding out more
There are many opportunities to find out more about the University and how to apply.

We run a series of online events during the year giving you the opportunity to put questions to our academic staff and students. You can find out about a particular programme of study or research area, how to apply, financing postgraduate study, and what student life at York is like.

Our departments run subject-specific events on campus which you can attend, or you can arrange an individual visit.

We also run a series of campus tours or you can visit at any time. A map of the campus and a self-guided tour and audio tour can be found at www.york.ac.uk/study/visit/campus-tours.

For further information on all opportunities to talk to us or visit the University, please go to www.york.ac.uk/study/postgraduate/open-days.

Postgraduate Admissions team
Tel: +44(0)1904 322142
Email: pg-admissions@york.ac.uk
Website: www.york.ac.uk/study/postgraduate
The Department of Archaeology has developed a worldwide reputation as a vibrant centre of excellence in both teaching and research. This excellence was recognised in 2011 with the award of a prestigious Queen’s Anniversary Prize for Higher and Further Education.

The Department of Archaeology was first established in 1978, and we have steadily grown to receive international recognition for our wide-ranging, innovative and outstanding teaching and research. Our teaching received a perfect score in the Quality Assurance Agency audits, and we are consistently at or near the top for student satisfaction in the National Student Survey. In the Research Excellence Framework in 2014 the Department ranked fourth nationally, and second on impact and research environment.

We have core strengths in prehistoric, medieval and historical archaeology, and we are a centre of excellence for archaeological computing, bioarchaeology, heritage management, conservation and building and landscape archaeology.

The Department occupies the King’s Manor, a fine historic building in the centre of York, a city famous for its archaeology. The King’s Manor originated in the 15th century serving the Tudors and Stuarts as a seat of government. Today the King’s Manor provides facilities – offices, classrooms and workrooms, a well-stocked library, computer and laboratory space, a common room and a refectory – for a vibrant, stimulating and friendly academic community.

The Department maintains close teaching and research links with the Centres for Medieval and Eighteenth Century Studies, the Centre for Digital Heritage and the Humanities Research Centre. Our specialist research laboratories on campus take full advantage of links with the Departments of Biology and Chemistry. Many of our staff members lead research projects in which you can get involved, and you also have access to the prestigious Archaeology Data Service, based at the King’s Manor. Numerous archaeology and heritage organisations in York and the wider region provide a variety of research and placement experience opportunities, and our postgraduates have a strong record of gaining employment in the discipline.

Your future

Archaeology Masters programmes combine arts and science with critical skills in writing, logical thinking, communication and presentation. They are an excellent choice of subject for an all-round degree. Many archaeological and heritage organisations are based in York, providing opportunities for students through formal placements or informal work experience. Alumni now work across the heritage sector, in national agencies (eg Historic England), local government and museums, and overseas.
Programmes overview

All postgraduate activities are co-ordinated through the Graduate School of Archaeology which offers a wide range of MA/MSc degrees designed to provide training in research, scholarship and professional enhancement. Research students have their own study and computing area in the Graduate School. Practical facilities include a dedicated IT suite, a laboratory for archaeological analysis and specialised drawing desks. The teaching system at York is designed to give you detailed, in-depth knowledge and training, with a flexibility that allows you to participate fully in the exciting and diverse life of our broader research community.

Our Masters programmes are available full-time over one year, or on a modular basis over two or three years. They all involve six months of taught courses (including lectures, seminars and visits) during the Autumn and Spring Terms, with training in relevant ancillary skills through practical sessions or optional placements. You will take modules specifically related to your programme during the first two terms, together with modules selected from a range on offer from other programmes, enabling you to tailor your course to meet your own academic requirements and interests. You will also choose from a variety of short research skills modules which lay the foundations for your independent research. In the second half of your course you will write, under supervision, a dissertation of up to 20,000 words on an appropriate topic.

The taught course elements are weighted at 55 per cent, and are assessed through written assignments and reports. The dissertation is weighted at 45 per cent and is submitted at the end of August. As an alternative to the usual MA/MSc route, you can study for a Diploma. After the first six months of taught courses and assessments, you complete your study in nine months by writing, under supervision, a long essay or project of no more than 5,000 words, submitted at the end of the Summer Term. A further alternative is to study for a Certificate in your chosen programme, which consists solely of taught modules, and can be completed in six months. In this model, you attend the core modules of your course in the Autumn and Spring Terms, as well as two skills modules of your choice per term.

Your background

By its very nature, Archaeology draws on the strengths of many disciplines and it has common ground in theory and practice with aspects of the humanities, sciences and social sciences. For that reason, we welcome applications from anyone with at least a 2:1 in an Archaeology degree, and also those with degrees in cognate subjects and/or relevant practical experience.

MA in the Archaeology of Buildings

This degree trains students in the theory and practice of the archaeological investigation and interpretation of historic buildings and structures in Britain and Western Europe. This programme will give you the necessary knowledge and training to produce accurate records of standing buildings, and to make archaeological analyses of them based on stratigraphic principles. Practical work and site visits play a major part in teaching.

MA in Conservation Studies

MA in Conservation Studies (Historic Buildings)

The MA in Conservation Studies is a recognised leader in international heritage conservation training and is the flagship for York’s Centre for Conservation Studies. With a focus on the built heritage, it equips students with the theoretical understanding and practical skills for developing a career in a range of heritage conservation roles.

The Conservation Studies (Historic Buildings) programme offers a specialised route for UK practitioners working towards full professional membership of the Institute of Historic Building Conservation.

Strengths of both programmes are the interaction with visiting expert practitioners, critical engagement with contemporary conservation debates, field visits and a work placement to enhance employability.

MA in Cultural Heritage Management

This degree provides the practical and intellectual foundations for anyone intending to pursue a career in the heritage sector. It can also serve as continuing professional development for people wanting to develop their heritage career or to move in a new direction. Particular strengths of the programme include contact with the profession through visiting lecturers and placements with professional organisations.

MA in Field Archaeology

This degree offers professional training at postgraduate level. You are taught through a combination of workshops, lectures and seminars, personal study and practical exercises. Opportunities for practical training are available through placement with a local archaeological organisation and project work.

MA/MSc Funerary Archaeology

This programme focuses on the different approaches to, and challenges of, studying death and burial in the past, from Prehistory onwards. Through lectures, seminars and field visits, you will explore key topics, from investigating funerary rites and interpreting the burial context, to analysing the human skeleton. To reflect the interdisciplinary nature of this masters course both an MA and MSc are offered.

MA in Historical Archaeology

This programme is designed for archaeologists, historians, anthropologists and others who wish to study the post-medieval world through its material culture and landscapes. The programme adopts a global agenda, examining wide-ranging themes such as modernity, industrialisation, capitalism and colonialism.

MA in Landscape Archaeology

This degree integrates the recording, interpretation, appreciation and conservation of archaeological landscapes in all their diversity, and helps students hone a range of practical skills relevant to the discipline. Training in both theory and method is set against a background of historic and prehistoric material from across the ages.

MA in Medieval Archaeology

This programme focuses on the study of artefacts, landscapes and buildings within the social and cultural context of medieval Britain and Western Europe. Through lectures, seminars and field visits, you will explore a wide range of methodological and theoretical approaches to medieval material culture.

MA in Mesolithic Studies

This programme offers lectures, seminars, field visits and hands-on practicals on all aspects of Mesolithic studies. In the context of the European Mesolithic, you will explore key topics such as technology, consumption practices, death and burial, plants and animals, and settlement.

MSc in Archaeological Information Systems

This degree provides a broad foundation in archaeological information systems through lectures, tutorials, practicals and a placement in archaeological computing with a local institution or project. The degree
will also help you develop vocational skills in electronic publishing, digital archiving and visualisation, and modelling.

**MSc in Bioarchaeology**

This degree is designed for those who are interested in exploring the range of biological evidence that can be used to understand the past. On this programme, you will get the opportunity to work closely with leading scholars, and participate in a range of laboratory and practical analyses based on current groundbreaking research.

**MSc in Digital Heritage**

This degree aims to train people who wish to work in digital archiving, museums and education/display and curation. It draws on existing strengths in the Department in Archaeological Information Systems and Cultural Heritage Management, while also exploring the relevance of new and mobile technologies in creating and consuming heritage information. You will have the opportunity for a work experience placement, and also benefit from the on-site presence of the Archaeology Data Service, which has been the UK digital archive for heritage data since 1997.

**MSc in Early Prehistory**

In this programme you will consider the origins of ‘humanity’ from our earliest ancestors to the dawn of agriculture, drawing on archaeological evidence and cognitive and social perspectives to address the question of what makes us human. Students are encouraged to make use of new and creative approaches and to develop their own perspectives on key issues.

**MSc in Human Anatomy and Evolution**

For details of this programme, offered by the Hull York Medical School, please see the entry for the Medical School on page 110.

**MSc in Zooarchaeology**

This degree focuses on the theory and methods used to analyse vertebrate animal remains in the context of archaeology, and provides training in relevant skills. The programme explores the ways we can use animal remains to model past human ecology, to assess the role of animals in human lives, and to answer wider palaeoenvironmental questions on global and local scales.

**MA in Archaeological Studies (by research)**

This research-driven MA can be taken in any subject area, and is full-time for one year or on a modular or part-time basis over two years. Candidates are required to follow a ‘tailor-made’ tutorial programme to ensure that they are properly equipped to pursue their research topic. Candidates are assessed on submission of a thesis of up to 30,000 words.

**MPhil/PhD research degrees**

Candidates for MPhil/PhD degrees should be academically ready to embark directly upon their research programme. You will normally be expected to hold at least a 2:1 or its equivalent in your first degree, as well as an appropriate MA/MSc degree. The degrees of MPhil and PhD can be taken on a full-time basis over two or three years respectively, or on a part-time basis over four or six years respectively. Research students will receive regular supervision throughout their enrolment, and are also supported by a Thesis Advisory Panel which meets regularly. Assessment is by a thesis of no more than 60,000 words for an MPhil and no more than 90,000 words for a PhD.

Applications are welcomed from candidates who wish to pursue research on any clearly defined topic related to the Department’s research interests and the expertise of our staff. Our research strategy currently includes:

- Archaeological information systems
- Bioarchaeology
- Coastal and submerged prehistory
- Conservation and heritage
- Early prehistory
- Landscape and society

**Available funding**

The Department has a number of bursaries available to support home and overseas Masters students; and several Arts and Humanities Research Council (AHRC) and White Rose College of Arts and Humanities (WRoCAH) grants for home/EU Masters and PhD students. Details of these bursaries, and of other occasional studentships, can be found on our website www.york.ac.uk/archaeology/pg-funding. Detailed advice on applications for AHRC and related funding for postgraduate studies can be obtained through consultation with the Department.

The Weald & Downland Open Air Museum in West Sussex is well known for its collection of historic, carefully restored buildings, ranging from medieval to Victorian. A stimulating and varied programme of courses is taught by the best researchers and craftspeople in their fields, including two MSc programmes now validated by the University of York:

- MSc in Building Conservation
- MSc in Timber Building Conservation

For more information contact Diana Rowsell, at headoflearning@wealddown.co.uk, +44 (0)1243 811464 and www.wealddown.co.uk.

“I was first drawn to heritage studies through my MA in Cultural Heritage Management here at York. My PhD offers an exciting opportunity to further feed theory into practice within the heritage sector. Through my City of York Council placement and community work I’ve enjoyed establishing a mix of professional and non-professional contacts. I also value the constructive conversations within the Department through chats, forums and social media.”

KATRINA, PhD IN HERITAGE, MANAGEMENT AND COMMUNITIES

The Department has many other honorary fellows and associates who are practitioners in archaeology and conservation and who provide additional expertise, support and links to the professions. You can see our full staff list at www.york.ac.uk/archaeology/staff.
The Department of Biology at the University of York is one of the leading centres for biological teaching and research in the UK. We teach degree programmes and undertake research across the whole spectrum of modern biology, from molecular genetics and biochemistry to ecology. We have an integrated approach to Biology with no barriers between disciplines. Our cross-disciplinary activity has increased in recent years and our cutting-edge integrative approach aims for a systems-level understanding of biological research. The Department contains 70 principal investigators across all disciplines of Biology, supported by current grants totalling £55m. We are committed to excellence with impact in our research, and to ensuring that this same research is used to inform our teaching and inspire students. The 2014 Research Excellence Framework ranked us first in the UK for research impact outside academia. Our research has had major influence on environmental policy, industry and health. This demonstrates our strength across the biological sciences, from ecology to biochemistry, biotechnology and biomedical sciences.

The Department of Biology is one of the UK’s most highly ranked biological sciences departments for research and teaching. With 70 academic staff, we cover the spectrum of contemporary biological sciences from molecular aspects of cancer to field ecology.

We occupy a single set of purpose-built teaching and research laboratories built in 2002 with a £21.6m JIF award from the BBSRC. The Department includes the innovative Technology Facility, housing £9m of state-of-the-art equipment providing services in imaging, proteomics, protein interaction, bioinformatics and DNA/RNA analysis. Each laboratory in the Technology Facility is headed by a specialist who provides access to training in the use of this state-of-the-art technology.

Around 50 students complete a Masters programme in the Department each year. We currently have 110 PhD students and approximately 40 students start their PhD each year in the Department. Students receive extensive graduate training in research and transferable skills. Most of our postgraduate training is research-oriented and we offer a diverse set of programmes leading to a higher degree.

The Department has an Athena SWAN Gold award for its commitment to women in science, and values equally the talents and contributions of all students and staff. Biology at York has been consistently ranked in the top five in the UK for teaching excellence in all major league tables.

Our skills training helps our high employability success rate for all of our graduates. Graduates have gone on to successful positions in the companies where they have completed their projects, or in other research institutions. A large number of our MSc graduates go on to PhDs (around 50 per cent). We have a specific Departmental Training and Careers Officer, who gives one-to-one support and guidance.
Programmes overview

Each programme incorporates a Business and Transferable Skills component that will enable you to develop a strong portfolio that is essential both to complete the programme successfully and to enhance future career prospects.

MSc in Industrial Biotechnology

This programme prepares students for research and industry-based careers in biotechnology research and development. You will gain research experience and interdisciplinary training in state-of-the-art biomolecular and biochemical techniques. The programme is based in the Department of Biology, which is one of the UK’s top-ranked biological sciences departments for research, teaching and impact. Staff in the Centre for Novel Agriculture Products (CNAP) and Centre for Immunology and Infection (CII) contribute teaching and research opportunities.

Key features

- Integrated training in modern recombinant DNA, fermentation and bioreactor technology
- Develop the skills to support a research or industry-based career across any area of modern biotechnology.

Taught modules

- Industrial Biotechnology
- Data Analysis and Programming in the Biosciences
- Optional modules include: Biocatalysis, Cell and Tissue Engineering, Bioremediation.

Research projects

- Independent study module carried out as a placement either within the University or as an external placement
- Recent external placement destinations include MicroLab Devices, Leeds; Cancer Research UK, London; Computomics GmbH & Co, Tübingen; and Forsite Diagnostics Ltd, York.

Research and transferable skills

- Appreciate the role of science in industry, eg commerce, IP issues and ethics
- Data analysis programming and professional skills module.

MSc/MPhil/PhD research degrees

The MSc, MPhil and PhD research degrees are higher degrees awarded for a thesis presenting original research that is a significant contribution to scientific knowledge. In the UK, a thesis is judged by two examiners for MPhil/PhD interviewing the student by viva. The interview is based upon the submitted thesis document. The MSc is expected to be completed in one year, the MPhil in two years and the PhD in three to four years. York Biology currently has 110 PhD students and we take very good care of them.

As a research student at York you can expect:

- a supervisor directing your research and training
- regular mandated meetings and supervision with your supervisor
- a training advisory panel of two other members of staff to monitor progress and offer advice
- a progress meeting with your supervisor every two months

Your background

These programmes are suitable for students who have a good honours degree (First or 2:1 or equivalent) in any biological science subject, although there are also opportunities for students with backgrounds in other disciplines that may be appropriate to each individual programme.

Doctoral Training Programmes

In addition to individual PhD and MSc by Research projects, we have three large Doctoral Training Programmes (DTPs), funded by the Biotechnology and Biological Sciences Research Council (BBSRC), the Natural Environment Research Council (NERC) and the biomedical research charity Wellcome Trust, which recruit a number of research students each year.

PhD in Adapting to the Challenges of a Changing Environment (ACCE) – a NERC Doctoral Training Partnership

This prestigious NERC-funded doctoral training programme brings together the very best in environmental, ecological and evolutionary research across the Universities of York, Sheffield and Liverpool, together with the Centre for Ecology and Hydrology (CEH). Students will benefit from a PhD training programme that has interdisciplinary collaboration at its core. The aim is to produce multi-skilled researchers equipped to tackle cutting-edge environmental science of global significance, embedded within a unique, supportive training environment. At York, the NERC partnership brings together researchers from the Departments of Biology, Environment, Archaeology and Chemistry. All projects are co-supervised, most of them with supervisors in different institutions, in order to foster innovative science, collegiality and breadth of experience.

This fully funded PhD programme in ACCE offers projects aligned with the grand challenges in environmental research: securing ecosystem services and environmental resources; predicting and mitigating impacts of climate change; and

“The most valuable aspects of my programme are the emphasis on interdisciplinary approaches and the support to broaden my skill set. My PhD involves several departments collaborating on a variety of projects. The group lab project in the first term allowed me to develop new lab skills, and in my lab rotation I constructed a computational model for the first time. I can now pursue any research project that interests me, knowing the resources are there to help me.”

FRANCES, PhD IN BIOLOGY
understanding the dynamics of biodiversity and mechanisms of evolutionary change.

Around eight studentships are available each year and cover a tax-free annual stipend at the standard Research Council rate (£14,002 for 2015/16), research costs, and tuition fees at the UK/EU rate. The studentships are only available to UK and EU students who meet the UK residency requirements. Further information about eligibility for NERC studentships can be found at www.nerc.ac.uk/funding/application/howtoapply/forms/dtg-faq-students.pdf.

Students with, or expecting to gain, at least an upper second-class honours degree, or equivalent, are invited to apply. The interdisciplinary nature of this programme means that we welcome applications from students with backgrounds in any relevant subject that provides the necessary skills, knowledge and experience for the DTP, including environmental, biological, chemical, mathematical, physical and social sciences.

PhD in Combating Infectious Disease: Computational Approaches in Translational Science (CIDCATS) – a Wellcome Trust Doctoral Training Programme

Infectious disease is a global threat to human health – parasitic, bacterial and viral diseases represent six of the ten leading causes of mortality worldwide. New thinking, approaches and tools are required for a better understanding of the complexity of disease processes at the molecular, cellular and organismal level.

CIDCATS is a doctoral training programme designed to provide the skills and experience required for the integrative interdisciplinary research necessary to combat infectious disease.

It is a four-year programme, with an initial year of research training (foundation stage), followed by three years of dedicated research on a specific interdisciplinary project (PhD stage). The programme is aimed at exceptional students (including those with a strong background in a non-biological science, engineering or mathematics) with an interest on impacting on infectious disease through interdisciplinary research. Studentships cover a generous tax-free stipend (around £20,000 per year), research costs, and tuition fees. UK, EU and international students from outside the European Union are welcome to apply. Students with, or expecting to gain, at least an upper second-class honours degree, or equivalent, are invited to apply.

PhD in Mechanistic Biology – a BBSRC White Rose Doctoral Training Partnership

This prestigious BBSRC fully funded Doctoral Training Partnership brings together the very best molecular, chemical and cellular bioscience research across the White Rose Consortium of Universities (Leeds, Sheffield and York) which maps onto the research themes of the BBSRC. Students will benefit from a regional programme that has interdisciplinary collaboration at its core. The aim is to enable students to develop a range of research skills in biological and biochemical areas as well as equip them with core mathematical, data analysis and generic professional skills that are necessary for bioscience research in the coming decades. At York, the White Rose Partnership brings together researchers from the Departments of Biology and Chemistry.

Available funding

Information on funding and studentships can be found on our website at www.york.ac.uk/biology/postgraduate.

Staff list

Professor and Head of Department

Ian A Graham, PhD (Edinburgh) - Arabidopsis sugar-regulated control of storage oil breakdown

Professors

Ian Bancroft, PhD (Lancaster) - Plant genome evolution and marker–trait association
Michael Brockhurst, PhD (Oxford) - Experimental evolution and evolutionary ecology of pathogenic microbes
Neil Bruce, PhD (Kent) - Microbial degradation of cocaine
Nia Bryant, PhD (Edinburgh) - Intracellular membrane traffic
Seth Davis, PhD (Wisconsin) - Plant circadian clocks
Calvin Dytham, PhD (Leeds) - Interaction modelling on environmental gradients
Sue Hartley, PhD (York) - Plant and herbivore interaction
Jane Hill, PhD (Bangor) - Impacts of climate change on biodiversity
Paul Kaye, PhD (London) - Effector and regulatory function of NK cells in experimental leishmaniasis
Charles Lacey, MD (London) - Genitourinary medicine
Mark Leake, PhD (London) - Single-molecule cellular biophysics
Peter McGlynn, PhD (Sheffield) - DNA replication, repair and recombination
Simon McQueen-Mason, PhD (Penn State) - Novel lignocellulose degrading enzymes from the marine environment
Norman Maitland, PhD (Birmingham) - Human prostate carcinoma
Jeremy Mottram, PhD (Glasgow) - Molecular and cell biology of Leishmania
Jennifer Potts, PhD (Sydney) - Bacterial fibronectin-binding proteins
Antal Rot, PhD (Budapest) - Pathophysiological roles of atypical chemokine receptors
Deborah Smith OBE, PhD (Southampton) - Functional genomics of Leishmania species
Maggie Smith, PhD (Bristol) - Molecular genetics of the antibiotic producing bacteria, Streptomyces and their bacteriophages
Jenny Southgate, PhD (Leeds) - Calcium signalling and sensory function in bladder urothelium
Antal Rot, PhD (Budapest) - Pathophysiological roles of atypical chemokine receptors
Deborah Smith OBE, PhD (Southampton) - Functional genomics of Leishmania species
Maggie Smith, PhD (Bristol) - Molecular genetics of the antibiotic producing bacteria, Streptomyces and their bacteriophages
Jenny Southgate, PhD (Leeds) - Calcium signalling and sensory function in bladder urothelium

Readers

Dawn Coverley, PhD (London) - Analysis of Ciz1 function
Dan Franks, PhD (Leeds) - Modelling the co-evolution of pathogens and aggregation in animal groups
Paul Genever, PhD (Leeds) - Stem cell biology
Angela Hodge, PhD (Aberdeen) - Friend or foe? Can plants tell the difference between their own and other plant roots?
Harv Isaacs, PhD (Open) - Functional characterisation of targets of the FGF signalling pathway
Frans Maathuis, PhD (Groningen) - Plant nutrition and stress
James Moir, PhD (Oxford) - Respiration in bacterial pathogen Neisseria meningitides
Jon Pitchford, PhD (Leeds) - Mathematical ecology; stochastic processes; dynamical systems; uncertainty
Betsy Pownall, PhD (Virginia) - Vertebrate developmental biology
Marjan van der Woude, PhD (FU Amsterdam) - Molecular mechanisms of bacterial pathogenesis

Senior Lecturers

Daniella Barilla, PhD (Pavia) - Genome segregation in bacteria and archaea
Leo Caves, DPhil (York) - Computational biology: simulation and analysis of complex biosystems
James Chong, PhD (Imperial Cancer Research Fund) - Understanding proliferation in methanogens
Mark Coles, PhD (Berkeley) - Microengineering artificial lymph nodes
Gareth Evans, PhD (Dundee) - Src tyrosine kinases; cAMP signalling in cerebellar plasticity
Allison Green, PhD (St Andrews) - How the immune system regulates autoaggressive cells
Thorunn Helgason, PhD (Edinburgh) - Diversity and host specificity of Arbuscular mycorrhizas
Louise Jones, PhD (Leicester) - Anti-viral small RNA pathways in plants
Fabiola Martin, MD (Imperial) - Mother–child transmission of HIV
Peter Mayhew, PhD (London) - Evolutionary explanations for insect diversity
Gavin Thomas, PhD (Birmingham) - Bacterial solute transporters and systems biology
Dani Ungar, PhD (Frankfurt) - Regulation of intra-Golgi vesicle transport
Jamie Wood, PhD (Imperial) - Evolutionary modelling of bird flocking and predator–prey interactions

Lecturers

Christoph Baumann, PhD (Minnesota) - Single molecule biophysics of DNA–dependent molecular machines
Colin Beale, PhD (Glasgow) - Biology of species range shifts in birds
Gonzalo Blanco, PhD (Seville) - Neuromuscular disease and muscle hypertrophy
Will Brackenbury, PhD (Imperial) - Voltage-gated sodium channels and cell migration
Sangeeta Chawla, PhD (Cambridge) - Regulation of transcription factors during synaptic plasticity
Kanchon Dasmahapatra, PhD (Cambridge) - Speciation ecology in tropical butterflies
Chris Elliott, PhD (Oxford) - Parkinson’s disease modelled in Drosophila
Julia Ferrari, PhD (London) - Plant herbivore interactions; evolution of speciation
Ville–Petri Friman, PhD (Helsinki) - Experimental microbial evolution
Darren Goffin, PhD (UCL) - Epigenetic control of brain function in health and disease
Mike Haydon, PhD (Melbourne) - Sugar signalling and cell wall signalling in plants
Ian Hitchcock, PhD (York) - Haematopoiesis and haematological malignancies
Marika Kullberg, PhD (Stockholm) - Intestinal T regulatory (Treg) cells
Dimitris Lagos, PhD (Sheffield) - RNA binding and expression
Michael Plevin, PhD (UCL) - Structural biology of transient biomolecular interactions
Paul Pryor, PhD (Bath) - Phagolysosome biogenesis
Pegine Walrad, PhD (Stony Brook) - Developmental regulators of infectious Leishmania

Research Fellow

Elva Robinson, PhD (Sheffield) - Social insect behaviour
The Department of Chemistry is one of the leading Chemistry departments in the UK, with a large and active research school. Excellent facilities and consistently high standards of teaching and research offer a diverse range of opportunities to equip you with the skills for your future career.

The Graduate School comprises around 50 research-active staff and over 150 graduate students from around the world studying for PhDs, MSc (by research) and taught Masters. In the 2014 Research Excellence Framework assessment, 94 per cent of the Department’s research activity was rated as ‘world-leading’ or ‘internationally excellent’.

The research carried out in the Department covers a broad spectrum across all the major fields of chemistry. Particular expertise is available in inorganic, organic, physical, analytical, environmental and green chemistry, energy research, atmospheric chemistry, materials, and structural biology. The quality of our research and teaching has been recognised by numerous awards.

The University recently initiated a £29m redevelopment of the Department of Chemistry. In 2012 the second stage of the Dorothy Hodgkin Building provided new facilities for 100 researchers. In 2014, state-of-the-art teaching facilities and the Green Chemistry Centre of Excellence opened. The Wolfson Atmospheric Chemistry Laboratory opened in 2013. The Centre of Excellence in Mass Spectrometry and the Centre for Magnetic Resonance provide advanced support for multidisciplinary research, as does the Centre for Hyperpolarisation in Magnetic Resonance Imaging which opened in 2012.

The Department encourages an interdisciplinary and collegiate approach to research, with collaborative projects offered across the discipline. Chemistry academic staff work closely with those from other departments, and as a Chemistry PhD student you may have the opportunity to carry out cross-departmental research. The Department also has strong links with industry and many students have the opportunity to work closely with chemical companies during their studies.

Chemistry at York is ranked in the top five in the Guardian (2016), confirming York’s position as one of the leading Chemistry departments in the UK. The Department was the first to be awarded an Athena SWAN Gold award for its commitment to women in science, and values equally the talents and contribution of all students and staff. The Chemical InterActions society promotes international integration.

Your future

We offer a comprehensive programme of career and development training and industrially sponsored research projects which can lead directly to employment. Our alumni have gone into academia, industry, government and NGOs, teaching and a range of other careers.
Programmes overview
Our research degree programmes comprise a three- or four-year PhD, a two-year MPhil or one-year MSc (by research) qualification. It is also possible to study part-time. You will undertake a research project in your chosen area and the award of the relevant degree is recommended following successful examination of your thesis. You will undertake an integrated cohort-based training programme throughout your studies to complement your research and develop skills for future employment.

The taught Masters programme comprises four taught modules and a research project. Taught Masters degrees are studied over one year.

MSc in Green Chemistry and Sustainable Industrial Technology
This innovative taught Masters programme is designed to equip you with the necessary skills in green chemistry and clean chemical technology to prepare you for a range of different careers in research, process development, environmental services, manufacturing, law, consultancy and government.

Taught by leading academics within the Department of Chemistry as well as external experts from other academic institutions and industry, the teaching component of the course is delivered via a mix of lectures, workshops, seminars and practical work. You will learn about the key principles of green chemistry and the importance of sustainable technology in a variety of areas. Topics include clean technology, energy efficiency, renewable resources, intellectual property, and the commercialisation of science. You will have the opportunity to work both on your own and within small groups on a variety of assignments, enhancing not just your knowledge of green chemistry, but also your transferable skills. Assessment methods include a closed examination, written assignments, presentations, posters and practical work.

The substantial research project often involves collaboration with industrial organisations and provides an opportunity to work on real-life challenges faced by companies when developing environmentally friendly and sustainable products and processes. You will be able to choose from a range of project areas in order to carry out research in your area of interest, in conjunction with larger research projects that are currently taking place within the Green Chemistry Centre.

You should normally have, or expect to receive, a 2:2 or equivalent in Chemistry or a related discipline.

Available funding
MSc Bursaries contribute towards tuition fees for students who pay fees at the ‘home’ rate. The Bridge Scholarship offers £5,000 towards living expenses and is open to home and international applicants. All awards will be made on the basis of academic merit and applicants should expect to achieve the equivalent of an upper second- or first-class degree. Please see our website for information on how to apply, or email chemgrad@york.ac.uk.

MSc (by research)
The MSc (by research) programme is awarded on successful examination of a thesis based on a research project. The MSc takes one year full-time or two years part-time, with a further three months to write your thesis.

You will complete a research project supervised by a member of academic staff.

“My love understanding the impact and wider applicability of chemistry research. I’ve had the chance to experience many facets of the subject and to integrate approaches from different disciplines into my research, from enzymology to policy. I’ve met people from a range of disciplines, and the Department has helped me to make the most of this network and get my initiative of a cross-departmental sustainability group off the ground. It has given me increased confidence in my career potential.”

GIULIA, PhD IN CHEMISTRY

PhD/MPhil research degrees
The PhD and the MPhil qualifications are awarded on successful examination of a thesis based on a research project. The full-time length of the MPhil programme is two years and the standard period for the PhD programme is three to four years. Part-time study is also available.

Your personal supervisor is responsible for overseeing both your progress on the research project and your personal welfare. You and your supervisor may meet daily on an informal basis. In addition, an independent panel member (IPM) is appointed to maintain an overview of your research work. You, your supervisor and IPM will meet formally at least twice a year to review progress and make a realistic appraisal for the timetable of work to be undertaken.

Our innovative Doctoral Training in Chemistry programme supports development of essential scientific and transferable skills for your future career. Core training includes literature searching; time management and motivation; report, paper and thesis writing; networking; preparing scientific posters and presentations; employability and professionalism; and teaching assistance. You will attend and present your research at seminars, meetings and conferences.

Research-specific training supports your use of equipment, understanding the science underpinning your research, and problem-solving skills. ‘Hot topics’ discuss cutting-edge chemistry in a number of important areas and broaden knowledge of the latest scientific developments.

Many students registered on higher degrees have strong links with industry and commerce, in local, national and even international organisations. Some industrial collaborators offer financial support to PhD students. In addition, they may provide opportunities to work within the company and gain experience of an industrial setting.

The Department’s research strategy is built on strong sub-disciplines of chemistry, led by world-renowned chemists in each area. The groups meet together on a regular basis to discuss...
research developments of common interest, providing an excellent environment for the training of research students. When applying for a PhD or MPhil degree programme please indicate on the application your preferred area of research, and provide the names of at least two members of academic staff with whom you might like to work.

**Analytical Chemistry Research Group**

The group focuses on the development of analytical methods, principally centred on separations science and mass spectrometry, and their application in biomolecular and environmental research. Large, interdisciplinary collaborations are central to the research in this section.

**Biological Chemistry Research Group**

Work in the York Structural Biology Laboratories (YSBL) focuses on the fundamental bases for biological and biochemical processes, the use of small molecules to probe cellular biology, software and methods development, and the exploitation of enzymes in biocatalysis.

**Green Chemistry Research Group**

This group aims to promote the development and implementation of green and sustainable chemistry into new products and processes. It develops strategic research partnerships with global corporations and world-leading universities.

**Inorganic Chemistry Research Group**

The inorganic group has strengths in organometallic, coordination and bioinorganic chemistry as well as catalysis, inorganic photochemistry, inorganic materials and solar energy conversion.

**Materials Chemistry Research Group**

The Materials Chemistry group is primarily interested in molecular material based upon liquid crystals. There are active industrial research contacts with more than ten companies.

**Organic Chemistry Research Group**

The group reflects the main strengths of York of contemporary synthetic and physical organic chemistry.

**Physical Chemistry Research Group**

The main research themes of the Physical Chemistry group are atmospheric chemistry, theory and computation, spectroscopy and photochemistry, and physical chemistry of materials.

**Your background**

You should normally have (or expect to receive) at least a 2:1 degree in Chemistry (or a Chemistry-related subject) or its overseas equivalent. Progression on the PhD is confirmed during the second year, after a formal assessment meeting with your supervisor and another member of staff. This meeting reviews progress and makes a realistic appraisal of your likely progress during the project over the remaining period of the degree.

**Available funding**

Many PhD degrees receive funding from an external funding body such as a Research Council, charity, the EU, an industrial company, or a combination of these. The Department also offers Chemistry Teaching Studentships. Funding is offered in one of two ways. The first is where the academic member of staff leading the research will have already received funding prior to the research project being advertised. The second is where a project has been approved by the Department’s Research Committee and funding is subject to competition against all other projects. Funding normally covers student tuition fees as well as a maintenance grant for living expenses. Your eligibility for funding depends on your fee status; some funding bodies limit funding to UK nationals or EU residents. The University welcomes applications from international students, and a number of scholarships are available annually. These awards provide a contribution towards the cost of tuition fees.

Information about all sources of funding for research degree programmes can be found on our website at www.york.ac.uk/chemistry/postgraduate.

**Wild Fund Scholarships**

The Department is pleased to support self-funding students from outside the UK to study for research degrees in Chemistry at York by offering the opportunity to apply for a Wild Fund Scholarship. Scholarships offer up to £4,000 per year of study to students from the European Union (outside the UK) and up to £7,000 per year of study to students who will pay fees at the overseas rate. Scholarship applications are welcomed from those wishing to study for MSc by research, MPhil or PhD. Scholarships are awarded competitively, based on academic excellence and financial need. For more information please see our website or contact chemgrad@york.ac.uk.

---

**Staff list**

**Professor and Head of Department**

Duncan Bruce, DSc (Liverpool)  
Materials chemistry; liquid crystals; biaxial nematics; mesoporous oxides; multifunctional materials

**Professors**

**Alfred Antson**, PhD (Moscow)  
Protein–nucleic acid interactions

**Andrzej Marek Brozowski**, PhD (Lodz)  
Structural biology of hormone regulation: insulin/IGF–1; membrane proteins; protein crystalisation

**Lucy Carpenter**, PhD (East Anglia)  
Atmospheric chemistry; sea-air interactions; atmospheric monitoring and detection

**James Clark**, PhD (London)  
Green and sustainable chemistry; renewable resources; industrial applications

**Gideon Davies**, PhD (Bristol), FRS  
Structural enzymology; chemical biology; glyco-biology; carbohydrate chemistry; neurochemistry; drug design

**Simon Duckett**, DPhil (York)  
NMR; catalysis; parahydrogen; hyperpolarisation; MRI; photocatalysis; mechanism and organometallic chemistry

**Mathew Evans**, PhD (Cambridge)  
Atmospheric chemistry modelling

Computer Science

The Department of Computer Science at York is consistently ranked among the top Computer Science departments in the UK. Our excellence in teaching and research has helped us to gain a strong international reputation. We have a major influence in the development of the subject and on industrial practice.

In the 2014 Research Excellence Framework assessment, 90 per cent of the Department’s research activity was rated as ‘world-leading’ or ‘internationally excellent’, ranking us fifth in the UK for the impact on society of our research. The Department’s teaching is equally highly regarded.

Our research activity centres on the Department’s ten major research groups: Advanced Computer Architectures; Artificial Intelligence; Computer Vision and Pattern Recognition; Enterprise Systems; Games; High–Integrity Systems Engineering; Human–Computer Interaction; Programming Languages and Systems; Non–Standard Computation; and Real–Time Systems. All of these groups are internationally recognised, and many are world-leading.

We emphasise a multidisciplinary approach to research and there is significant collaboration with other departments at York and with researchers around the world in both universities and industry. We drive our teaching by our research and the topics we teach are both fresh and forward-looking. Our postgraduate taught courses are developed in collaboration with industry and relevant professional bodies, ensuring our courses remain dynamic and relevant.

The British Computer Society and the Institution of Engineering and Technology recognise the majority of our taught courses in meeting conditions for professional engineering status.

The Department provides a friendly environment which supports and develops teaching and research. We hold an Athena SWAN Bronze award, demonstrating our commitment to supporting women in science. We are situated in state-of-the-art, purpose-built accommodation on Heslington East and teaching and research are supported by cutting-edge equipment and facilities.

Research students choose to work with one of our research groups and enjoy all the facilities of the Department. Postgraduate teaching includes core computing issues and advanced topics, and our courses differ in emphasis to suit your interests and chosen career path. More details about the courses, including individual modules, can be found at www.cs.york.ac.uk/postgraduate.

Your future

The Department has excellent relations with industry and more than 97 per cent of our postgraduate students go on to employment or further study within six months of graduating.

ENGLISH LANGUAGE REQUIREMENT
iELTS 7.0 or equivalent (see page 33) with no less than 6.0 in Writing for MSc in Social Media and Interactive Technologies
iELTS 6.5 with no less than 6.0 in each component for other taught programmes
iELTS 6.0 with no less than 5.5 in each component, or equivalent, for research programmes

Programmes offered

MSc in Advanced Computer Science
MSc in Computing
MSc in Cyber Security
MSc in Human–Centred Interactive Technologies
MSc in Information Technology
MSc in Social Media and Interactive Technologies
MSc in Software Engineering
MSc in Computer Science (by research)
PhD
PhD in Intelligent Games and Game Intelligence
MSc/Diploma in Safety Critical Systems Engineering
Postgraduate Certificate in System Safety Engineering

Your future

The Department has excellent relations with industry and more than 97 per cent of our postgraduate students go on to employment or further study within six months of graduating.
Programmes overview

**MSc in Advanced Computer Science**
The MSc in Advanced Computer Science is a full-time, one-year taught course, intended for those who would like to develop a level of understanding and technical skill at the leading edge of Computer Science. It also provides ideal preparation for a PhD or other research work.

You study a range of advanced topics in Computer Science, taught by active researchers. You will then undertake an individual project, attached to one of our established research groups.

**Your background**
Typically you will have achieved at least a 2:1 honours degree (or international equivalent) in Computer Science, with a strong mathematical content. We are willing to consider your application if you do not fit this profile, but you must satisfy us that your knowledge in Computer Science is appropriate for advanced study.

**MSc in Cyber Security**
Certified by GCHQ, as the National Technical Authority for Information Assurance
The MSc in Cyber Security is targeted at those who need to make technically informed cyber security decisions, or who wish to follow a research career in this area. Taken full-time over one year or part-time over three years, on graduation, your skills and knowledge will find application in software and systems engineering, government agencies and related organisations with security responsibilities.

The course educates in crucially important technical areas:
- identity, reputation and trust
- cryptography theory and applications
- computer forensics
- network and distributed system security
- malicious behaviours, malware and intrusion detection
- security management, assurance and risk assessment
- secure system development.

**Your background**
Typically you will have achieved at least a 2:1 honours degree (or international equivalent) in Computer Science or a related discipline. We will also consider applicants with appropriate work experience.

**MSc in Human–Centred Interactive Technologies**
This full-time, one-year course gives you a thorough grounding in the design and evaluation of interactive technologies of all kinds, from the perspective of people who use the systems. Its unique emphasis is on understanding users’ capabilities and requirements, including those of older or disabled users.

Graduates go on to commercial work in areas such as usability, user–centred design, web design, accessibility, user experience design, or academic research.

**Your background**
Typically, you will have achieved at least a 2:1 honours degree (or international equivalent) in a computing discipline. We will also consider applicants with appropriate work experience.

**MSc in Information Technology**
The MSc in Information Technology is a full–time, one–year course intended for students seeking a professional career in the IT industry but who do not have a background in computing. Graduates enter employment as computer programmers, technical consultants and media specialists as well as pursuing doctoral programmes.

The course aims to:
- provide a broad education in applicable areas of information technology
- provide a specialised knowledge in programming, networks, operating systems and web design.

**Your background**
Typically, you will have achieved at least a 2:1 honours degree (or international equivalent) in any discipline, as well as having some basic knowledge of programming. We will also consider applicants with appropriate work experience.

**MSc in Social Media and Interactive Technologies**
This course is organised and taught jointly with the Department of Sociology, and is fully described on page 154.

**MSc in Software Engineering**
Software engineering is a crucial discipline in the modern world. Information systems, communications, transport, manufacturing and services all require well-engineered,
dependable software. The Software Engineering course focuses on the challenges of developing software for large-scale, complex systems. It aims to provide you with:

- a thorough grounding and practical experience in the use of state-of-the-art techniques for software systems development
- an understanding of the principles behind these techniques, to enable you to make sound judgements during the design and deployment of systems.

Your background
Typically, you will have achieved at least a 2:1 honours degree (or international equivalent) in Software Engineering or Computer Science, and some experience of software engineering. We will also consider applicants with appropriate work experience.

Funding for taught Masters courses
We offer a number of taught Masters scholarships, each worth £5,000. Visit www.cs.york.ac.uk/postgraduate/taught-courses/scholarship for more details.

MSc/PhD research degrees
You will undertake a research project working closely with your selected supervisor. You will also be attached to one of our established research groups.

You may attend relevant advanced taught modules. Training in research skills is also available. Full-time MSc candidates are registered for one year, and PhD candidates for three years. These periods are doubled if you attend part-time.

Your background
Typically you will have achieved at least a 2:1 honours degree, or equivalent. You are not required to have a Masters-level degree for direct entry to the PhD programme.

Available funding
Each year we have a number of studentships available to award competitively. These help to fund tuition fees and some may cover living expenses. Visit www.cs.york.ac.uk/postgraduate/research-degrees/research-studentships for more details.

EPSRC Centre for Doctoral Training in Intelligent Games and Game Intelligence (IGGI)
IGGI is a collaboration between the University of York, the University of Essex and Goldsmiths College, University of London. It will train the next generation of researchers, designers, developers and entrepreneurs in digital games.

IGGI is a unique opportunity for you to undertake PhD research in collaboration with our 60 industrial games partners and world-leading academics. The programme combines practical skills training with advanced teaching in cutting-edge research topics, industrial placements and the chance to contribute original research to a growing academic area.

Your background
Typically, you will have achieved at least a 2.1 honours degree (or international equivalent) in a discipline related to game design, development or analysis. We will consider applicants with significant work experience, for example, working on game design.

Available funding
Funded by the EPSRC, we have a number of studentships available for each year of entry to cover tuition fees and include an annual stipend. Visit www.iggi.org.uk for more information.

MSc/Diploma in Safety Critical Systems Engineering
Postgraduate Certificate in System Safety Engineering
These full- or part-time courses are built on industrial and academic collaboration in the railway, nuclear, defence, civil aerospace, maritime and automotive domains. Participants have attended from Qinetiq, Thales, BAE Systems, TRW, Sellafield, Jaguar Landrover, EDF Energy, Lloyds Registry, Knorr-Bremse Rail, Eurocontrol, ERA and AWE, among others.

These courses enable you to take a leading role in the design, assessment and support in operation of systems with high safety impact. They do so by providing knowledge of appropriate techniques and methods, placed within an organisational and process context. They also provide skills in applying these techniques and ways of thinking about system safety that allow good safety decisions to be made.

They are designed for part-time students to take over two or three years; the MSc may also be taken full-time over one year.

The Department also has a number of collaborations in place to provide tailored versions of the course. If you are working in the railway industry but have relatively little knowledge in this domain we offer an MSc in Railway Risk and Safety Management, in collaboration with the Railway Centre at the University of Birmingham. If you work for Jaguar Land Rover, we can offer you the MSc in System Safety with Automotive Applications, in collaboration with the Technical Accreditation Scheme.

Your background
These courses are specifically directed at those with several years of industrial experience. An appropriate degree is desirable, but many applicants will have reached degree-level knowledge through their work experience.

--

Staff list
Professor and Head of Department
Jim Woodcock, FEng, PhD (Liverpool), FBCS, CITP, CEng

Formal methods and tools; semantics; concurrency; software engineering

Professors
Neil Audsley, DPhil (York) Embedded real-time systems: architectures, memory; analysis programming; high performance
James Austin, PhD (Brunel) Neural networks; e-science and grids; parallel computation; neuro-inspired computation
Samuel Braunstein, PhD (Caltech), CPhys, FinstP Quantum information and computation; black holes
Alan Burns, DPhil (York), FIEEE, FBCS, FIET Real-time systems; resources scheduling; real-time programming languages; mixed criticality; cyber physical systems
Ana Cavalcanti, DPhil (Oxford) Software verification; formal methods; real-time; concurrency; object–orientation

Computer Science
John Clark, DPhil (York) Security; cryptography; non-standard computation; software engineering
Peter Cowling, DPhil (Oxford) Artificial intelligence; operational research; graph search; heuristics; games
Edwin Hancock, PhD, DSc (Durham), FinstP, FIET, FBCS Computer vision; pattern recognition; machine learning; complex networks
Tim Kelly, DPhil (York) Development, modelling, analysis and certification of high-integrity systems
John Mcdermid OBE, FREng, PhD (Birmingham) Safety engineering; security; safety-critical software; large-scale software engineering
Richard Paige, PhD (Toronto) Model-driven engineering; software engineering; enterprise systems; optimisation; security
Helen Petrie, PhD (London) Human–computer interaction; disabled and older users; psychological aspects of technology use
Colin Runciman, DPhil (York) Programming languages and systems; functional programming
Susan Stepney, PhD (Cambridge), CEng, FBCS Bio-inspired algorithms; unconventional computation; emergent properties; artificial life
Andy Wellington, DPhil (York) Real-time programming languages and operating systems
Richard Wilson, DPhil (York) Inexact graph matching; structural pattern recognition; stereo and shape-from-shading

Readers
Paul Cairns, DPhil (Oxford) Digital gaming experience; modelling user interactions; human–computer interaction
Dan Franks, PhD (Leeds) Complex networks; agent-based modelling; bio-inspired computing; swarm robotics
Alan Frisch, PhD (Rochester) Artificial intelligence; constraint programming; automated generation of constraint programs
Suresh Manandhar, PhD (Edinburgh) Natural language processing; minimally supervised learning of syntax and semantics
Stefano Pirodella, PhD (Cambridge, Italy) Information theory; quantum computation; quantum cryptography

Senior Lecturers
Iain Bate, DPhil (York) Real-time and critical systems design and analysis; wireless sensor networks
Radu Calinescu, DPhil (Oxford) Self-adaptive software systems; formal modelling and verification at run time
Howard Chivers, PhD (York) Security; risk management; computer forensics; malware; intrusion detection
James Cussens, PhD (London) Machine learning; probabilistic graphical models; discrete optimisation
Alistair Edwards, PhD (Open) Novel forms of multi-modal human–computer interaction
Jeremy Jacob, PhD (Oxford) Mathematical modelling and design of systems and languages with a focus on security
Dimitar Kazakov, PhD (Prague) Artificial intelligence; machine learning; computational linguistics; language origins
Steve King, DPhil (Oxford) Formal software development; provably-correct software; safety-critical software
Nick Pears, PhD (Durham) Computer vision and pattern recognition; machine learning; 3D shape analysis/modelling
Detlef Plump, Dr–Ing, Habilitation (Bremen) Graph-based programming models; theoretical computer science
Fiona Polack, PhD (Cambridge) Software engineering; complex simulation; model-driven engineering
William Smith, PhD (York) Face recognition; shape-from-shading; reflectance/appearance modelling
Leandro Soares Indrusiak, Dr–Ing (TU Darmstadt) Real-time and low-power multiprocessor systems
Alan Wood, PhD (London) Distributed computing; co-ordination systems and languages

Lecturers
Rob Alexander, PhD (York) Safety of autonomous robots; search-based testing; empirical safety engineering
Chris Bailey, PhD (Teesside) Novel processors and arrays; code optimisation and translation; VLSI design
Adrian Bors, PhD (Thessaloniki) Image processing; computational intelligence; motion estimation; digital watermarking
Mike Dodds, PhD (York) Concurrency; verification; relaxed memory; automated reasoning
Dimitrios Kolovos, PhD (York) Model-driven engineering; object-oriented design; software architecture; programming languages
Daniel Kudenko, PhD (Rutgers) Artificial intelligence for games; machine learning; user modelling
Simon O’Keefe, DPhil (York) Neural networks; binary correlation matrix memory; non-standard computation
Christopher Power, PhD (Western Ontario) Human–computer interaction; accessibility; user requirements; evaluation methodologies
Louis Rose, PhD (York) Software maintenance and evolution; model-driven engineering; software testing

Senior Research and Teaching Fellows
Rob Davis, DPhil (York) Real-time systems; scheduling analysis; industrial applications
Mark Nicholson, DPhil (York) System safety engineering; data safety; systems engineering; statistical analysis

Research and Teaching Fellows
Lilian Blot, PhD (UEA) Volumetric data; medical and biological image analysis and 3D representation
Anna Bramwell–Dicks, MSc (York) Human–computer interaction; auditory interaction; evaluation methodologies
Mike Freeman, PhD (York) Hardware architecture for high speed text and vector processing
Ibrahim Habi, PhD (York) Software architectures; product-line development; software safety; safety cases
Oleg Lisagor, PhD (York) Safety engineering; analysis of software-intensive systems; model-based safety assessment
David Pumfrey, DPhil (York) Hazard identification; risk assessment; system and software safety analysis
Tommy Yuan, PhD (Leeds Met) Argumentation; dialogue systems; dependability arguments; autism software

ENGLISH LANGUAGE REQUIREMENT
IELTS 6.5 with no less than 6.0 in each component, or equivalent (see page 33)

Programmes offered

- Postgraduate Certificate and Diploma in Health Economics for Health Care Professionals (by distance learning)
- MSc in Economic Evaluation for Health Technology Assessment (HTA) (by distance learning)
- MSc in Development Economics and Emerging Markets
- MSc in Econometrics and Economics
- MSc in Economics
- MSc in Economics and Finance
- MSc in Economics and Public Policy
- MSc in Finance
- MSc in Finance and Econometrics
- MSc in Financial Engineering
- MSc in Health Economics
- MSc in Project Analysis, Finance and Investment
- MSc in Economic and Social History (by research)
- MPhil/PhD

See also Politics, Economics and Philosophy on page 134.

The Department has one of the largest concentrations of expertise in economics and related areas in UK universities. We offer one-year MSc courses as well as research degrees. York has been awarded ESRC DTC status, which provides scholarships for PhD studies.

Pioneering work in new fields like health and experimental economics established York as a world leader in these areas while, at the same time, it has developed an international reputation in core areas of economics and econometrics.

We are a large, vibrant department with a wide range of MSc programmes and a large community of research students. Our high quality research directly informs our teaching, and we are proud of the impact and influence of our research in society, and of our contribution to scholarship.

Economics at York

- In the 2014 Research Excellence Framework assessment, the Department was ranked in the top ten in the UK for ‘research power’ and in the top ten for the impact of its research on society.
- One of only three UK institutions to receive five ‘stars’ from the Centre of Higher Education Development for postgraduate economics.
- A QS World Top 100 department for economics and econometrics
- The institution which pioneered ‘health economics’
- The University was awarded the Queen’s Anniversary Prize in recognition of outstanding work at world-class level in health economics.

Particular features

- Research students are actively encouraged to participate in national and international conferences (financial assistance is available to students who are invited to present papers).
- Each research student is a member of one of the seven research clusters in the Department.
- Postgraduate students have their own society which runs academic and social events.
- About 25 teaching fellowships are available each year to help with undergraduate teaching.
- Both MSc and PhD students have access to fully equipped study areas within the Department. Typically each research student has their own desk with PC.

Your future

Graduates from our postgraduate programmes are employed in a wide range of institutions around the world. Working as economists or finance experts in financial institutions, world public bodies such as the IMF or country governments, our graduates find that they can use their leading-edge skills with success in the world job market.
Programmes overview

Our graduate programme provides flexible entry to postgraduate study depending on student background. We offer a main one-year MSc pathway and research degrees at the MPhil level (two years full-time) and PhD level (three years full-time). We also offer a background refresher Summer Session in economics and quantitative methods, and a free two-week pre-sessional programme in mathematics and statistics. The Department, in collaboration with the University’s Centre for English Language Teaching, provides English language support for overseas students. We admit upwards of 150 new students each year for the taught MSc programmes and there are approximately 50 students registered for MPhil or PhD degrees of whom about 75 per cent are in full-time residence.

Your background

Applicants will normally expect to have the equivalent of a 2:1 degree in a relevant subject.

Health Economics by distance learning:

**Postgraduate Certificate and Diploma in Health Economics for Health Care Professionals**

These programmes are designed for those in the healthcare sector wishing to gain an accredited qualification in health economics, but who are unable to study full-time. All students apply for the Postgraduate Certificate in the first instance and progression to the Postgraduate Diploma and MSc is dependent upon satisfactory performance at earlier levels.

The Postgraduate Certificate programme covers the basic principles and tools of health economics.

The Postgraduate Diploma programme covers these same basic tools and deepens knowledge in specific areas.

The MSc aims to further students’ knowledge and understanding of basic and advanced issues in the economic evaluation of health technology assessment through high quality training in relevant theoretical and practical issues.

For further information, please see page 73. Full details can be found at www.york.ac.uk/economics/postgrad/distance_learning.

**MSc in Economic Evaluation for Health Technology Assessment (HTA)**

These have a common pattern of nine months spent on 100 credits of advanced coursework and examinations, and three months spent preparing a 10,000-word dissertation. The coursework generally has core compulsory modules in key areas for the MSc in question (typically Micro- and/or Macroeconomics, Econometrics, Finance or Quantitative Methods) and a range of optional modules in either specialised theory or applied areas. Details of the structure and module syllabi can be found at www.york.ac.uk/economics/postgrad/taught-masters.

One-year taught MSc degrees

These programmes are available at the MSc level (typically two years full-time). The programmes cover core compulsory modules in key areas for the MSc in question (typically Micro- and/or Macroeconomics, Econometrics, Finance or Quantitative Methods) and a range of optional modules in either specialised theory or applied areas. Details of the structure and module syllabi can be found at www.york.ac.uk/economics/postgrad/taught-masters.

**MSc in Development Economics and Emerging Markets**

This is a vibrant, state-of-the-art, intellectually challenging and exciting programme. Students will acquire sound theoretical and applied training and will be given the opportunity to pursue interests in areas at the frontiers of development economics with leading researchers in these fields, including specialist pathways in health and finance.

**MSc in Econometrics and Economics**

The aim of this programme is to take students with a prior knowledge of economics and econometrics and/or mathematics and offer a thorough grounding in applied and theoretical econometrics. The modules are taught by leading experts in microeconometrics, panel data analysis, time series and non-parametric modelling. The programme provides the essential skills to those wishing to follow professional careers and to pursue further research.

**MSc in Economics**

The programme is intended for students who wish to acquire graduate-level skills in economic analysis and relevant quantitative techniques. It is designed for careers in research agencies, consultancy firms and economic advisory services of governments, banks or international organisations, or as university teachers or researchers. The programme provides opportunities for studying various economic subjects in depth and for gradual transition to undertaking research.

**MSc in Economics and Finance**

The aim of this programme is to take students with a prior knowledge of economics and give them a thorough grounding in theoretical and applied finance. The programme provides the essential postgraduate skills to those wishing to follow careers in areas associated with finance and economics, as well as those wishing to pursue further research.

**MSc in Economics and Public Policy**

This programme offers a thorough training in core areas of economics used in the evaluation of public policy. It is designed for students who wish to develop their abilities in policy analysis and provides a solid foundation for careers in government, international organisations, research centres, consultancy firms and universities.

**MSc in Finance**

The aim of this programme is to take students with a prior knowledge of economics or the natural sciences and give them a thorough grounding in theoretical and applied finance. The programme provides the essential postgraduate skills to those wishing to follow careers in applied or quantitative finance, as well as those wishing to pursue further research.

**MSc in Finance and Econometrics**

The aim of this programme is to take students with a prior knowledge of economics and/or mathematics and give them a thorough grounding in theoretical and applied finance. The programme provides the essential postgraduate skills to those wishing to follow careers in applied or quantitative finance, as well as those wishing to pursue further research.

**MSc in Financial Engineering**

The programme is intended for candidates who want to combine a rigorous study of relevant topics in applied and computational mathematics with econometrics and quantitative finance. This MSc is delivered jointly by the Department of Mathematics and the Department of Economics and Related Studies. For further information, please see page 107.

**MSc in Health Economics**

The MSc in Health Economics offers high-level courses and access to a network of economists and healthcare professionals for summer research placements. The objective of the programme is to produce well-trained economists with the ability to apply their...
of research, the student is also required to attend research training by the Thesis Advisory Panel of one or two colleagues. During the first two years of research the student is required to make 20 credits of assessed courses in their first year. The programme is completed by the submission of a thesis after three years of research, which must contain an original contribution to knowledge or understanding. The recommended length is 30,000 words and it is examined by a committee of examiners during a viva voce examination.

MSc Economic and Social History (by research)
The programme is intended for students with a first degree (normally 2:1 or equivalent) with courses in economics and/or economic and social history who wish to pursue graduate work by research.

MPhil
The MPhil is a two–year programme. It is similar in structure to the PhD, except that it is one year shorter and the thesis requirement, both in length and in originality, is reduced accordingly. Students are only required to make 20 credits of assessed courses in their first year.

Available funding
The Department is part of the ESRC White Rose Doctoral Training Centre which provides funding for PhD students, covering fees and a living allowance. Typically we have two ESRC studentships available per year. The Department itself funds some PhD scholarships. For 2015/16 we are likely to have between two and four three–year scholarships available, worth up to £16,000 each (out of which fees at the appropriate rate are payable). PhD students may also apply for teaching scholarships, which offer additional money (up to about £3,500) in return for teaching undergraduate seminars. Additionally, for Masters students we have eight NIHR studentships which are open to EU students on the MSc programme in Health Economics.

For more information on funding please see our website www.york.ac.uk/economics/pg-funding.

Economics Summer Session
York offers the Economics Summer Session, both for students who have the ability to complete a one–year MSc but whose background is inappropriate but relevant, and for other graduate students who want to enhance their economic and quantitative skills. The course consists of lectures and tutorials in two modules, an Economics Module (50 per cent), and a Quantitative Module (50 per cent). This course is available by distance learning and as a residential course; further details can be found at www.york.ac.uk/economics/postgrad/msc-summers.

“I came to York because I was attracted by the stimulating research environment and the opportunity to work alongside top academics in a world-renowned institution. My experience has definitely met my expectations. My supervisors have created a friendly and supportive environment and I’m excited about the interesting research collaborations we’ve established. Opportunities to present at international conferences have built up my confidence and given me vital skills for my future career.”

</table>
The Department of Education is one of the largest recruiters of overseas graduate Education students in the UK. You will be joining a thriving academic community that places a high value on research and teaching with a strong international dimension.

The Department’s teaching and research are held in high regard nationally and internationally. In the 2016 Complete University Guide league table, Education at York was ranked in the top ten nationally. In the 2014 Research Excellence Framework assessment, the Department was ranked in the top ten for the proportion of its research designated as ‘world-leading’. We encourage and support studies involving a range of research approaches, including studies of innovation and change in educational settings in the UK and overseas in both high and low income countries.

The Department has four research centres, focusing on Education and Social Justice; Language Learning and Use; Science Education; and Psychology in Education. In addition, we have strong links with the Institute for Effective Education which develops and evaluates innovative education programmes and practices in order to identify the best available evidence for policymakers and practitioners.

The Department’s excellence in research methods training is recognised by the Economic and Social Research Council (ESRC). The Department is also a member of the White Rose Doctoral Training Centre, a major collaboration between the Universities of Leeds, Sheffield and York and one of the UK’s biggest doctoral training centres for postgraduate researchers in the social sciences.

We pride ourselves on being a warm and friendly department, where you will receive plenty of support for your study and opportunities for you to mix with fellow students and members of staff.

Our MA programmes are designed to support existing and prospective teachers in schools, colleges and universities across the world and serve as excellent introductions to PhD research. Our students secure teaching posts in state and independent schools across the UK as well as posts in many other fields.
Programmes overview

We currently offer a range of different types of postgraduate qualification: taught and research, full-time and part-time. Our MA programmes also cover a range of topic areas. Four specifically relate to aspects of language education; please check that you are applying for the programme that is appropriate to your needs, qualifications and experience.

Our taught MA programmes and PhD programme are taken by students from the UK and all over the world, who bring with them and share a range of different experiences of education. The PGCE is more UK-based.

Our programmes are designed to offer you the opportunity to thrive in your chosen field of study. Our full-time MAs last one year and part-time ones 18 months or two years. The full-time taught programmes all involve 180 credits. These are made up from compulsory (core) modules, option modules in specialist areas, and a 12,000-word dissertation reporting a piece of research you yourself have designed and carried out. This gives you considerable flexibility to select a pathway through your MA that suits your personal interests and needs. You will be formally assessed via assignments and the dissertation.

All our MA programmes also aim to provide a basis for those wishing to go on to study for a PhD, either immediately after completing the MA or at a later stage. We offer an MPhil/PhD programme for students wishing to carry out a substantial piece of research.

Your background

You should normally have (or expect to receive) at least a 2:1 honours degree or equivalent.

Postgraduate Certificate in Education (PGCE)

This is a one-year programme of study designed for students who wish to become effective teachers at secondary school level (age range 11–16) and leads to Qualified Teacher Status. We offer Core PGCE and School Direct PGCE programmes in partnership with Red Kite, Pinnacle and Pathfinder Teaching School Alliances. Our subject offer is: English, History, Maths, Biology, Chemistry, Physics, Modern Foreign Languages, Geography, Drama, Computer Science, Economics and Business Studies. Students will experience taught sessions at University and also spend substantial periods of time in different secondary schools on teaching placements. The programme also incorporates study leading to the award of 50 credits at Masters level. In 2012 the Office for Standards in Education (Ofsted) awarded the PGCE programme a Grade 2: Good.

The programme is open to graduates from York and other universities. Applications are particularly welcome from candidates with some experience of working with young people. Further details are available at www.york.ac.uk/education/pgce. Applications should be made as early as possible in the academic year.

MA in Education (by research)

This programme offers an opportunity for study full-time over one year, or part-time over two years, wholly by supervision, leading to the production of a dissertation of about 25,000 words. Students of current practice and developments in education are particularly welcome. We are also happy to receive applications from students from areas outside schools, such as nurse education, prison education and further education. You are expected to have a clear idea of the topic area you wish to explore when you apply. Students studying for the MA in Education (by research) are offered the opportunity to join a research methods module in the Autumn Term, or, if this is not possible, will undertake guided reading on research methods. The part-time programme is only available to home/EU students.

MA in Education

This is a one-year full-time taught programme which will provide you with the maximum choice of modules and areas of research for your dissertation. The main focus of this programme is on allowing you to study a wide range of educational issues and then focus on a topic of interest to you for your dissertation. Such dissertation studies can focus on current developments in education or an educational issue of personal concern. Studies have looked at such diverse topics as bullying in schools, collaborative learning, the use of language games in the classroom, the hidden curriculum and pupil motivation. You can conduct your study in the UK or overseas.

MA in Global and International Citizenship Education

This is a one-year full-time taught programme. Globalisation is a driving force of modern education systems. Schools (and other educational enterprises in universities, businesses and communities) are part of a global network. This programme explores what it means to be a citizen in a global world; what could and should be done by educators to respond to the needs of individuals and groups in nation states; and the new global society.

This programme will be attractive to all those who have an interest in social studies education. This includes political and ideological education, moral education and education for diversity. In particular, the programme explores how to help people understand society and develop the skills to take part in it. This includes investigations of European citizenship and global citizenship education and focusing on learning and teaching methods. The programme will be of interest to current or future teachers, researchers or policymakers.

MA in Applied Linguistics for Language Teaching

This is a one-year full-time taught programme that provides a broadly-based MA in second and foreign language education, including languages other than English. It is informed by theoretical and...
practical concerns. The programme offers advanced enquiry into the processes of second language learning and teaching, and runs alongside the MA in Applied Linguistics for English Language Teaching. Applicants must have the equivalent of at least one year’s full-time teaching experience, and an undergraduate degree in a language-related subject, linguistics, or education. Students on the course have a wide range of teaching experience, including the teaching of languages other than English, to different age groups and proficiencies, and come from a variety of contexts. One aim of the programme is to enable students to make more informed decisions in their own educational contexts. We also welcome students who hope to continue to PhD-level study. Students can select assignments and design small-scale studies to match their own concerns and interests.

MA in Applied Linguistics for English Language Teaching

This one-year full-time taught programme will appeal to all those with interests in TESOL. It provides a broad–based MA in teaching English as a second or foreign language, and runs alongside the MA in Applied Linguistics for Language Teaching. Applicants must have the equivalent of at least one year’s full-time teaching experience, and an undergraduate degree in a language-related subject, linguistics or education. Students on the course have a wide range of English teaching experience, with different age groups and proficiencies, and come from a variety of countries and contexts.

MA in Teaching English to Speakers of Other Languages (TESOL)

This is a one-year full–time taught programme for students who plan to teach English as a second or foreign language with or without teaching experience, or who plan to do research on the teaching, learning or assessment of English as a second or foreign language. The programme aims to (i) provide an introduction to current issues and key trends in English language learning/teaching in a global context; (ii) develop students’ knowledge of TESOL and Applied Linguistics that will facilitate better language teaching and assessment; (iii) provide research skills that students will need in order to engage critically with the literature, to carry out their own research project and to move on to doctoral research in TESOL, Applied Linguistics or related areas. Applicants must have an undergraduate degree in a language-related subject, Linguistics or Education.

MPhil/PhD in Education

Applications are especially welcome from students who want to conduct research in one of the following areas: Second Language Learning and Teaching; Psychology in Education; Science Education; and Education and Social Justice. Some supervisors are based in the Institute for Effective Education (IEE) and the Centre for English Language Teaching (CELT). These programmes can be taken full–time (two years MPhil; three years PhD), part–time (four and six years respectively) or by mixed mode of registration. The part–time programme is only available to home/EU students. These degrees are based on submission of a research thesis of about 55,000 words for the MPhil and about 85,000 words for a PhD. Our philosophy is to support you to research a topic you are interested in. As such, you need to submit a short outline (1,500 words) of your proposed research topic and method of study with your application. You might find it helpful to contact the MPhil/PhD programme leader before applying to check that your area of interest is one we can supervise.

During your period of registration you will meet regularly with your supervisor who will offer you advice and guidance on your study, and provide you with feedback on how your work is progressing. Another member of staff together with your supervisor will form your Thesis Advisory Panel. They will meet with you more formally from time to time to review your progress and to ‘confirm’ your PhD status, usually midway through the programme.

In addition to supervisory support, the Department organises a variety of research training workshops. Meetings of the Educational Research Group provide an informal setting at which staff and research students can make presentations. The University also runs an extensive programme of research training and personal development workshops for research students.

Finally, our postgraduate students can work across disciplines and institutions within the White Rose Doctoral Training Centre, receiving first-class training, collaborating with other postgraduate researchers across Yorkshire and enjoying opportunities to develop interdisciplinary networks and expertise.

MPhil/PhD in Teaching English for Speakers of Other Languages

This is a new programme specially designed for English as second or foreign language teachers, teacher educators, professional development administrators, materials writers, researchers and academics interested in enhancing their specialised knowledge through academic study and research. The course aims to help students to achieve a critical understanding of teaching and learning theories and to obtain solid grounding in research methodology appropriate for conducting research projects in their professional contexts.

For more information, see MPhil/PhD in Education.

Available funding

For up-to-date information about scholarships available, please see the Department’s Scholarships web page: www.york.ac.uk/education/postgraduate/scholarships.

MPhil/PhD in Language and Communication

The Department also participates in an interdisciplinary MPhil/doctoral programme in Language and Communication. For more information see page 90.

Programmes offered

MA in Eighteenth Century Studies
MA in Literature of the Romantic Period, 1775–1832
MA (by research)
MPhil/PhD

International conferences, symposia, research seminars, meetings of the Postgraduate Forum, visits by distinguished scholars from all over the globe – there is always something happening at the Centre for Eighteenth Century Studies (CECS), and you feel part of the research community as soon as you arrive here.

CECS provides a rich and stimulating environment for all forms of interdisciplinary and cross-disciplinary study. Our staff provide specialist supervision in Archaeology, English Literature, History and History of Art, and all have published extensively within the period. Together with our doctoral and Masters students they have created a lively research community where you will be able, individually and collaboratively, to pursue your interests in the politics, culture, literature, art and society of the period.

Our fortnightly research seminars welcome visiting speakers from Europe and North America as well as from across Britain; they are sociable occasions where you will meet and talk informally with staff and other students. Our regular conferences and one-day symposia are particularly geared to the interests of our graduate community while also attracting delegates from this country and beyond. We encourage our students to organise their own activities for the CECS community. CECS students have recently run highly successful conferences, and have established a very popular Postgraduate Forum which provides MA and PhD students with valuable peer support for their research. CECS is regularly home to major funded research projects, with both doctoral and postdoctoral researchers, and welcomes visiting postdoctoral fellows from other countries.

CECS is housed in the historic King’s Manor in central York, one of England’s most beautiful cities and an exceptionally good place to study the 18th century. York has a wealth of Georgian architecture, notably the Assembly Rooms and the Georgian museum at Fairfax House, and offers easy access to the 18th-century houses and landscape gardens of Yorkshire, including Castle Howard, Harewood House and Burton Constable.

Your future

CECS is widely recognised as the leading centre in the English-speaking world for interdisciplinary research in the ‘long’ 18th century, and staff have published extensively in the period. Our frequent conferences and symposia provide opportunities to network with internationally renowned scholars. Alumni have gone on to have successful careers in higher education, publishing, law, the media, arts administration, teaching and the film industry.
Programmes overview
CECS offers two taught MA programmes, the interdisciplinary MA in Eighteenth Century Studies and the MA in Literature of the Romantic Period 1775–1832. These programmes are taught by members of the University’s academic staff, and you can take them either full-time over one academic year or on a part-time basis over two years, each year running from October to the following September. For more details, see our website.

On each MA, you take the programme core module and three optional modules. You can choose your optional modules from a wide range of options shared by the different CECS programmes. These are fully described on our website. The programmes are designed to be as flexible as possible to enable you to pursue your individual interests. You take the core module and one option module in the Autumn Term, and two option modules in the Spring Term. Each module is taught by weekly seminars, and assessed by a term paper of 4,500 words. You also produce a dissertation of 15,000 to 20,000 words, researched and written over the Summer Term and vacation. A two-term research training course is included for all programmes.

Eighteenth-century resources
Almost all the major online databases for research into the 18th and early 19th centuries – including ECCO (Eighteenth Century Collections Online), EEBO (Early English Books Online), the British Periodicals Collection, the 19th-century British Library Newspaper Collection and the 17th- and 18th-century Burney Newspaper Collection – are available at all workstations in the University. All students have access to the extensive resources of libraries on the Harlington Campus, including special collections of rare books, the comprehensive collection of more than 12,000 reels of microfilmed 18th-century books and ephemera, and the unique and extensive archival resources of the Borthwick Institute of Historical Research. The King’s Manor Library has a large collection of 18th-century resources, including microfilm collections of prints, images, periodicals and newspapers. The King’s Manor is next door to the York City Art Gallery and York City Archives, and a few minutes from the major 18th-century collections at York Minster Library. York’s excellent resources are backed up by the presence, only a dozen miles away, of the British Library at Boston Spa, easily accessible using the University’s free minibus service.

MA in Eighteenth Century Studies
This is a fully interdisciplinary programme, involving the Departments of Archaeology, English, History and History of Art. It offers you the opportunity to study the culture and cultural history of the period 1750–1850 from new perspectives, or to lay foundations for higher degrees within the various disciplines involved in the programme. We do not, however, expect you to have previous experience in more than one discipline.

The principal focus of the programme is set by the core module in the first term, Changes of Meaning, Narratives of Change, which will introduce you to some of the most important issues and debates in the period. How did writers attempt to explain changes in the structure and values of their societies, as these impinged on such issues as the revolution in France, the status and function of the arts, the relationship between the sexes, the authority of the aristocracy, and the advantages, responsibilities and effects of Empire? In what discourses and through which narratives was cultural change theorised and described? You will study these questions mainly in relation to Britain, but with attention also to how they were being addressed elsewhere. Additionally, you will consider how the European encounter with peoples and societies in different regions of the world – notably the Americas, Africa, the Levant, India, China and the South Pacific – itself fed into the metropolitan debate. The primary texts studied on the core module are concerned with politics, history, literary history, the history of art, the law, political economy, etc, and the core module examines how far these now separate disciplines were involved in a common debate about the processes and effects of cultural change, and how far they were beginning to develop divergent and specialised accounts of those processes and effects.

MA in Literature of the Romantic Period, 1775–1832
The Romantic movement has traditionally been seen to dominate the aesthetic and literary output of the late 18th and early 19th centuries, but recent critical and historical scholarship has emphasised the range and diversity of contemporary literary styles of writing within the period. This MA programme offers you an opportunity to explore the thrilling diversity of writing between the outbreak of the American War of Independence and the Reform Act of 1832. You will have the chance to read the Romantic canon and think about the very different poetics of, for example, Wordsworth and Byron, and enjoy some of the innovative and experimental prose of the time by writers such as A L Barbauld, Mary Hays and James Hogg. You will also encounter a range of works which complicate traditional notions of Romantic writing. The core module surveys the major literary and cultural developments of the period, as formulated by contemporaries and by recent critics and theorists. This programme leads to the MA in English.

Optional modules
The wide range of optional modules on offer each year, taught by staff from all contributing departments, will allow you to tailor your MA according to your own interests. Modules include British Orientalisms, Politics of the Body, Exotic Animals in Europe, Jane Austen to Wollstonecraft, Representing the City, and Print Culture in the 1790s.

“I was drawn to postgraduate study with CECS by the calibre and expertise of the staff. Not only am I challenged to be a better academic and scholar by my fellow peers and faculty, but my ideas are taken seriously and my supervisors are incredibly supportive. No other graduate centre that I’ve come across can boast the rigour of scholarship found at CECS, matched with a convivial and encouraging atmosphere in which to conduct doctoral study.”

JESSICA, PhD IN ENGLISH
Your background

We normally welcome applications for CECS MA programmes from holders of 2:1 honours degrees in appropriate subjects. We will also consider your application sympathetically if you are a mature candidate seeking specialist qualifications after professional experience (such as an in-service teacher) or if you wish to return after an interval to continue your education, whether or not you have recent and conventional qualifications.

Many of our graduate students have gone on to study for higher degrees in Britain and the USA. Others have successful careers in publishing, the law, the media, arts administration, teaching and the film industry.

MA/MPhil/PhD research degrees

We invite applications from graduates from the UK and overseas who wish to read for research degrees in Archaeology, English, History or History of Art. Both interdisciplinary and single disciplinary topics within the relevant chronological period (1650–1850) are welcomed. The interests of members of CECS are very extensive and supervision can be offered on an extremely wide range of research topics. See the Academic Staff pages of our website for full descriptions of our staff research interests.

Research degrees are awarded on the basis of a thesis submitted within one year (MA by research), two years (MPhil) or three years (PhD); part-time students normally take twice as long in each case.

You are welcome to contact potential supervisors informally to discuss your research proposal. CECS encourages joint and interdisciplinary supervision. CECS runs a two-term research training programme for all research students, and the University Graduate Training Unit offers a full programme of skills development for postgraduates.

Available funding

For information on funding, please see our website www.york.ac.uk/cecs/pg-funding.

Staff list

Professor and Centre Director

Jon Mee, PhD (Cambridge)  English: Long 18th-century print culture; sociability; 1790s; popular radicalism; Blake

Professor

Ziad Elmarsafy, PhD (Emory)  English: Middle Eastern/North African literature (Arabic, French, English); the Enlightenment

Professors Emeritus

John Barrell, PhD (Essex)  English: English literature, art and history of the 18th and early 19th centuries

Harriet Guest, PhD (Cambridge)  English: 18th-century and Romantic literature; women’s writing; exploration voyages, especially Cook

Readers

Geoffrey Cubitt, PhD (Cambridge)  History: Political and cultural history of modern France; social memory and commemoration

Mark Jenner, DPhil (Oxford)  History: Early modern English history; medicine (social); the body

Senior Lecturers

Jonathan Finch, PhD (UEA)  Archaeology: Estate and designed landscapes; hunting and field sports

Natasha Glaisyer, PhD (Cambridge)  History: Cultural history of commerce in the 17th and 18th centuries

Joanna de Groot, DPhil (Oxford)  History: Histories of race, empire and ethnicity; women’s and gender histories

Catriona Kennedy, PhD (York)  History: 18th- and 19th-century British and Irish history; gender, war and revolution

Emma Major, PhD (York)  English: Religion, gender and national identity, c1700–1900

James Watt, PhD (Cambridge)  English: Britain and empire 1750–1840; British Orientalisms; Gothic; travel and tourism

Lecturers

Helen Cowie, PhD (Warwick)  History: History of animals, history of natural history, history of collecting

Mary Fairclough, PhD (York)  English: 18th-century and Romantic literature and science, politics, print culture

Hannah Greig, PhD (Hall)  History: Social, political and material history of Britain, c1688–1830

Jasper Heinzen, PhD (Cambridge)  History: History of modern European nationalism; the Napoleonic Wars; prisoners of war

Richard Johns, PhD (York)  History of Art: British art 1650–1850; painted interiors; landscape and marine painting

Alison O’Byrne, PhD (York)  English: Representations of the city in the “long” 18th century

IELTS 6.0 with no less than 5.5 in each component, or equivalent (see page 33)

Programmes offered

- MSc in Audio and Music Technology
- MSc in Communications Engineering
- MSc in Digital Signal Processing
- MSc in Digital Systems Engineering
- MSc in Embedded Wireless Systems
- MSc in Engineering Management
- MSc in Intelligent Robotics
- MSc in Nanoscale VLSI Design
- MSc in Electronic Engineering (by research)
- MSc in Music Technology (by research)
- MPhil/PhD in Electronic Engineering
- MPhil/PhD in Music Technology

Electronics at York is founded on internationally acclaimed research, excellent facilities and outstanding students and staff. Our research and taught course postgraduate programmes link theory, practice and creativity, equipping students to design the devices, applications, systems and networks of the future.

Research in the Department is based within four research groups: Physical Layer, Communications and Signal Processing, Intelligent Systems, and Engineering Management and Education.

The Physical Layer Research Group undertakes innovative research into the hardware associated with electronic systems, including modelling and measurement of electromagnetic interference between electronic systems and its interaction with biological systems, the design of new microwave and optical communications devices, electron microscopy, nanotechnology and spin-based electron devices. We have excellent laboratory facilities and a wide range of industrial support and funding.

The Communications and Signal Processing Research Group applies its substantial, internationally recognised expertise in MIMO, signal processing and coding, resource assignment and access control to wireless systems. Particular areas of interest include co-operative communications, cognitive and green communications, and wireless sensor networks. These are often applied to unconventional or difficult scenarios involving heterogeneous networks, aerial platforms and underwater situations.

The Group also contains a specialist Audio Lab which carries out research into virtual acoustics modelling and auralisation, the human perception of sound, human voice production and interactive sonification. We have an anechoic chamber, an interactive multi-channel loudspeaker listening room, standards-compliant listening space and three professional recording studios.

The Intelligent Systems Research Group is one of the leading groups in the world that focus on the interaction between biological and electronic systems. We have well-equipped laboratories for research in bio-inspired architectures and biological systems. Our research is used in applications such as autonomous intelligent vehicles, artificial immune systems, evolvable hardware for adaptive engineering, and neural system modelling.

In Engineering Management and Education, research is undertaken in e-learning, personalised to individual needs.

In the 2014 Research Excellence Framework assessment, 87 per cent of the Department’s research activity was rated as ‘world-leading’ or ‘internationally excellent’.

Your future

We have strong links with industry, large-scale projects for Masters degrees reflect industry practices, and many PhDs are run in collaboration with industrial partners. The Department holds an Athena SWAN Bronze award for its commitment to supporting women in science.
Programmes overview

The Department offers both taught and research-based postgraduate degrees. The taught MSc is a one-year full-time degree. Each programme combines advanced taught modules with a substantial project, mostly undertaken by students in groups, employing design, test and integration procedures that adhere to industrial quality standards.

Research degrees are offered at MSc, MPhil and PhD level in Electronic Engineering and Music Technology. Studying for these degrees at York will allow you to work with some of the leading researchers in these areas. Information regarding current research projects can be found on the following staff list and on the Department’s web pages: www.elec.york.ac.uk/research/research.html. You should consult these before applying for a research degree.

Your background

You will be expected to hold (or expect to gain) an honours degree at 2:1 (or equivalent) standard, in Electronic and Electrical Engineering, Physics, Computer Science, Mathematics or a related subject. Please check our web pages for individual programme entry requirements.

MSc in Audio and Music Technology

The MSc in Audio and Music Technology draws on research and teaching expertise in audio, acoustics and music technology in the Audio Lab to provide a rich programme incorporating audio signal processing, virtual acoustics, voice analysis and synthesis, psychoacoustics and musical perception. The MSc offers:

- an in-depth understanding of the theoretical bases, underlying technologies and practical skills in audio signal processing, audio programming and acoustics
- an overview of current research and application in the areas of audio, acoustics and music technology
- an interdisciplinary programme with flexibility to study one module in the Department of Music
- an opportunity to develop your research, project management and presentation skills through an extended independent project which can be tailored to your specific interests.

MSc in Communications Engineering

Accredited by the Institute of Engineering and Technology (IET)

The MSc in Communications Engineering focuses on modern digital communication systems, with an emphasis on mobile communications and the internet. It will provide you with the opportunity to develop:

- a sound theoretical and practical knowledge of radio communication techniques, signal processing and network protocols
- an overview of current and future wireless and internet standards
- practical experience in the design and optimisation of communication networks from the antennas to the application layer
- experience of the use of industry-standard design tools.

MSc in Digital Signal Processing

Accredited by the Institute of Engineering and Technology (IET)

Digital Signal Processing (DSP) is the core technology of modern electronic systems. This MSc will provide you with:

- an overview of the main practical and theoretical DSP tools
- knowledge and understanding of optimisation methods used in DSP
- hands-on experience of using industry-standard tools for design and analysis of DSP systems
- knowledge and understanding of theory for processing digital signals and applications in areas such as microelectronics, biomedicine, communications and defence.

MSc in Embedded Wireless Systems

Accredited by the Institute of Engineering and Technology (IET)

Wireless and embedded computing systems are the rapidly advancing integration of mobile, miniature high-performance processing platforms that utilise increasingly ubiquitous wireless networks. This MSc will provide you with the knowledge and skills to exploit this technology by gaining experience in:

- the underlying embedded computing and communications technologies
- computer programming for the design and analysis of embedded wireless systems
- software engineering and project management during an extensive practical group project

“I have amazing support from my supervisor. He helped me get involved in an industrial project which is very rewarding. The Department offers lots of opportunities to demonstrate undergraduate modules, present work at conferences, and organise events. Internal and external speakers are invited to present their current research in weekly seminars, so we can broaden our research interests. The Department of Electronics really is a fantastic place for me to prepare for my career in academia.”

JIALU, PhD IN ELECTRONIC ENGINEERING
implementation of an internet–enabled mobile computing system using wireless techniques and state–of–the–art processors.

MSc in Engineering Management

Accredited by the Institute of Engineering and Technology (IET)

This MSc will enable technically qualified graduates to become more effective managers through acquisition of management theory, tools and innovation skills applied in real engineering situations. The MSc provides:

- a sound understanding of critical theory and skills relevant to the technical manager
- opportunities to apply management strategies to real technology issues
- an environment in which to develop management skills as a solid foundation for career development
- experience in exploiting technological opportunities within large firms or as an entrepreneurial activity.

MSc in Intelligent Robotics

Robotic systems are becoming a key aspect of life today, from driverless cars to domestic and industrial applications. This MSc will provide a strong grounding in techniques applied to intelligent robotic systems, equipping you with the skills required to work in robotics research and development. You will have access to a dedicated robotics laboratory providing support for the course. You will gain experience in:

- control systems engineering for autonomous and intelligent robotic systems
- embedded systems programming for the development of intelligent robotic systems
- mobile robotics and adaptive systems
- multi–robot systems
- group project working.

MSc in Nanoscale VLSI Design

The new MSc in Nanoscale VLSI Design teaches microelectronics design and semiconductor technology with a focus on nanoscale technology. These are key enabling technologies for almost any existing electronic device, including everything from mobile phones to cars and entertainment systems.

You will gain hands–on experience founded on scientific theory creating and testing your own circuits.

You will create your very own ASIC using VLSI technology.

You will work in a team of students to integrate your chips as part of a more complex electronic system.

You will learn industry–relevant tools and essential technical and managerial skills.

MSc (by research)

The Department offers the MSc by research in Electronic Engineering and in Music Technology. These are one–year programmes based on a research project supervised by a member of academic staff from one of the Department’s research groups. The award of the degree is made following submission and examination of a dissertation.

MPhil and PhD

The MPhil and PhD degree programmes enable in–depth study of a chosen specialisation with leading researchers from the Department of Electronics. These degrees are awarded in either Electronic Engineering or Music Technology following the successful submission of a thesis and subsequent oral examination. The normal period of study is two years for an MPhil degree and three years for the PhD degree. Progress of all research students is continually guided by a supervisor and Thesis Advisory Panel.

Examples of research group projects

Communications and Signal Processing, Audio Lab: Virtual Acoustic Simulation for Auralisation

Auralisation is the audio equivalent of visualisation – the accurate rendering of an acoustic environment so that the listener perceives the result as being natural or real – and is founded on the development of accurate sound propagation algorithms. Although a number of methods exist, none as yet provide a complete solution for the whole audio spectrum in real time, so this project will research new methods for simulating an acoustic field for real–time, walk–through, auralisation. Recent research has explored hybrid and perceptual modelling solutions and parallel/distributed hardware implementations. How might these algorithms be used in the prediction and design of acoustic environments, either inside (eg concert hall design) or out (eg environmental noise assessment)?

Communications and Signal Processing: Intelligent Green Communications for High Capacity Density Scenarios

The requirement to deliver high capacity density scenarios (>10 Gbps/km²) will become commonplace in large cities over the next decade. To achieve this, novel network architectures of small cells, often with wireless backhaul to the core network, are being studied; they need to be both cost–effective and energy efficient. Researchers in this project are investigating a number of areas, including advanced MIMO physical layers, both co–operative techniques and network coding, along with cognitive resource assignment using reinforcement learning techniques, and intelligent topology management to turn base stations on and off depending on spatial and temporal traffic fluctuations, in order to significantly reduce energy consumption.

Engineering Management: Skills for Projects and Internships

Our research focuses on the skills needed to be effective in project work, internships and employability, and on ways to improve student preparation and support and maximise the benefits gained from these experiences. Based on quantitative research methods, the research aims to build a better understanding of the hierarchical nature of generic skills, inform the optimisation of the education process, and develop the notion of ‘graduateness’ of engineering students.

Intelligent Systems: Microelectronics Design

Our research in microelectronics aims to develop understanding of how stochastic variability will affect circuit design in deep sub–micron processes and to propose novel design methodologies to overcome these intrinsic variations. Our research involves the design and fabrication of a novel reconfigurable variability tolerant architecture, which allows variability aware design and rapid prototyping by exploiting the configuration options of the architecture. These are vital steps towards the next generation of FPGA architectures.

Physical Layer: Electromagnetic Dosimetry in a Reverberant Environment

The aim is to assess how much power is absorbed in the human body from exposure to radiation from mobile phones, hand–held radios and other microwave sources. At York we have recently developed a new approach to measuring the relevant parameter, the specific absorption rate (SAR). Our
A novel method is applicable to reverberant environments, such as aircraft, trains and lifts (elevators), where owing to highly reflective surfaces the waves can reach the body from all directions. Using state-of-the-art microwave test equipment, together with computational electromagnetic codes, we aim to develop this into a technique that has medical, biological and safety applications and leads to a better understanding of the interactions between electromagnetic waves and the body.

**Available funding**

Funding opportunities are available for both taught and research postgraduate programmes: see our website www.york.ac.uk/electronics/pg-funding for full details.

</table>
The Department is one of the most outstanding in Britain for research and teaching. We came first for world-leading (4*) research in the recent Research Excellence Framework (REF 2014), and second overall in the UK. These results confirm York’s position at the forefront of UK literary research, which is central to our teaching.

Our staff find it an enormous privilege to share their thoughts and findings with our students, and especially to see students’ research flourish in tandem with their own. As a postgraduate student in the Department, you will have access to outstanding research resources, including the Humanities Research Centre and several interdisciplinary research centres. Our wide-ranging interests cover the literature and culture of all periods, both in English and in a number of other languages (including Anglo-Saxon, Arabic, Classical and Modern Greek, French, German, Italian, Latin, Old Norse and Spanish).

We offer taught Masters programmes within and across all periods, from medieval to contemporary literature, and we specialise in small group teaching and individually supervised dissertations. Masters students have their own personal supervisor in addition to specialised tutors, while research students’ progress is assisted by a Thesis Advisory Panel.

Our postgraduate community is one of the largest engaged in literary research in the country; intellectual exchange is at its heart. Postgraduate research is organised into four major areas, each represented by a research school – the Medieval, the Renaissance, the Eighteenth Century and Romantic, and the Modern.

A number of prominent journals and book series are also edited from the Department, including Studies in the Early Middle Ages, Shakespeare Quarterly and the leading journal of modernist studies, Modernism/Modernity.

Your future

Studying English Literature at postgraduate level at York will enable you to enhance your creativity, intellectual independence, and ability to filter complex information and present it succinctly and persuasively in person and in writing. These skills are highly prized by top-level employers in the UK and on the international stage. Our graduates go on to become lecturers, theatre and film directors, stage managers, photographers, poets, fiction and non-fiction authors, journalists, editors, teachers, and exciting, confident professionals in many other fields.
Programmes overview
Each of our taught Masters programmes can be taken either full-time (over one year) or part-time (over two years). All students write four assessed essays, each of up to 4,500 words, during the period of their programme, followed by a dissertation of 15,000–20,000 words. The dissertation, which is supervised by regular consultations with a member of staff, is submitted in September. Students are also expected to give regular seminar presentations and attend Department day conferences. Training seminars, designed to provide an introduction to research methods and resources, are offered by the Department.

Your background
You would normally be expected to have a 2:1 honours degree or its equivalent in an appropriate subject.

MA in Poetry and Poetics
On our new MA in Poetry and Poetics, you will have the opportunity to read widely and deeply in poetry and ideas about poetry from the classical period to the present day. The language of the programme, and many of the poets studied, will be English, but you will also study poetry from a variety of linguistic cultures, and in a wide range of historical contexts. Seminars on the MA will focus on the intensive – and highly pleasurable – reading of poems and poets, in dialogue with academic staff who have published on many major authors and periods: classical poetics, medieval literature, Renaissance poetry, the Romantics and Victorians, British, Irish and American contemporary writing. There will also be modules on Old English poetry, symbolism, medieval poetic inheritance, the matter of British poetry, and poetry and art. You will develop excellent skills in reading poetry and enhance your knowledge of higher–level poetics as well as the intricacies of poetic form.

MA in Global Literature and Culture
This MA offers unusually wide-ranging exploration of the literary and cultural responses to colonial conquest, anticolonial resistance, postcolonial struggles, and globalisation. You will have the opportunity to study these interconnected histories from the beginnings of European imperialism to the present day, and to choose from modules offered in the Departments of English, History, Politics and History of Art, and in the Centre for Eighteenth Century Studies. Diverse modules explore the complexities of imperial rule and globalisation, encouraging a comparative approach to African, Asian, Irish, Middle Eastern, Caribbean and Pacific responses to colonisation and its residues.

MA in English Literary Studies
Our MA in English Literary Studies is the most flexible of all our MA programmes, and the only one that allows you to select modules from across the whole range offered by the Department. There are no compulsory modules on this MA: you simply choose the two which interest you most in each of the Autumn and Spring Terms. It thus provides exceptional opportunities if you want to work across different literary periods and genres, for example following modules on poetry or drama from the medieval to the modern, or those on gender or space from the Renaissance through to the postmodern. Or you could choose some of our modules on film or postcolonial studies, or, in some cases, select a module from another department – such as History, Politics or Philosophy – and enrich your options even further. Occasionally, we may have to restrict access to some of the core modules if numbers are high, but the aim of this MA is freedom of choice, diversity of modules and interdisciplinary breadth. It is ideally suited to those with wide intellectual appetites!

MA in Medieval Literatures and Languages
The MA in Medieval Literatures and Languages, based at the Centre for Medieval Studies, combines the study of Old and Middle English, and approaches medieval English literature as part of a dynamic, multilingual literary culture in which English interacted with Latin, Old Norse, French and Italian. The MA caters both for those students who wish primarily to study the literature of medieval England and for those who wish to explore other medieval European literatures as well. The MA thus takes full advantage of staff expertise in Latin, Old English, Middle English, Old Norse, Old French (including Anglo-Norman) and medieval Italian, while another area of special focus is palaeography. These language and technical skills are essential for successful medieval research and sensitive, meaningful engagement with primary sources.

MA in Film and Literature
The interdisciplinary MA in Film and Literature examines the lively and symbiotic traffic between literary and cinematic forms (through adaptation, borrowing, versioning, appropriation, resistance). It asks how different media tell stories and how reception communities ‘read’ stories differently according to the medium of presentation and the moment of the telling. Coverage includes recent cinematic releases and early silent cinema, pop culture and high culture, theoretical questions and practical ones, institutional studies and formal aesthetic analysis. All films studied are rooted in their broader cultural, historical, industrial, technological and aesthetic contexts. Modules on offer include the study of British cinema, American film genres (film noir and the Western), literary adaptation in European cinema and more. Students are free to determine the particular film/literature balance of the degree according to their own preferences. This MA would suit those who enjoy studying film and literature, separately and/or in combination, and who wish to go on to doctoral study or to work in writing, reviewing, publishing, arts administration, teaching or other related fields.

MA in Literature of the Romantic Period, 1775–1832
This exciting and popular programme is designed for students with interests in the Romantic period and in late 18th–
I chose York because I was so impressed by the welcoming and innovative research community here. The Humanities Research Centre, a light modern work space, encourages a thriving intellectual exchange between staff and postgraduates. Chance conversations are constantly providing me with new avenues for reading and research. The Department and interdisciplinary centres also support and organise an incredible array of guest lectures, events and forums.”

Environment

**Key information**

**HEAD OF DEPARTMENT**
Professor Mark Hodson

**CONTACT**
Maroula Hill
Website: www.york.ac.uk/environment/postgraduate
Telephone: +44 (0)1904 322999
Email: environment@york.ac.uk
Fax: +44 (0)1904 322998

**ENGLISH LANGUAGE REQUIREMENT**
IELTS 6.5 (6.0 for research programmes) with no less than 6.0 (5.5 for research) in each component, or equivalent (see page 33)
Additionally, IELTS 6.5 in Writing for MSc/Dip in Marine Environmental Management
IELTS 6.5 with no less than 6.0 in each component for MPhil/PhD in Environment and Politics

**Programmes offered**

- MSc/PGDip in Environmental Economics and Environmental Management
- MSc/PGDip in Environmental Science and Management
- MSc/PGDip in Marine Environmental Management
- MSc in Corporate Social Responsibility with Environmental Management
- MSc in Environment (by research)
- MPhil/PhD in Environmental Economics and Environmental Management
- MPhil/PhD in Environmental Science
- MPhil/PhD in Environmental Geography
- MPhil/PhD in Environment and Politics

**Your future**

Postgraduate programmes in Environment focus on developing the skills to tackle environmental issues at local, regional and global levels. This prepares students for a wide range of careers in the environmental sector.

**Environment’s graduate school is truly cosmopolitan and international. You will be embedded within an exciting interdisciplinary research and teaching community that focuses on global environmental issues.**

Environment at York prides itself on its dynamic and friendly engagement with postgraduate students who are drawn from all around the world, and come to York to develop the skills, frameworks and techniques demanded of today’s environmental managers and scientists.

The Department was established in recognition of the need for environmental policymakers, scientists and managers who are equipped to take on the pressing environmental challenges now facing the world. This interdisciplinary ethos is unique among UK university departments and we have a reputation for excellence and innovation at the forefront of environmental research. In 2015, the QS World University Rankings rated the Department in the World Top 100 for Environmental Studies.

Our teaching and research portfolios span the natural, social and economic sciences in a fully integrated and holistic way. Postgraduate teaching is informed by our research, which includes work in areas as diverse as coral reefs, tropical rain forests, atmospheric science, pollution, biodiversity conservation and wildlife management. We have international expertise in environmental science, geography, environmental law and policy, and in environmental and natural resource economics.

Our teaching and curricula are rated extremely highly and we were praised in our most recent Quality Assurance Agency review, in particular for the friendly and open relationships between staff and students, the high level of support and encouragement that students receive and the welcoming and intellectually challenging atmosphere experienced by students.

Many of our modules have input from external organisations such as UK government agencies, private industry and NGOs and these bodies also provide joint research supervision and external placements. This allows us to incorporate real-world and topical issues into our teaching.

The policy focus is further enhanced by the presence of the internationally renowned Stockholm Environment Institute York within the Department. SEI is a world top ten environmental think tank focused on climate risks, managing environmental systems, transforming governance and rethinking development.
Programmes overview

Our taught Masters programmes are designed to provide vocational training for jobs in environmental research, consultancy, academia or business, and in governmental and non-governmental organisations. They also provide a solid foundation for studying for a PhD. The different programmes have slightly different structures (see our website).

Your background

You will be expected to have a 2:1 honours degree, or equivalent, in a subject relevant to your chosen degree. We will also consider applicants with a 2:2 honours degree if they have additional relevant experience. For applicants for Environmental Economics and Environmental Management, basic skills in mathematics and statistics are essential. Applicants without a background in economics may be asked to attend the Summer Session in the Department of Economics and Related Studies described on page 53. For Environmental Science and Management, you will normally have studied a science or engineering subject; for applicants with limited knowledge of environmental science and chemistry, we recommend some pre-course study. For Marine Environmental Management, you should ideally have studied some elements of ecology and/or environmental management.

MSc/PGDip in Environmental Economics and Environmental Management

This programme is led by a range of interdisciplinary staff, including Drs Rudd, Howley and Touza Montero and Professor White. The core modules provide underpinning knowledge in environmental economics as well as appreciation and understanding of the environmental challenges to which economic analysis can be applied. The programme will equip you to incorporate environmental feedbacks into economic decision making in a way that satisfies both ecological managers and economists.

MSc/PGDip in Environmental Science and Management

This programme is led by environmental scientists with an international reputation, Professors Boxall, Brown and Hodson. The compulsory modules provide the fundamental principles of environmental science and their application to environmental management. The programme prepares students for jobs in environmental consultancy and business, in government and non-governmental organisations and in environmental research.

The Department incorporates the Stockholm Environment Institute York and has close links with the Defra Food and Environment Research Agency (FERA). These links provide opportunities for dissertation projects based in the two institutes.

MSc in Environmental Economics and Related Studies

This programme is led by a range of interdisciplinary staff, including Drs Rudd, Howley and Touza Montero and Professor White. The core modules provide underpinning knowledge in environmental economics as well as appreciation and understanding of the environmental challenges to which economic analysis can be applied. The programme will equip you to incorporate environmental feedbacks into economic decision making in a way that satisfies both ecological managers and economists.

MSc/PGDip in Marine Environmental Management

This programme is delivered chiefly by Professor Roberts and Drs Hawkins and Beukers-Stewart, who are at the forefront of marine environmental conservation. The degree addresses the environmental problems affecting the sea and incorporates the latest thinking on how to manage marine resources. It places a strong emphasis on the importance of understanding marine ecosystem structure, function and processes, and how human activities and global change are affecting these. Socioeconomic implications affecting the marine environment are considered in many modules (see our website).

MSc in Corporate Social Responsibility with Environmental Management

Corporate social responsibility and environmental management are becoming key issues for a wide range of businesses and organisations, both in the UK and overseas, as they seek to resolve long-standing operational and competitive challenges using socially and environmentally friendly technologies and processes. The context of the programme is international, reflecting the increasing trend towards the globalisation of business organisation and the transnational nature of environmental problems faced by the corporate sector and regulators and policymakers. The programme is delivered jointly with the York Management School. It is suitable for those aiming for careers in management both in the for-profit and not-for-profit sectors which require an understanding of CSR and environmental management.

MPhil/PhD research degrees

MPhil and PhD research opportunities reflect the wide range in research interests of Environment staff and this is shown in the four named research degrees offered by the Department. The MPhil/PhD in Environmental Economics and Environmental Management would suit those wishing to carry out interdisciplinary research bridging the natural and social sciences. For those whose research

“...”

Ruby, MSc by Research in Environmental Economics

“The MSc by Research in Environmental Economics has given me the freedom to pursue my own research interests in freshwater resources. I've had the opportunity to work with an intergovernmental organisation and experience the process of designing international research projects. The course has been thoroughly enjoyable and, although it's been challenging at times, I have always received great support from the staff. It’s wonderful being surrounded by like-minded people working on exciting projects.”

Ruby, MSc by Research in Environmental Economics
interests are primarily science-based, the MPhil/PhD in Environmental Science is appropriate. The MPhil/PhD in Environmental Geography allows research specialising in earth systems and environmental change. Those who have been awarded a NERC-funded PhD studentship through our ACCE (Adapting to the Challenges of a Changing Environment) Doctoral Training Partnership can register for one of the above three PhD programmes. For those whose research interests include a significant element of political sciences, we offer the joint degree MPhil/PhD in Environment and Politics.

PhD students are supervised either solely or jointly by Environment staff. Joint supervision may also include staff from other departments or research institutes, government departments, the private sector or industry.

We have a highly cosmopolitan cohort of 65 PhD students working in a wide variety of fields and countries. Current titles include The Dynamics of Freshwater Swamps in West Africa; Ecological Interventions for Health Outcomes; Fate and Behaviour of Nanopesticides; Modelling the Impacts of Ozone Pollution in Food Security across Three Continents; Late Holocene Sea-level Change and saline Intrusion; Measuring the Effects of Scotland’s First Fully Protected Marine Reserve; and many more.

Your background
Applicants to the MPhil/PhD programmes should normally have at least an upper second-class degree in a relevant discipline. Preference may be given to those with a Masters degree, but this is not an essential requirement.

Available funding
Prospective PhD students from the UK or EU can apply for support from the Department’s Research Council studentship allocations and also from the University’s studentship schemes. Highly qualified overseas applicants can compete for the University’s Overseas Research Students (ORS) Awards Scheme. The University and the Department also offer specific PhD scholarships funded through external partners.

For more information on funding, please see our website www.york.ac.uk/environment/pg-funding.

The Centre for Health Economics (CHE) is one of the world’s leading health economics research centres. You will join a dynamic group of researchers who place high value on research excellence with a strong and enduring policy impact both nationally and internationally.

Established in 1983, the Centre for Health Economics undertakes high quality research on economic aspects of healthcare and determinants of health capable of application across a range of social, institutional and healthcare settings. The Centre is at the forefront of applied research, teaching and policy applications of health economics, with a national and international reputation.

Our research combines methodological advances to practical applicability across settings including low and middle income countries. Areas where CHE excels include:

- **economic evaluation in health**: our work assessing benefits and costs has been influential in changing the landscape of healthcare research and policy
- **performance assessment**: we are at the forefront of efforts to measure and compare the performance of health institutions
- **productivity**: we undertake methodological and applied research on the measurement of productivity of the health system, regions and hospitals
- **healthcare finance**: we develop methods for the allocation of healthcare funds
- **population health**: we evaluate public health interventions and measure health outcomes, with a particular focus on health inequalities
- **health econometrics**: we apply advanced econometric techniques to problems of health and healthcare.

The Centre’s world-leading research was ranked equal seventh for Public Health, Health Services and Primary Care in the 2014 Research Excellence Framework and 83 per cent of the submission was designated ‘world-leading’ or ‘internationally excellent’. CHE came equal seventh on impact and equal first on research environment. We were awarded a Queen’s Anniversary Prize for our research impact.

**Programmes offered**

- Postgraduate Certificate in Health Economics for Health Care Professionals (by distance learning)
- Postgraduate Diploma in Health Economics for Health Care Professionals (by distance learning)
- MSc in Economic Evaluation for Health Technology Assessment (HTA) (by distance learning)
- MSc in Health Economics
- PhD

**Your future**

Graduates from the MSc in Health Economics work in government departments, research units, national health services, healthcare organisations and the pharmaceutical industry. Recent PhD graduates have secured employment in academic posts within the Centre or at other universities in the UK, Europe and Australia. CHE provides PhD students with a unique opportunity to integrate fully into a research team and to participate in the intellectual life of the Centre.
Programmes overview

Health economics is a major branch of economics that has enabled researchers to influence the way we think about the determinants of health and well-being, and how we approach the organisation and delivery of healthcare. It is, however, not just another academic discipline – it represents an extension of the intellectual toolkit. It is designed for those concerned with the delivery, management and planning of the health system, including clinicians, hospital managers and policy analysts. In short, health economics shapes the way we think about health and healthcare, how we make difficult decisions about priorities, and how we promote longer and healthier lives.

Postgraduate training in health economics has been a strong feature at York and we offer four programmes. The MSc in Health Economics, based in the Department of Economics and Related Studies, offers high-level courses and access to a network of economists and healthcare professionals. The objective of the programme is to produce well-trained economists with the ability to apply their skills to important issues in the field of health economics. The three distance learning programmes offer a more flexible way to study, designed for those working in the healthcare sector and unable to study full-time. In addition to these taught programmes, the Centre for Health Economics has a thriving graduate research programme offering the opportunity for research leading to PhD. Topics are aligned to the interests of the research teams within the Centre.

Distance learning programmes:

PGCert and PGDip in Health Economics for Health Care Professionals

MSc in Economic Evaluation for Health Technology Assessment (HTA)

Together with the Department of Economics and Related Studies and York Health Economics Consortium, the Centre for Health Economics runs the Postgraduate Certificate and Postgraduate Diploma by distance learning and the MSc in Economic Evaluation for Health Technology Assessment (HTA) by distance learning.

These programmes are designed for those working in the healthcare sector who wish to gain an accredited qualification in health economics, but who are unable to study full-time. Students will be able to enrol in the MSc once they have achieved the Postgraduate Certificate and Postgraduate Diploma qualifications.

The Postgraduate Certificate covers the basic principles and tools of health economics to enable students to understand the workplace situations they encounter from an economic perspective and apply basic economic concepts in their work.

The Postgraduate Diploma programme covers the same areas as the Postgraduate Certificate and develops deeper knowledge in specific areas.

The MSc provides training in the theoretical and practical issues of relevance in economic evaluation for HTA. Building on earlier modules, the MSc modules bring the student up to date on recent developments in the research methods. Students are provided with the skills necessary to contribute to pharmacoeconomics and outcomes research to a level consistent with peer-reviewed journal publication. The programmes are based around learning modules. Each module has been designed around a workbook written specially by health economists in York and is supplemented by online learning support for distance learners.

Modules are assessed at the end of the 12-week study period.

The Postgraduate Certificate comprises:
- Module 1: Basic Economic Concepts
- Module 2: Health Economics: Concepts and Analysis

The Postgraduate Diploma comprises:
- Module 4: The Economics of Health Care Systems
- Module 5: Statistics for Health Economics

The MSc comprises:
- Module 7: Assessing the Impact of Medical Technologies on Health
- Module 8: Outcome Measurement and Valuation
- Module 9: Decision Analysis for Health Technology Assessment.

Full details can be found at www.york.ac.uk/economics/postgrad/distance_learning.

Your background

We require an honours degree at 2:1 or higher, or qualifications and/or experience deemed by the University to be of an equivalent standard.

MSc in Health Economics

The MSc in Health Economics is provided by the Department of Economics and Related Studies. It provides a comprehensive training in the theory and practice of health economics and gives students the experience and skills needed for research and health service decision making. Graduates go on to work in government departments, research units, universities, national health services, healthcare organisations and the pharmaceutical industry.

The programme is supported by the Health Economics Resource Centre (HERC) which provides readily available facilities for private study and research, forming a base for students attending the MSc.

The MSc lasts for one year full-time. Coursework runs from October to May. The compulsory core elements are double modules in each of the following:

“...My favourite part about working at the Centre for Health Economics is the people. I work with internationally renowned experts in the field who are always available to give advice and feedback on my research. This inspires me to work at a high standard myself. I’m continually encouraged to contribute, through seminars, teaching and social events, which is great for developing transferable skills for my future career. I always feel that I’m part of the team.”

DINA, PhD IN HEALTH ECONOMICS
Health Economics; Evaluation of Health Care; either Econometrics 1 and Applied Microeconometrics, or Econometrics 1 and 2, or Statistics and Econometrics, or Econometric Methods for Research; either Advanced Microeconomics or Applied Microeconomics; Clinical Decision Analysis, plus one additional optional module.

Most students on the MSc in Health Economics choose to do a summer research placement. It covers the period 1 July to 30 September and is spent preparing a dissertation under the supervision of an experienced health economist. The placements involve the co-operation of many different institutions including academic research units, the NHS and pharmaceutical companies.

The normal entry requirement for the MSc is a 2:1 honours degree in Economics or equivalent. However, many students have other qualifications, including Medicine, Pharmacy and Nursing. The Department of Economics and Related Studies provides a five-week Summer Session in microeconomics and quantitative methods for non-economists (see www.york.ac.uk/economics/postgrad/msc-summers).

Full details can be found at www.york.ac.uk/economics/postgrad/taught-masters/msc-health-econ.

---

**PhD research degree**

The Centre has a thriving PhD research programme with candidates from a number of countries studying a range of issues in health economics. Your studies will be supervised by a senior researcher within CHE. You will enjoy the benefits of being physically located within the Centre, facilitating collaborations with a wide group of researchers and access to computing and research infrastructures, together with remote access to a high-performance computing cluster which holds a range of proprietary software. The Centre runs a number of informal seminar series, for example in quantitative health economics and economic evaluation.

While supervised and located within the Centre you will be registered within the Department of Economics and Related Studies or the Department of Health Sciences depending on the exact nature of your studies. You will be expected to complete all the procedural requirements of your department of registration and will have access to all relevant teaching and research resources provided by the Department.

Further information on these departments can be found in this prospectus.

There are opportunities to study for a PhD in any of the Centre’s areas of research interests and we welcome informal enquiries from potential students.

Details can be found at www.york.ac.uk/che/courses/postgraduate.

**Your background**

We would normally expect you to have an appropriate postgraduate qualification in Economics.

**Available funding**

Home and EU students may be eligible to apply for ESRC studentships for the PhD programme and for the Department of Health studentships available for the MSc programme in Health Economics. The Graduate School in the Department of Economics and Related Studies has available a number of teaching fellowships which provide financial support.

For more information on funding, please see our website www.york.ac.uk/environment/pg-funding.

ENGLISH LANGUAGE REQUIREMENT
IELTS 7.0 with no less than 6.5 in each component, or equivalent (see page 33)

Programmes offered

- MSc in Applied Health Research
- Masters in Public Health (MPH)
- Postgraduate Diploma with Professional Registration in Nursing (Adult) (2 years)
- PGCert in Cognitive Behaviour Therapy Applied to Physical and Mental Health Problems
- PGCert in Health Research and Statistics
- MPhil/PhD in Health Sciences

The Department of Health Sciences is a vibrant, multidisciplinary department rated joint first for our research environment and seventh nationally in Public Health, Health Services and Primary Care (Research Excellence Framework 2014). Our core philosophy is that our teaching and research should improve health and healthcare through the application of evidence-based practice. The Department holds an Athena SWAN Bronze award for its commitment to women in science.

Our graduate school offers full and part-time Masters and PhD programmes in public health and applied health research. Programmes are designed for those wishing to develop and follow a career in health-related research, or in public health and health services. It is also possible to take the majority of modules independently of the full postgraduate programme. We also have a Postgraduate Certificate in Cognitive Behaviour Therapy Applied to Physical and Mental Health Problems and a Postgraduate Diploma in Nursing (Adult).

The Department comprises a number of multidisciplinary research teams, working in many different health-related areas, including cancer epidemiology and cardiovascular health, health services and policy, mental health and addiction, public health and society, and trials and statistics.

Postgraduate students collaborate closely with our world-leading academics on research and current issues, bringing together staff members and graduate students at every stage of their career. Our vibrant intellectual community is further enhanced by seminars and discussion groups. These provide a forum in which graduate students, staff members and external guests present papers for discussion.

The Department is truly multicultural, and our international students form an important part of our community. We welcome students from all over the world.

Future options for successful students are diverse: some remain in the Department as PhD students or researchers, some go on to academic careers in other institutions or non-governmental organisations/charities. Those with clinical backgrounds return to practice and others find employment in public health and health services sectors across the world.

Your future
Programmes overview
The Department offers both taught and research-based postgraduate degrees. Our taught Masters programmes are designed to provide academic and transferable skills, and comprise a number of specialist pathways tailored to reflect students’ interests and training needs. They are offered on a full-time (one-year), a part-time (two-year), or a full-time (two-year) basis. Students registered for an MPH, MSc or MPhil will have the opportunity to carry out a dissertation aligned to one of our research groups in the Department.

Your background
For the Masters programmes applicants will normally need at least a 2:1 honours degree and be able to demonstrate an interest in a field related to their chosen programme of study. Where no first degree is held, a minimum of two years’ relevant experience in an appropriate area is required and/or other applicable qualifications. Each applicant’s suitability for the programme will be assessed on an individual basis and in some cases may involve an interview (telephone or face-to-face) or the submission of a short written piece of work or personal statement.

MSc in Applied Health Research
This programme includes training with the aim of equipping students to design, appraise and conduct research. Students will concentrate on the production, critical appraisal and use of scientifically rigorous research evidence, applied to a range of health-related areas. It is particularly relevant to science and social science graduates and healthcare professionals who wish to develop their health-related research and evaluation skills and to people from any health-related background interested in a career in health services research. On successful completion, graduates will be able to design, conduct, analyse, interpret and disseminate health research. The programme is of value to those who need to assimilate the results of research to provide a sound basis for policymaking and also to those interested in conducting research themselves.

Masters in Public Health (MPH)
This is a taught Masters programme that provides training in public health. There is a strong emphasis on skills and knowledge development, both being essential for practitioners working at the forefront of public health practice. The programme offers a range of modules which will allow people to work in settings across the world, and depending on the modules taken, will be relevant to practice in high, medium and low income countries. The programme reflects current themes in public health policy and practice, addresses core public health skills in epidemiology and population health research, and explores the determinants of major chronic communicable and non-communicable disease around the world. It is of particular interest to those working, or planning to work, at a senior level in health and social care organisations. It provides a solid foundation for those who wish to go on to take the membership examination of the Faculty of Public Health.

Postgraduate Diploma with Professional Registration in Nursing (Adult)
This innovative, two-year, full-time programme for graduate entrants enables them to ‘fast-track’ to professional nurse registration with the Nursing Midwifery Council. Created in close collaboration with health service partners and users, the Postgraduate Diploma combines theoretical modules with clinical placements to prepare graduates for future roles as adult nurses.

Nurses have an essential contribution to make to modern healthcare and its delivery. Our programme supports students to become exceptional registered nurses working in partnership with the public to promote health and provide sensitive, evidence-based care to patients and their carers. Progression to the professional nursing register at postgraduate level enables students to maximise opportunities for recruitment.

The programme is applicable to those who already possess an honours degree and have experience of working or volunteering in a health and social care-related context. A full list of acceptable health-related subjects and experience can be found on our website at www.york.ac.uk/healthsciences/nursing/pg-diploma.

Additional subjects and experiences will be reviewed on an individual basis. Applications are via UCAS.

PGCert in Cognitive Behaviour Therapy Applied to Physical and Mental Health Problems
This part-time programme will empower you to engage more fully with people experiencing long-term conditions (LTCs) and equip you with the necessary Cognitive Behavioural Therapy (CBT) skills to address all aspects of people’s experiences, both physical and psychological. Should you wish to pursue a career in CBT, the PGCert represents a first step towards accreditation by the British Association of Behavioural and Cognitive Psychotherapy (BABCP).

Entry is open to registered healthcare and social care professionals, or equivalent.

PGCert in Health Research and Statistics
This programme builds on the Department’s national and international experience and reputation in health services research.

It aims to equip students with the knowledge and skills required to:
- carry out comprehensive literature searches
- design and conduct high quality health research using appropriate methods and study designs (eg randomised controlled trial, case-control or cohort study, systematic review)
- plan and undertake data analysis using the appropriate statistical methodologies

“I have a thirst for medical knowledge and greater understanding, so York is the ideal place for me. The Department ranks high in the global league tables and has renowned research groups, such as the BHF Cardiac Care and Education Research Group, which hosts the National Audit of Cardiac Rehabilitation, led by my supervisor. My studies and research here will enable me to become a knowledgeable and trusted cardiovascular prevention and rehabilitation specialist, providing evidence-based intervention programmes.”

AHMAD, PhD IN HEALTH SCIENCES
You have the flexibility to tailor your studies to pursue your own research interests and develop the skills you need for your future career.

Bespoke research skills training will be developed alongside your supervisor and thesis advisory panel. Modules can be taken within Health Sciences (often from our Masters provision), from other departments in the University or, if required, courses from outside the University. Many of our MPhil and PhD students follow the multidisciplinary approach of the MSc in Applied Health Research programme.

You will receive academic support from a supervisor and Thesis Advisory Panel. Supervisors are matched to students whose proposed research fits within the research themes of the Department and the research programmes of the academic staff.

Academic research groups within the Department include:
- Public Health and Society
- Health Services and Policy
- Cancer Epidemiology and Cardiovascular Health
- Mental Health and Addiction
- Trials and Statistics.

MPhil/PhD research degrees

The MPhil/PhD in Health Sciences provides the opportunity to develop your research interests and skills in a centre of excellence by undertaking a substantial piece of supervised work that is worthy of publication.

Staff list

Professor and Head of Department

Karl Atkin, DPhil (York)
Healthcare in multicultural societies; social experience of long-standing chronic and disabling conditions; family care and service support

Professors

Karen Bloor, PhD (York)
Medical labour markets; productivity of hospital specialists; healthcare variations; hospital performance

Patrick Doherty, PhD (Manchester)
Cardiovascular disease prevention and rehabilitation; patient self-management approaches in chronic disease

Tim Doran, MD (Liverpool)
Health inequalities; quality improvement; financial incentives in healthcare

Simon Gilbody, MBCChB, PGDip (CBT), DPhil (York), FRCPsych, FRSA
Smoking cessation; improving the health and healthcare of people with severe mental ill health

Hilary Graham CBE, PhD (York), PGCE
Health behaviours; social inequalities in health; public health policy

Catherine Hewitt, PhD (York)
Randomised controlled trials; statistics; systematic reviews; bias; diagnostic reviews; meta-analysis

Jim McCambridge, PhD (King’s College London)
Addictive behaviours; alcohol; public health

Kate Pickett, PhD (Berkeley), FRSA, FFPH
Social determinants of health; health inequalities

Eve Roman, PhD (London)
Epidemiology of haematological malignancies; cancers of children and young adults; adverse reproductive events

David Torgerson, PhD (Aberdeen), DipHE
Methodology of randomised trials

Ian Watt, MB, ChB, MPH, FFPHM
Patient safety; primary care; evidenced-based healthcare; communication in healthcare

Reader

Rob Newton, MBBS, DPhil (Oxford), FFPH
Cancer epidemiology; chronic disease in Africa

Senior Lecturers

Joy Adamson, PhD (Oxford)
Response to symptoms; health and healthcare of older people; qualitative work in randomised controlled trials

Kate Flemming, PhD (York)
Palliative and end-of-life care; smoking in pregnancy; qualitative research; mixed methods research

Available funding

A limited number of funded student places on our taught programmes are available for health professionals working in the NHS in the area covered by the Yorkshire and Humber Strategic Health Authority. Please contact us for details.

The Department will offer some scholarships to PhD students to partially fund living expenses.

Research studentships and teaching assistantships offered through the Department will be advertised at www.york.ac.uk/healthsciences/gradschool/funding.

</table>
Graduate students in the Department of History, whether following a taught Masters or pursuing a research degree, join an intellectually exciting, friendly and wide-ranging academic community which seeks to support every student’s intellectual and professional development.

With over 40 members of academic staff and over 100 postgraduate students in the Department and associated centres, York is one of the largest History departments in the UK. In the 2014 Research Excellence Framework assessment, the Department was ranked second overall for research performance: this assessment reflects not only the world-class quality of its academic staff but also its high-level, stimulating research environment for postgraduate students. The MAs in Medieval, Early Modern and Modern History, in Public History and in Contemporary History and International Politics reflect the unusual chronological breadth of our interests. We have similarly diverse geographical interests, with particular strengths in the history of Europe, North America, the Caribbean, the Middle East, Africa and Asia, as well as in the history of Britain and Ireland. We welcome and support all kinds of approaches to the study of the past, ranging from economic and social history to political, religious, intellectual and cultural history, as well as the histories of science, technology and medicine, of empire and of gender.

Facilities at York for MA and doctoral research are excellent. All postgraduates can use the new purpose-built Humanities Research Centre in the Berrick Saul Building as well as facilities in the Department. The Library, and particularly the Humanities Research Library, has a large and growing set of print, microfilm and electronic research resources for historians. Adjoining it is the Borthwick Institute for Archives, one of the largest archives in the UK, with rich and diverse holdings from the 12th century to the 21st century (see www.york.ac.uk/library/borthwick). The city of York contains many other important repositories such as York Minster Library, York City Archives and the National Railway Museum.

We support and develop all postgraduates’ intellectual and professional skills. MA students follow a core programme of training in research skills and can take other courses in languages and palaeography. Research students follow a course of professional development; most gain teaching experience. Many also follow work placements with heritage and media employers organised in the Department.

Above all, postgraduates play a central role in the Department’s intellectual life, contributing to the seminars and conferences which make York a stimulating place in which to study and research history.

Your future

Graduate students from the Department have a strong record of securing posts in the higher education sector and in cultural industries.
Programmes overview

The Department offers a range of taught MA programmes and is involved in the interdisciplinary degrees listed below. You can do them either full-time in one year or part-time over two years. All the taught MA programmes include a core course, two or three option modules, a core training programme in research skills, ancillary skills courses (where appropriate), and a substantial research dissertation of up to 20,000 words.

The Department offers a full range of research degrees. As we are a large department, we can and do supervise work in many areas of history.

Your background

All our programmes are intended to be of interest to home and overseas candidates who (a) are seeking a basis for further research in History or related disciplines, or (b) are wanting to extend their interests after an undergraduate course through a short period of further research before embarking on other careers, or (c) are teachers or other professionals (such as museum curators) in a field related to the subject matter of the programme they wish to follow and who are looking for a year’s advanced study leading to a further qualification.

Candidates for admission to postgraduate degree programmes usually have a 2:1 honours degree or its equivalent in an appropriate subject, and most candidates for PhDs have completed an MA. However, we consider applications on an individual basis and invite candidates to visit the Department for an informal interview wherever possible.

MA in Medieval History

The MA in Medieval History builds upon York’s international reputation in medieval studies, and provides thorough research training and an opportunity to explore new approaches to the medieval history of England, Europe and the wider world. Particular emphasis is laid upon working with primary sources.

The MA is structured in two stages. The taught element of the MA spans the Autumn and Spring Terms, when you will follow a core programme and two option modules. The core module will introduce you to key historiographical debates and to major new scholarly areas. Option modules may include:

- Saving the Sinners: The Medieval Church and the Laity
- England’s Empire in France, 1417–53
- Medieval English Civil Archives
- Medicine and Culture in Western Europe
- The Frontiers of Reason, 1200–1450.

The second (research) stage comprises the preparation, researching and writing of the dissertation with additional specialist guidance from a supervisor. You will also have an opportunity to study Medieval Latin and to acquire paleographical and related technical skills.

MA in Early Modern History

Taking as its context Britain, Europe and the wider world, this programme aims to enhance awareness of key historiographical and methodological debates in social, cultural, political and religious history, 1500–1750. It provides unusual opportunities for interdisciplinary work through options in English or History of Art, as well as the opportunity to engage with primary material from the rich archival and print resources available in York. During the first term you will study a core module and an option module. The core module examines key themes and debates, addressing topics such as popular political culture, witchcraft, violence and honour, gender and sexuality and the nature of belief. Additional training courses are available for developing specific skills. During the second term you will take two option modules. Options may include:

- Body Politics in Contemporary Literature
- Witchcraft and Gender in Early Modern England
- Enjoying the Saints: Sanctity and Society
- History and Theory: The Case of Shakespeare

In the second half of the MA, you will research and write a dissertation under the supervision of a member of staff.

MA in Modern History

The MA in Modern History covers the 18th to 20th centuries and combines an advanced-level introduction to the methodologies and techniques of modern history together with a choice of thematic taught modules. During the Autumn Term you will take a common core module examining key themes and historiographical debates in modern history including histories of commemoration, political violence and consumer society, and an option module. In the Spring Term you will take two further options from a range of modules offered by staff in the Department. These may include:

- Origins of the Global South since 1947
- Exotic Animals in Europe, 1650–1850
- Twentieth-century China
- The Soviet Empire: From Creation to Collapse
- Black Market Europe.

From the beginning of the Summer Term you will concentrate on your research dissertation of up to 20,000 words, supervised by a member of staff.

MA in Public History

The MA in Public History offers students cutting-edge interdisciplinary academic training together with exciting opportunities for hands-on experience in the cultural sphere through a placement in the heritage sector. The programme is designed to give students an understanding of the critical issues in public history and to analyse the variety of changing ways in which the public engage with the past through not only traditional media, but also new digital and rich media products.

The MA will consist of a core module, which introduces students to the discipline of public history, and option modules, which will be combined with work placements at a prestigious heritage or media institution such as York Minster, English Heritage or BBC Radio York, and at cultural attraction companies such as Continuum and Visit York. Elective modules may include:

- Contemporary Issues in Film and Television
- Art and Imagery in York Minster
- Digital Publications and Web Technology.

The MA is linked to the Institute for the Public Understanding of the Past; see www.york.ac.uk/ipup.

MA in Contemporary History and International Politics

This degree provides a foundation for graduate-level research into contemporary history (c1900 to the present) and international politics. It offers a range of stimulating modules to equip you with the specialist knowledge and understanding needed to develop your interests in and make important contributions to your chosen field(s). These modules address themes reflecting the expertise of staff in the Departments of History and Politics, exploring the methods and theories associated with the study of modern political organisation and ideas. You will use these as the springboard for a dissertation by independent study, involving the collection and analysis of primary sources and their interpretation with reference to existing scholarship in one or both of the disciplines jointly studied in your degree.

Elective modules may include:

- Russian Foreign Policy from Alexander I to Vladimir Putin
MA in Medieval Studies
The MA in Medieval Studies provides an introduction to the interdisciplinary study of the medieval cultures of Europe, taught by members of the Departments of Archaeology, English, History and History of Art. For more information see the entry for the Centre for Medieval Studies on page 113.

MA in Renaissance and Early Modern Studies
The MA in Renaissance and Early Modern Studies is an interdisciplinary MA studying the 16th and 17th centuries. It is taught by members of the Departments of History, English and Related Literature, History of Art and Archaeology, plus five other humanities departments, and brings together the wide range of disciplinary perspectives which enrich research in this period. It is based in the Centre for Renaissance and Early Modern Studies. For further information see page 145.

MA in Eighteenth Century Studies
This interdisciplinary programme, involving the Departments of Archaeology, English, History and History of Art, offers the opportunity for you to study the culture and cultural history of the period 1750–1850 from a range of new perspectives. It is based in the Centre for Eighteenth Century Studies. For further information see page 59.

“...enrichment for postgraduate research. I’ve benefitted enormously from attending research seminars, discussing my work, meeting visiting academics, and gaining teaching experience. Getting involved in the University’s wider research community has enabled me to work collaboratively with related disciplines and to broaden the scope of my research.”

ROBIN, PhD IN HISTORY

MA in Culture and Thought after 1945
This interdisciplinary programme is based in the Centre for Modern Studies. For details see page 116.

MA in Medical History and Humanities
Offered by the Departments of English and History, this exciting new MA explores historical, literary, social, cultural and ethical understandings of health, illness, well-being, biomedical sciences, medicine and nature, as well as the links between history, the humanities and health development policy. The programme brings together approaches from different disciplines, periods and geographical regions to offer a distinctively international perspective. As a student at York you will engage closely with the activities of the Centre for Global Health Histories, which is also the WHO Collaborating Centre for Global Health Histories.

All students follow an innovative core programme that explores critical questions about research methodologies and defining medical humanities. You will also study three optional modules on themes such as:
- The history and politics of international and global health
- Historical and anthropological approaches to understanding popular health practices
- The globalisation of sciences and medicines
- Religious missions and healthcare
- Body politics in contemporary literature.

You will also be given an opportunity to choose some taught options made available by the Department of Health Sciences. In the Summer Term, you will work closely with a supervisor to complete a dissertation on a relevant research topic of your choice.

Postgraduate Diploma in History, Heritage and Fabric of the English Parish Church (by distance learning)
Accredited by the Institute of Historic Building Conservation

This two-year, part-time programme is ideal for anyone wanting to extend their knowledge of the history of parish churches, both architectural and social, but who is unable to commit to an on-campus course. Delivered via the University’s virtual learning environment (VLE), the programme requires access to a broadband internet connection (c12–16 hours per week), but does not require you to be online at specific times. There is an optional summer school weekend where you can meet other students and experience York’s exceptional range of churches in the company of experts.

We expect previous experience of study at a suitable level. We welcome applications supplying accredited prior learning, professional experience and a demonstration of the ability to work at Postgraduate Diploma level, in the absence of a first degree; we also welcome applications from students who have been out of formal education for some time or whose qualifications do not fit conventional models. Applications will be assessed on an individual basis.

MA in History (by research)
For an MA by research you will research and write a dissertation, of up to 40,000 words, under the supervision of a member of the Department. The dissertation must be submitted within one year of full-time or two years of part-time study, during which time you will see your supervisor regularly. Students who achieve the requisite standard may seek to be upgraded to the MPhil programme.

MPhil/PhD research degrees
MPhil/PhD research degrees in History are offered both in the Department and in the context of its associated interdisciplinary centres and institutes. You can study for them full- or part-time. To be admitted for them full– or part–time. To be admitted for this programme you will normally have, or be expected to obtain, a 2:1 honours degree or its equivalent in an appropriate subject.

You will be confirmed as a PhD student after submitting suitable written work and a thesis plan in your second year. We welcome applications in the research areas of staff...
members, outlined below. Fuller details of these interests and the kinds of research topics they have supervised are outlined on their individual web pages. If you have an enquiry about a particular research interest, please contact the Department Postgraduate Administrator, specifically indicating the member(s) of staff with whom you wish to work and your own background in the proposed area of research.

### Available funding

Applicants for PhD degrees will be eligible to apply for funding from the AHRC through the White Rose College of the Arts and Humanities. Details of how to apply and of eligibility are at [www.wrocah.ac.uk/funding](http://www.wrocah.ac.uk/funding). Project-specific research studentships are advertised from time to time. The Department will offer a number of bursaries for MA and PhD students. You can find out about University and Department awards, scholarships and studentships from our website, [www.york.ac.uk/history/pg-funding](http://www.york.ac.uk/history/pg-funding), and from the Department’s Admissions Administrator.

The Department is eligible for ESRC studentships for doctoral students, covering fees and a living allowance.

### Staff list

#### Head of Department

**Henrice Altink, PhD (Hull)**  
African–American and Caribbean history; slavery; gender and sexuality, 1800–1950

#### Professors

- **Sanjoy Bhattacharya, PhD (London)**  
  19th- and 20th-century South Asia; history of medicine; global health programmes
- **Peter Biller, DPhil (Oxford)**  
  Medieval heresy; condition of women; social history of medicine
- **Lawrence Black, PhD (London Guildhall)**  
  Modern political culture; consumerism
- **Stuart Carroll, PhD (London)**  
  Early modern France; neighbourhood in 16th- and 17th-century Europe
- **Catherine Cubitt, PhD (Cambridge)**  
  Anglo-Saxon history; early medieval religious and cultural history; gender
- **Simon Ditchfield, PhD (London)**  
  Early modern historiography and hagiography; Italian ecclesiastical and cultural history
- **Guy Halsall, DPhil (York)**  
  Merovingian Gaul; early medieval European history; barbarian migrations
- **David Moon, PhD (Birmingham)**  
  Russian and Ukrainian history; 18th–20th-century peasants and environmental history
- **Mark Ormrod, DPhil (Oxford)**  
  Political and administrative history of later medieval England
- **James Sharpe, DPhil (Oxford)**  
  Early modern crime; witchcraft; popular culture; the family
- **Miles Taylor, PhD (Cambridge)**  
  19th- and 20th-century political British history; the impact of Empire
- **David Wootton, DPhil (Oxford)**  
  Intellectual history, 1500–1800; political thought

#### Readers

- **Geoffrey Cubitt, PhD (Cambridge)**  
  Memory and commemoration; public history; political and cultural uses of the past
- **Jeremy Goldberg, PhD (Cambridge)**  
  Medieval English social structure, demography, women, family
- **Mark Jenner, DPhil (Oxford)**  
  Early modern English history; social history of medicine; the body
- **Craig Taylor, DPhil (Oxford)**  
  Politics and ideas in medieval France and England; chivalry; warfare

#### Senior Lecturers

- **David Clayton, PhD (Manchester)**  
  Modern British and Chinese economic history; post-1945 international history
- **John Cooper, DPhil (Oxford)**  
  Political, religious and literary culture of Early Modern Britain
- **Natasha Glaisyer, PhD (Cambridge)**  
  Cultural history of commerce in the 17th and 18th centuries
- **Joanna de Groot, DPhil (Oxford)**  
  Gender, race and empire; 19th–20th-century India and Iran
- **Catriona Kennedy, PhD (York)**  
  18th- and 19th-century Britain and Ireland; gender, war and revolution
- **Shane O’Rourke, DPhil (Oxford)**  
  Russian history in the late 19th and 20th centuries
- **Sarah Rees Jones, DPhil (York)**  
  Later medieval English social, economic and urban history
- **Mark Roodhouse, PhD (Cambridge)**  
  20th-century British social, cultural, economic and political history; crime; consumption
- **Sethina Watson, DPhil (Oxford)**  
  Social history of religion, 1050–1350; medieval hospitals

#### Lecturers

- **Tara Alberts, PhD (Cambridge)**  
  Encounters and exchange between Europe and Asia; health and medicine
- **Oleg Benesch, PhD (British Columbia)**  
  History of 19th- and 20th-century Japan
- **Sabine Clarke, PhD (London)**  
  20th-century history of science; technology and medicine; colonial development
- **Helen Cowie, PhD (Warwick)**  
  Cultural history of science; history of animals
- **Mary Garrison, PhD (Cambridge)**  
  Early medieval literature and cultural history
- **Hannah Greig, PhD (London)**  
  The social, political and material history of Britain, c1688–1830
- **Jasper Heinzen, PhD (Cambridge)**  
  History of modern European nationalism; the Napoleonic Wars; prisoners of war
- **Jonathan Howlett, PhD (Bristol)**  
  Modern Asian history; modern China, 1840–2012
- **David Huysmans, PhD (Yale)**  
  Inequality and new capitalisms in the 20th century
- **Gerard McCann, PhD (Cambridge)**  
  20th- and 21st-century Africa and India; global south; transnationalism
- **Shaun Mitelpunkt, DPhil (Chicago)**  
  Cultural politics of US–Israeli relations; the history of war and masculinity
- **Harry Munt, PhD (Oxford)**  
  History of the Islamic world; medieval Arabic history writing
- **Chris Renwick, PhD (Leeds)**  
  19th- and 20th-century natural and social sciences
- **Lucy Sackville, PhD (York)**  
  12th- and 13th-century religious history
- **Nitin Sinha, PhD (SOAS, London)**  
  History of modern South Asia; transport and communication; labour; agroecology
- **Christopher Webb, MA (York)**  
  Church and society in early modern England; editing historical documents
- **Sophie Weeks, PhD (Leeds)**  
  Natural philosophy in the 15th and 16th centuries
History of Art

ENGLISH LANGUAGE REQUIREMENT
IELTS 7.0 with no less than 6.0 in Writing for taught degrees, or 6.5 for research degrees, and no less than 5.5 in all other components, or equivalent (see page 33)

Programmes offered

MA in History of Art
MA in History of Art (Architectural History and Theory)
MA in History of Art (British Art)
MA in History of Art (Medieval Art and Medievalisms)
MA in History of Art (Modern and Contemporary Art)
MA in History of Art (Sculpture Studies)
MA in Stained Glass Conservation and Heritage Management
MA in Medieval Studies
MA in Renaissance and Early Modern Studies
MA in Eighteenth Century Studies
MA in Culture and Thought after 1945
MA in History of Art (by research)
MPhil/PhD

As one of the largest History of Art departments in the UK, with staff actively researching the Western tradition from late antiquity to the contemporary, we offer opportunities for postgraduate study and research across an exceptional range of fields and methodologies.

We offer a supportive and stimulating environment for all our students, who join us from the UK and across the world. As a student you would benefit from:

- world-leading teaching and research
- teaching by distinguished visiting scholars
- a large and dynamic postgraduate community
- partnerships and close links with local and national galleries and museums.

Our active community of postgraduate students, one of the largest in the country, benefits from internationally significant research, with renowned concentrations of expertise in the Medieval, Early Modern and Modern periods. In the 2014 Research Excellence Framework assessment, the Department was ranked third for overall research performance against other History of Art departments.

The Department’s research schools regularly organise research seminars, study days and visits. You may take advantage of the events connected to the interdisciplinary research centres in Medieval, Renaissance and Early Modern, Eighteenth Century and Modern Studies.

At York you will benefit from the University’s location in one of the country’s most attractive cities, renowned for its medieval and Georgian architecture. In the immediate vicinity, monasteries, churches, castles and great country houses provide an excellent resource for the study of art and architectural history in its cultural and social context. The region boasts the largest concentration of Anglo-Saxon sculpture in the UK and the Department has close relationships with the Henry Moore Institute for the Study of Sculpture and the Yorkshire Sculpture Park. York’s efficient transport links offer easy access to national and regional collections further afield. You would also benefit from the extraordinarily wide range of libraries and archives in and around York.

Your future

York History of Art graduates leave us with a wide range of discipline-specific and transferable skills, providing them with an excellent platform from which to pursue their chosen careers. As a result, our graduates go on to work in diverse roles within the UK and across the world, including auctioneering, curating, conservation, teaching, journalism, librarianship and research; and many go on to further study.
Programmes overview

We offer seven taught MA programmes: an MA in History of Art, an MA in Stained Glass Conservation and Heritage Management, and five MA pathway degrees. Our academics also contribute to the teaching of four interdisciplinary MA programmes in Medieval Studies, Renaissance and Early Modern Studies, Eighteenth Century Studies, and Culture and Thought after 1945. Research degrees are offered at MA, MPhil and PhD levels.

MA in History of Art

Our general taught MA programme allows great flexibility, enabling you to focus on a historical period from medieval to contemporary art, to follow a thematic strand or to pursue a diverse range of interests. It can be taken over one year full–time or two years part–time.

You will choose four option modules to take over your first two terms. The modules offered vary from year to year, but enough choice is normally available for students with particular research interests to focus on those periods or themes of most relevance to them. Modules are taught by weekly seminars and each option is assessed by a 4,000–word essay produced under tutorial supervision.

You will also take a core Research Skills module alongside your option modules. This will help you make the transition to graduate research, introduce you to research going on in the Department and help you to relate in a more original, critical and significant way to the problems, methodologies and latest insights from the forefront of the discipline. During this module you will develop your dissertation research proposal, which forms the assessment for the module. Your third term and summer vacation are devoted to the research and writing of your 15,000–20,000–word dissertation, for submission in mid–September.

Pathway degrees

We offer specialised MA pathway degrees in Architectural History and Theory, British Art, Medieval Art and Medievalisms, Modern and Contemporary Art, and Sculpture Studies. Each pathway provides a comprehensive foundation for PhD research in a particular area, or a specialised career. The course structure and assessment mirror the general MA in History of Art, but you take at least two of your four taught modules from a prescribed list of relevant modules and your dissertation should also focus on a related topic.

Your background

You will have a 2:1 honours degree, or equivalent, in a humanities subject. If you have studied a practice–based degree (eg Fine Art) you will need to demonstrate capability in academic writing. If you have a different educational background, do not be discouraged from applying; all candidates are recommended to contact the Graduate Chair about possible applications.

MA in Stained Glass Conservation and Heritage Management

York is the premier centre in Britain for the study of stained glass, with unmatched resources in the Minster and city churches, leading conservation studios and the Department’s lively Stained Glass Research School. This innovative programme, the first of its kind in the English–speaking world, offers an integrated study of stained glass and its conservation. Taught in partnership with the Department of Archaeology, the programme provides training for a variety of employment in stained glass conservation workshops, heritage management, arts administration, architectural and engineering offices, administration of historic buildings and museums, and for higher research degrees.

This two–year programme includes four terms of taught courses, with two modules per term, an 18–week placement and a five–month dissertation. Two modules are devoted to glass conservation. Other fields of study include ethics and the philosophy of conservation, history of conservation, art and architectural history, archaeology, materials and materials science, building engineering, architectural climate study, administrative training and heritage and business administration. Leading conservation studios in Britain, Europe and the United States will host placements, providing you with valuable work experience. Variations on the degree may be feasible if you wish to avoid the placement and/or the dissertation.

Your background

You may be a graduate with an undergraduate degree (2:1 or equivalent) in a related field (eg glass conservation, wall–painting conservation, art history, architecture, archaeology), or you may not have a degree, but have exceptional experience or skills which you can demonstrate in an entrance test. For those lacking previous experience in glass conservation, preliminary placements can be arranged, and some funding will be available for this from ICON, the UK’s national confederation of conservators.

MA in Medieval Studies

This programme, taught by members of the Departments of Archaeology, English, History and History of Art, provides an introduction to the interdisciplinary study of the medieval cultures of Europe. For further information, see the Centre for Medieval Studies entry on page 113.

MA in Renaissance and Early Modern Studies

This interdisciplinary programme, which allows students to study modules from relevant MAs in a number of partner departments, gives a thorough grounding in the issues relating to the study of the 16th and 17th centuries. For further information, see the Centre for Renaissance and Early Modern Studies entry on page 145.

“The Department offers student partnerships with museums and galleries and I’ve gained invaluable curatorial and museological experience with the Hepworth Wakefield gallery. Working there has complemented my studies in ways I never expected, such as being able to make contributions in seminars based on first–hand experience of museum work. This has helped shape my career goals and I now have a degree that will give me a real advantage in the job market.”

MADELINE, MA IN HISTORY OF ART
MA in Eighteenth Century Studies
This programme, taught by members of the Departments of Archaeology, English, History and History of Art, offers the opportunity to study the culture and cultural history of the period 1750–1850. For further information, see the Centre for Eighteenth Century Studies entry on page 59.

MA in Culture and Thought after 1945
This programme, taught by members of the Departments of English, History, History of Art, Philosophy, Theatre, Film and Television, and the Centre for Women’s Studies, offers a unique opportunity for study of the intertwined theoretical, cultural and historical developments of the contemporary period. For more information, see the Centre for Modern Studies entry on page 116.

MA in History of Art (by research)
This is a one–year full–time or two–year part–time degree, based on the production of a 30,000–word dissertation, supervised by a member of staff. This MA is a research degree in its own right which could, in certain circumstances, lead to upgrading to an MPhil. Students meet regularly with their supervisors throughout the year, but ultimately have personal responsibility for defining their topics and seeing them through to successful completion.

Your background
Candidates should normally have, or be expected to obtain, a 2:1 honours degree or equivalent in an appropriate subject with a thorough grounding in the discipline and a clearly defined research topic which falls within one of the Department’s research areas. You should be prepared to work independently from the outset, as there is no taught element to this MA.

MPhil/PhD research degrees
The degrees of MPhil and PhD are awarded on the basis of a thesis of 60,000 and 90,000 words respectively. Students’ registration at PhD level is confirmed, usually within the second year of study, after demonstrating sufficient progress. You will also take part in a training programme designed to develop key skills for an academic or professional career.

Your background
You should be able to demonstrate clear potential for higher–level research, either having completed or currently taking an MA in History of Art or a closely related subject. You are encouraged to contact the PhD Director or a potential supervisor to discuss possible proposals and supervisors.

Available funding
A range of opportunities is available to home, EU and overseas applicants at MA and PhD level. Please see our funding website for details: www.york.ac.uk/history-of-art/prospective-postgraduates/funding.

Staff list

Professor and Head of Department
Elizabeth Prettejohn, PhD (London) Victorian painting, sculpture, art criticism; classical reception; aesthetics 1750–present

Professors
Tim Ayers, PhD (London) Late medieval stained glass, sculpture and architecture in England
Whitney Davis, PhD (Harvard) Theories of visual culture and world art studies
Jason Edwards, PhD (Cambridge) British Victorian art, especially Aestheticism and the ‘New Sculpture’
Helen Hills, PhD (London) Architecture, gender and sexuality; Baroque architecture and urbanism
Christopher Norton, PhD (Cambridge) Medieval art and architecture, especially of the monastic orders
Michael White, PhD (Essex) European modernism, especially the interwar avant–gardes

Readers
Jane Hawkes, PhD (Newcastle) Early medieval (insular) art and architecture, especially sculpture
Amanda Lillie, PhD (London) Italian Renaissance art and architecture, especially villas and landscapes

Senior Lecturers
Jo Applin, PhD (London) Modern and contemporary art and theory
Sarah Brown, MA (York) Stained glass and the history of its restoration and reception
Anthony Geraghty, PhD (Cambridge) Late 17th– and early 18th–century British architecture
Jeanne Nuechterlein, PhD (Berkeley) 15th– and 16th–century northern art; religious painting and portraiture
Cordula van Wyhe, PhD (London) 17th–century Baroque art, particularly in the Habsburg Netherlands and France

Lecturers
James Boaden, PhD (London) American art from the mid–20th century
Richard Johns, PhD (York) British art 1650–1850; painted interiors; landscape and marine painting
Emanuele Lugli, PhD (New York) Mediterranean medieval art and architecture; history of technology; connoisseurship
Hanna Vorholt, PhD (Berlin) Medieval art, particularly illuminated manuscripts, maps and diagrams, and Jerusalem
Human Rights (Applied)

The Centre for Applied Human Rights (CAHR) is an interdepartmental research and teaching centre with links to the Department of Politics and York Law School. It also hosts a unique fellowship scheme for human rights defenders at risk.

The Centre for Applied Human Rights (CAHR) at the University of York is distinctive in the way it integrates the practice of human rights into an academic setting. Its core activities are:

- hosting human rights defenders at risk, who complete training and educational programmes and contribute to the activities of the Centre
- running an MA in Applied Human Rights and an LLM in International Human Rights Law and Practice
- running a PGCert in Defending Human Rights (online) and individual online distance learning modules for human rights defenders for continuing professional development
- conducting research, often in collaboration with non-governmental organisations, in the following areas: practical challenges facing human rights defenders; human rights and development; transitional justice; legal empowerment; responsibility to protect; and refugee law
- hosting the Journal of Human Rights Practice.

The practice of human rights currently faces two key challenges. First, the recent proliferation of treaties and adjudicative bodies has not significantly diminished serious human rights abuses. Second, while human rights is subject to critique on familiar territory, such as civil liberties in the post-9/11 era, it is expanding rapidly into new areas, such as development and environmental protection. This context provides exciting new opportunities and strategic dilemmas. Our teaching programmes are designed in such a way that students leave with a sense of how to advance human rights claims in this challenging context.

Your future

Skills gained in the programmes have opened doors to a range of career opportunities in:

- government (the UK Foreign and Commonwealth Office)
- NGOs (around the world including in Australia, Ireland, Malaysia, Switzerland, South Africa, Turkey, Uganda and the UK)
- international agencies (UNDP, UNHCR and others)
- research (think tanks, NGOs and academia).
Programmes overview

The Centre offers an interdisciplinary MA in Applied Human Rights and an LLM in International Human Rights Law and Practice. Both degrees have a strong practical focus, and are explicitly designed to equip students with the applied skills needed to work for intergovernmental agencies (such as the UN), NGOs, governments or in other relevant professions (eg journalism). Both degrees also include an international field visit, or an opportunity to work with a UK-based NGO, which is fully integrated into the teaching programme. Masters-level programmes are taught by a mix of Centre staff and experienced practitioners.

We also offer an online Postgraduate Certificate in Defending Human Rights designed for human rights defenders and those who protect and assist them. This programme helps students to build the knowledge and skills needed for effective human rights work under challenging circumstances. This programme is delivered entirely online in a fully supported environment.

Your background

People from diverse academic backgrounds are encouraged to apply. Applicants are expected to have a good first degree (2:1 or its equivalent) and/or relevant work experience. For students whose first language is not English, the Centre normally requires a minimum English language proficiency level of 6.5 (with no less than 6.0 in each component) in IELTS.

MA in Applied Human Rights

The MA is distinctive in that students:
- develop a range of fieldwork, advocacy and legal skills through the course of the year
- apply these skills during a field visit to South Africa or a placement in the UK, where they work in partnership with local NGOs
- interact with international human rights defenders based at the Centre
- benefit from a genuinely interdisciplinary approach to the study of human rights.

The MA is both interdisciplinary and practice-based. It focuses on the use of rights within the human rights mainstream and in a range of related fields (development, transitional justice, etc.). As such, it is designed for practitioners and would-be practitioners across this spectrum who wish to engage with applied human rights.

The MA includes a field visit to Cape Town, South Africa (or a UK-based placement). The field visit involves working on a project, developed in collaboration with local partner organisations. Past projects have included developing and evaluating training materials on sexual violence; monitoring of xenophobic violence and displaced people; and capacity-building work with grassroots women’s groups.

The field visit will involve an additional cost, above normal fees, of between £1,250 and £1,400, subject to cost increases.

The MA is one year for full-time students, or two years for part-time students.

A Postgraduate Diploma in Applied Human Rights is available to those students who do not wish to complete the dissertation. MA students need to complete five modules: two compulsory in the first term; one compulsory running over two terms; two options in the second term. A dissertation will fulfil the requirements for an MA.

Part-time students in Year 1 will usually complete two compulsory modules in the Autumn Term and one optional module in the Spring Term. In Year 2, part-time students will complete the two-term compulsory module (including the South Africa field visit or a UK placement), their second optional module and the dissertation.

The following modules are compulsory:
- Defending Human Rights
- Social Sciences and Human Rights Practice
- International Human Rights Law and Advocacy
- Dissertation.

Students must take two optional modules (all options subject to availability):
- Asylum, Migration and Human Trafficking
- Conflict and Development
- Contemporary Issues in Toleration
- Culture and Protest
- Global Governance
- Globalisation and Social Policy
- Governing for the Environment
- Law and Social Control
- Peace Agreements: Ending Intra-state Conflicts
- Teaching and Learning Citizenship and Global Education
- Truth, Justice and Reparations after Violence
- Women, Citizenship and Conflict.

LLM in International Human Rights Law and Practice

The LLM is distinctive in that students:
- work on real human rights issues which gives practical skills, hands-on experience and improved job prospects
- get the opportunity to work alongside human rights defenders during a two-week placement in either Malaysia or the UK
- learn from international human rights defenders based at the Centre.

The LLM will engage students in a critical and nuanced examination of human rights law, while providing them with the practical knowledge necessary to apply global norms at the local level.

The LLM includes a two-week field visit to Kuala Lumpur, Malaysia, or a placement in York. The field visit gives students the experience of working with local partner organisations, and an opportunity to become involved in international and domestic human rights litigation and to conduct legal research, monitoring and advocacy.

Past projects in Malaysia include:
- developing a legal brief for women’s groups to use to obtain standing in proceedings affecting women’s rights in Malaysian courts;
- drafting a guide for policymakers on the international and domestic labour standards governing migrant workers; and
- developing a policy framework and standard procedures for local governments interested in combating

“...The applied nature of this MA sparked my interest to apply to York and it remains the most enjoyable aspect of the course. The opportunity to work with academics, human rights defenders and students with a passion for human rights and from all around the world is quite unique. Their experiences, questions and opinions coupled with my practical experiences have driven me to keep on asking questions, and keep on learning.”

AMY, MA IN APPLIED HUMAN RIGHTS
trafficking. Past projects in the UK include: conducting research on the human rights situation in Mali for International Service; and doing a human rights needs assessment for the York Human Rights City project.

The Malaysia field visit will involve an additional cost of between £1,000 and £1,250, subject to cost increases.

The LLM is one year for full-time students and two years for part-time students. A Postgraduate Diploma is available to those students who do not wish to complete the dissertation.

LLM students need to complete five modules (two compulsory in the first term; one compulsory running over two terms; two options in the second term). A dissertation will fulfill the requirements for the LLM.

Part–time students in Year 1 will usually complete two compulsory modules in the Autumn Term and one optional module in the Spring Term. In Year 2, part–time students will complete the two–term compulsory module (including the Malaysia field visit or a York placement), their second optional module and the dissertation.

The following modules are compulsory:
- Defending Human Rights
- International Human Rights Law and Advocacy
- Applying International Human Rights Law
- Dissertation.

Students must take two optional modules (all options subject to availability):
- Asylum, Migration and Human Trafficking
- Clinics in Context: Street Law
- Conflict and Development
- Contemporary Issues in Toleration Culture and Protest
- Corporate Responsibility and the Law
- Financial Citizenship and Social Justice
- Global Governance
- Governing for the Environment
- Law and Social Control

- Peace Agreements: Ending Intra–state Conflicts
- Teaching and Learning Citizenship and Global Education
- Truth, Justice and Reparations after Violence
- Women, Citizenship and Conflict.

**PGCert in Defending Human Rights (online)**

The PGCert is distinctive in that students:
- develop core knowledge and practical skills required for human rights work in difficult environments
- interact with other human rights defenders and practitioners from around the world
- learn through a number of creative activities, including listening to audio–visual lectures, discussing human rights problems online, working through case studies, reflecting on personal experiences, reading articles, and writing practical assignments and essays.

The PGCert focuses on how human rights work is conducted effectively under challenging circumstances. It provides students with a comprehensive overview of the international human rights regime from an advocate’s perspective. It examines how human rights defenders assess risk, manage security, and engage in protection measures for themselves and others. It reviews principles and skills needed for effective leadership and the management of human rights organisations.

The PGCert is a ten–month, part–time programme delivered entirely online by lecturers and tutors with practical experience. Students are expected to complete three compulsory modules, each of which requires 200 hours of work spread over 13 weeks. The three modules are:
- International Human Rights Law
- Practical Advocacy: Human Rights and Advocacy
- Working Safely: Managing Risk and Strengthening Protection
- Leading and Managing Effective Human Rights Organisations.

Students will need access to a personal computer with Internet connection. For reasonable user experience, broadband connection of at least 1MB is preferred.

**MPhil/PhD**

The MPhil and PhD are awarded on the basis of a thesis after a period of two and three years’ study respectively. Students accepted for research will normally be expected to have a good degree, typically a 2:1 or equivalent. Applications for the MPhil or PhD will be welcomed in the research areas outlined below and on other human rights–related topics.

Our current research projects include:
- Transformative Justice
- Responsibility to the Story
- Refugees, Rights and Revolution
- Human Rights Cities
- Improving Protection and Capacity for Human Rights Defenders
- Writing Refugee Law in Asia and the Middle East
- Legal Empowerment and Transitional Justice
- Responsibility to Protect.

Both the MPhil and PhD may be studied part–time, the period of study being four and six years respectively.

All MPhil and PhD students are required to pursue an appropriate research training taught course (full details from the Centre).

**Available funding**

For information about potential funding opportunities visit www.york.ac.uk/cahr.

---

**Staff list**

**Professor and Head of Centre**

Paul Gready, PhD (SOAS)  
Transitional justice; human rights and development

**Senior Lecturer**

Lars Waldorf, JD (Harvard), PhD (Galway)  
Transitional justice; international criminal law; legal empowerment; Responsibility to Protect

**Lecturer**

Martin Jones, BA (Queen’s, Canada), LLB (UBC)  
Refugee law and policy

**Research and Teaching Fellows**

Juliana Mensah, MA (Sunderland)  
Human rights and the arts

Alice M Nah, PhD (Singapore)  
Human rights defenders; asylum and migration in Asia

**Teaching Fellow**

John Gray, LLB

ENGLISH LANGUAGE REQUIREMENT
IELTS 7.0 with no less than 7.0 in Speaking and Writing, and no less than 5.5 in Listening and Reading, or equivalent (see page 33)

Programme offered

MPhil/PhD in Language and Communication

Language and Communication is an interdisciplinary programme offering supervision for doctoral research into language use and communication. Our work encompasses everyday interactions as well as medical, institutional, workplace, educational (including language learning), social welfare and legal settings.

Communication is at the very heart of all aspects of social life. Almost everything we do, the ways in which we relate to one another, all the information we have about one another and the world more generally, and our social, political and economic conduct rely in one way or another on communication and the language through which we communicate.

Staff collaborating in Language and Communication are members of the Departments of Education, Language and Linguistic Science, Psychology and Sociology. They have specialised expertise in basic and applied research into the language we use to communicate with one another (interpersonal communication), and the ways in which language is used in society more broadly. The programme offers you specialised, flexible and individualised support across relevant disciplines for research into language, interaction and communication in a wide variety of contexts. We provide training in a range of approaches and methodologies, including conversation analysis, pragmatic analysis, relationships between verbal and non-verbal conduct, phonetic and linguistic analysis – tailored to suit your particular research area and needs.

We welcome applications to do doctoral research that will contribute to the rapidly developing and expanding study of language use in all forms of social, institutional, educational and political life.

Language and Communication is affiliated to the Centre for Advanced Studies in Language and Communication (www.york.ac.uk/res/casl), an interdisciplinary research centre for the investigation of both basic and applied aspects of language use, interaction and communication. The Centre draws on the expertise of its members in the study of language use, including the study of phonetic, syntactic and pragmatic features of language. We bring together a range of methodological and theoretical approaches from our various disciplines. Our approach is always to investigate the dynamics of language use in interaction in natural social settings.

Your future

On completion of their doctorate, our students have gained employment in a range of academic positions, including full-time lecturing positions (internationally), and in university research (eg research into medical, legal and welfare interactions). The interdisciplinary programme in Language and Communication offers a unique opportunity for research into social interactions and the use of language in interaction – led by scholars with international reputations in this area. Students join an outstandingly active and supportive research environment. York is renowned internationally as a centre of excellence particularly in the field of conversation analysis.
Language and Communication overview

Language and Communication is an interdisciplinary programme involving four departments: Education, Language and Linguistic Science, Psychology and Sociology. It focuses on investigating language as it is used in the real world and the linguistic and social processes which underpin it. We conduct highly data-driven research into the communicative structures – linguistic, sequential, gestural – used in everyday life, in workplace settings, in educational settings, and in online interaction.

Academic staff on the programme have established international reputations for innovative research and cross-disciplinary working. We employ multiple methodologies underpinned by a range of approaches to the study of language, including cognitive, ethnographic, interactionist, or dynamic/emergent approaches to language study. Some of us use primarily qualitative methods (notably conversation analysis), while others specialise in experimental and quantitative approaches. We collaborate with individuals and groups elsewhere nationally and internationally, where our expertise can assist in realising the practical aims of projects.

The Department of Language and Linguistic Science, which administers Language and Communication, is one of the UK’s leading centres for research, scholarship and teaching in the discipline. We have high quality facilities for the analysis of data in a recently established data lab. When you join the programme, you will be joining a vibrant, welcoming and diverse postgraduate community whose members come from all around the world. We are international in outlook and welcome multilingual and multicultural research projects. Students on the programme have conducted research on a wide range of European, Asian and African languages and social settings.

Partner departments all have a full training programme for PhD students and once registered on the programme you will have access to such training. These include subject-specific courses, courses on research skills, and generic courses aimed at increasing students’ employability, personal effectiveness, language skills, etc. Through the Humanities Research Centre there is considerable potential for you to make valuable connections across disciplines.

You are normally assigned two supervisors from two different departments. This system of joint supervision reflects the interdisciplinary nature of the programme and provides input from different but complementary disciplinary perspectives and methodologies. The staff list below indicates core staff; depending on your research interests, we may include other staff members with relevant expertise. You would work closely with your supervisors, meeting regularly to discuss the design of your project, the methodology and practicalities of your research, data analysis and writing up.

When making an application, indicate which disciplines your research topic is relevant to and a possible supervisor for your research. The staff list and information on individuals’ web pages will help you to identify these disciplines and individuals. The course director will be happy to advise you.

The PhD in Language and Communication is available to full- and part-time research students, and also to visiting research students who would like to come here for short periods (usually between one term and a year) for specialist training. We welcome applications for an MPhil or more usually a PhD, and you may also study part-time.

Your background

The programme is suitable for graduates with at least a 2:1 honours degree (or Masters) in any discipline related to language and communication, including Linguistics and/or Languages (including English), Education, Communication, Psychology and Sociology. Some training in or acquaintance with a relevant methodology (e.g., pragmatics, conversation analysis) is generally required.

MPhil/PhD research degrees

Our basic and applied research expertise focuses especially on ordinary social interactions (conversation). Areas of research in which we can supervise research include (but are not limited to):

- conversation analysis, especially its relation to linguistics (including phonetics) and gesture; its application to different settings and problems; communicative strategies in interaction, and pragmatics
- language in particular settings: new media, the classroom, clinical encounters, legal, educational and workplace settings
- developing new methodologies, especially multi-modal, and methodologies that combine insights from qualitative and quantitative research paradigms
- cross-linguistic differences in language and communication; bilingual communication; communication in English as a second language.

Please note that we do not have expertise in most areas of mass communication and language/communication for business purposes, as these are conventionally understood and taught, although we can support research in some aspects of these fields where any kind of interaction is involved, for example interviewing in the mass media, interactions in the financial sector. Our website provides more information about staff research interests.

Here are some recent research topics:

- Second language acquisition in the classroom
- Negation in Danish conversation
- Calls to the emergency services in a Russian city
- Questioning in police interviews (in Montenegro)
- AIDS counselling in Thailand
- Answering indirectly in broadcast news interviews
- Service encounters between native and non-native speakers
- Storytelling in multi-party Italian conversation.

The PhD on AIDS counselling in Thailand was recently given the award for the best...

“I was particularly drawn to the Language and Communication programme because it is interdisciplinary and flexible – so you can specialise in specific contexts and languages. Supervision is excellent and accessible, as is the multidisciplinary training we get through organisations like the White Rose Doctoral Training Centre, which has been fundamental in my development as a conversation analyst.”

VERONICA, PhD IN LANGUAGE AND COMMUNICATION
doctoral dissertation across all the social sciences in Thailand. Other projects are ongoing, particularly in the field of medical interaction, but also in other ‘applied’ fields. Many of the above and other projects, however, are in ‘basic’ research fields such as the nature and practices of questioning and indirectness in talk. A common element through all these projects, and in the areas in which we offer supervision, is that they involve language use in interaction.

The programme comprises supervised study to determine the design of the research project (including literature review); to discuss the implementation of the research strategy; to provide training in relevant perspectives and methodologies; to advise about the practicalities of any necessary fieldwork/data collection; to assist in data analysis; and to provide guidance and advice about writing up the dissertation. Courses, for instance in theoretical, practical or substantive, and methodological areas, are available across the participating disciplines. These are selected by you in consultation with your supervisors, according to your particular interests, needs and research topic: that is, there are no formal course requirements or examined components for a research degree in Language and Communication.

Available funding

For information about funding, please see the pages on the University of York’s website (www.york.ac.uk/study/fees-funding), giving details about financial assistance that the University offers. There are no other bursaries or studentships attached particularly to Language and Communication.

---

### Staff list

#### Course Director

**Richard Ogden**, DPhil (York)  
Language and Linguistic Science: Phonetics; phonology; conversation analysis; cross-linguistic research

#### Professors

**Paul Foulkes**, PhD (Cambridge)  
Language and Linguistic Science: Phonetics; phonology; child language acquisition; sociolinguistics; forensic phonetics

**Celia Kitzinger**, PhD (Reading)  
Sociology: Gender and sexuality; conversation analysis; helplines; feminist and LGBT

**Robin Wooffitt**, DPhil (York)  
Sociology: Language and consciousness; identity and authority; CA and discursive psychology

#### Reader

**Peter Bull**, PhD (Exeter)  
Psychology: Microanalysis of interpersonal communication, speech, non-verbal behaviour; political psychology

#### Senior Lecturers

**Emma Marsden**, PhD (Southampton)  
Education: L2 acquisition; foreign and second language education; experiments in educational research

**Beatrice Szczepek Reed**, PhD (Potsdam)  
Education: Prosody; phonology; conversation analysis; cross-cultural interaction; institutional interaction

#### Lecturers

**Kelly Bennneworth-Gray**, PhD (Loughborough)  
Sociology: Discursive psychology; discourse analysis and conversation analysis; language and social interaction in forensic settings

**Andrew MacFarlane**, PhD (Christchurch)  
Language and Linguistic Science: Social psychology; priming; connections between speech and behaviour; experimental sociolinguistics

**Darren Reed**, PhD (Loughborough)  
Sociology: Gesture; interaction; embodiment; online communication and performance; science and technology studies; conversation analysis; social media; performance studies

**Merran Toerien**, PhD (York)  
Sociology: Conversation analysis; language in institutional settings; health professional–patient interaction; gender and interaction

**Danijela Trenkic**, PhD (Cambridge)  
Education: Second language use; individual differences; L2 grammar and vocabulary learning; listening comprehension

**Traci Curl Walker**, PhD (Colorado)  
Language and Linguistic Science: Phonetics; conversation analysis; language use in communicative contexts; interaction of sequence and linguistic structure; pragmatic theory
The Department of Language and Linguistic Science is one of the leading centres in the UK for teaching and research in theoretical and empirical linguistics. You will join an academic community committed to high quality teaching with a thriving research culture.

The central aim of our Department is to undertake research and teaching at the forefront of modern linguistics and to advance knowledge of the formal properties of linguistic systems and their use and evolution in speech communities. Recent staff appointments and brand-new purpose-built accommodation with five research and teaching laboratories have kept our Department at the forefront of current work in language and linguistics. York was placed second in the UK for ‘world-leading’ research in linguistics in the 2014 Research Excellence Framework assessment.

We are committed to high quality teaching in both linguistics and languages. Our Graduate School is part of a thriving research community whose principal research areas involve:

- Syntax and Semantics, particularly minimalism, principles and parameters and monostratal frameworks
- Language Variation and Change, particularly empirical methods, the language/identity nexus
- Psycholinguistics, particularly first and second language acquisition, child bilingualism and phonological development.

Research in all these areas focuses on a wide range of languages. The Department has also played a key role in the development of several major corpora and archives.

We have active collaborative links with colleagues all over the UK and in Canada, France, Finland, Germany, Holland, Japan, Korea, Spain, the USA and elsewhere.

Language equips you with analytical skills which translate readily into any work context. Many of our graduates remain in academia but others enter fields such as advertising, teaching, IT and broadcasting, as well as forensic science, the police and security services. Our MSc programme, through its links with industry, gives you opportunities to work with genuine case materials.
Programmes overview
We offer six programmes, each of one year’s duration, which lead to the award of the MA degree. We also offer one MSc programme, also of one year’s duration.

Your background
You will be expected to hold (or to gain) a First or 2:1 honours degree in a relevant subject.

MA in Linguistics
The MA in Linguistics aims to give you a general foundation in the central areas of modern linguistics, while at the same time allowing you to develop your own particular areas of interest.

The first term comprises four modules in the core areas of phonetics and phonology, semantics, sociolinguistics and syntax. In the second term you will choose two modules. You may choose to concentrate on modules in one of our specialist areas (Phonetics and Phonology, Psycholinguistics, Sociolinguistics, Syntax and Semantics). Teaching continues into the third term with a core module, Key Ideas in Linguistics. The programme is completed with a dissertation.

MA in Comparative Syntax and Semantics
The MA in Comparative Syntax and Semantics is aimed at those with a solid theoretical background in syntax and semantics. It provides the opportunity to deepen your interest in areas such as parameters, comparative syntax and the syntax–semantics interface.

The first term comprises modules in syntactic and semantic typology. In the second term you will take two modules on syntax and semantics, involving comparative syntax at the interfaces. The programme is completed with a dissertation.

MA in Phonetics and Phonology
The MA in Phonetics and Phonology is aimed at those with a solid foundation in phonetics and phonology while giving you a practical training in techniques used in phonetic analysis. You will develop your interest in areas such as forensic phonetics, conversation analysis, sociophonetics and the phonetics–phonology interface.

Both first and second terms comprise modules in phonetics and phonology. In the second term you will choose two modules which may include, among others: Computational Phonetics; Sociophonetics; Phonetics of Talk-in-Interaction. The programme is completed with a dissertation.

MA in Psycholinguistics
The MA in Psycholinguistics will provide you with a general background in psycholinguistics while giving you a practical training in the techniques and methodologies associated with the field of study. You will have the opportunity to develop your interest in areas such as second language acquisition, phonological development or bilingualism.

All students will take modules in language acquisition, psycholinguistics, quantitative methods, Key Ideas and either syntax or phonology. In the second term you will take two modules. The options may include: The Acquisition of Syntax; Second Language Syntax; Second Language Phonology; Bilingualism; Language and Brain; Topics in Phonological Development. The programme is completed with a dissertation.

MA in Sociolinguistics
The MA in Sociolinguistics will enable you to perform original research in the field of sociolinguistics by giving you a practical training in techniques and methodologies used in sociolinguistic analysis. You will also have the opportunity to develop your interest in areas such as the interface between variation and phonological and syntactic theory.

The first term comprises four modules in the core areas of phonetics and phonology, semantics, sociolinguistics and syntax. In the second term you will take two modules on sociolinguistics which may include: Sociophonetics; Topics in Language Variation and Change. The programme is completed with a dissertation.

MSc in Forensic Speech Science
The MSc in Forensic Speech Science is delivered in conjunction with one of the world’s leading forensic speech laboratories, JP French Associates. The programme focuses on the key forensic tasks of speaker identification, questioned utterance analysis, speaker profiling and line-ups or ‘identification parades’.

The programme is not offered as a vocational qualification, although successful completion of the programme will increase your employability in a forensic setting.

Term 1 will provide you with both a general introduction to forensic speech science and a thorough grounding in the general principles and methodologies of language variation, phonetics and acoustics. The modules in Term 2 are largely practical in focus, enabling you to extend your experience in phonetic and acoustic analysis using a variety of recorded materials. In Term 3 you apply your knowledge and skills in a case-based module using authentic forensic materials. The programme is completed with a dissertation.

MA in Linguistics (by research)
The MA (by research) is aimed at those with a solid background in linguistics as a whole and a sound grasp of the areas in which you wish to specialise. Some prior experience in independent research would also be an advantage.

This MA involves training in general and sub-field–specific research methodologies, attendance at any taught modules deemed necessary, integration into one of the departmental research groups and a dissertation.

Your application must include a detailed research proposal. Feel free to ask us to put you in touch with a relevant member of staff to discuss this proposal before applying.

“This course appealed to me because it caters for students wanting to specialise in phonetics and phonology, and is excellent preparation for further study. I particularly enjoyed Computational Phonology, and the diversity in the weekly Department colloquium. The enthusiasm and dedication of staff to their research is very inspiring. The interdisciplinary community in the nearby Humanities Research Centre provides plenty of opportunities for collaboration and socialising.”

YINGLUN, MA IN PHONETICS AND PHONOLOGY

94 Language and Linguistic Science
PhD in Linguistics
If you are interested in applying to do doctoral research in an area of Language and Linguistics, you are encouraged to discuss your interests and proposal with relevant staff as early as possible. You would normally be expected to hold a Masters degree before embarking on PhD study.

MPhil/PhD in Language and Communication
The Department also participates in an interdisciplinary MPhil/doctoral programme in Language and Communication, together with the Departments of Psychology, Education and Sociology. For more information see page 90.

Available funding
The Department typically receives ESRC and AHRC studentships each year which provide funding for Masters and doctoral students. News on the studentships that will be available for 2016 will appear on the University’s website from autumn 2015.

The University offers a range of studentships and scholarships for full-time graduate students, some of which may be available to applicants for postgraduate Linguistics degrees. Up-to-date information is available on the University’s web pages at www.york.ac.uk/study/fees-funding/postgraduate. The Department also offers scholarships and studentships. Visit our web pages at www.york.ac.uk/language/prospective/postgraduate/funding.

Please note that funding application deadlines are very strict. Potential applicants for funding are advised to contact the Department by early January at the latest.

Staff list

Professor and Head of Department
Peter Sells, PhD (Massachusetts) Syntactic, semantic and morphological theory; East Asian linguistics

Professors
Dunstan Brown, PhD (Surrey) Morphology; morphology–syntax interaction; typology
Paul Foulkes, PhD (Cambridge) Phonetics; child language acquisition; sociolinguistics; forensic phonetics
Peter French, PhD (Bristol) Forensic speech science; language and audio analysis
Paul Kerswill, PhD (Cambridge) Sociolinguistics; language variation and change; dialect contact
Giuseppe Longobardi, PhD (Pisa) Syntax; semantics; historical–comparative linguistics
Susan Pintzuk, PhD (Pennsylvania) Syntactic variation and change in the history of Germanic languages
Marilyn Vihman, PhD (Berkeley) Phonetics; phonology; child language development; child bilingualism

Reader
Richard Ogden, DPhil (York) Phonetics; phonology; conversation analysis; Firthian prosodic analysis

Senior Lecturers
Sam Hellmuth, PhD (SOAS) Phonology; prosody of Arabic varieties
Tamar Keren–Portnoy, PhD (Jerusalem) Phonological development; early syntax
Carmen Llamas, PhD (Leeds) Language variation and change; sociolinguistic methodologies
Bernadette Plunkett, PhD (Massachusetts) Syntactic theory; syntax of French, Arabic and English; syntactic language acquisition
Ann Taylor, PhD (Pennsylvania) History of English; language variation and change; corpus linguistics
George Tsoulas, PhD (Paris) Syntactic theory; semantic theory; the syntax–semantics interface
Dominic Watt, PhD (Newcastle) Phonetics; language variation and change; forensic phonetics

Lecturers
Caitlin Light, PhD (Pennsylvania) Syntax, variation and change in English and Germanic languages
Andrew MacFarlane, PhD (Christchurch) Social psychology; priming; connections between speech and behaviour; experimental sociolinguistics
Heather Marsden, PhD (Durham) Second language acquisition; syntax and semantics; research methodology
Márton Sóskuthy, PhD (Edinburgh) Phonetics; phonology
Traci Curl Walker, PhD (Colorado) Conversation analysis; the phonetics of naturally occurring talk–in–interaction
Eytan Zweig, PhD (New York) Formal semantics; neurolinguistics

ENGLISH LANGUAGE REQUIREMENT
IELTS 7.0 with no less than 7.0 in Writing and no less than 6.5 in other components, for the PhD, LLM in International Corporate Governance and Commercial Law, and LLM in the Theory and Practice of Clinical Legal Education
IELTS 6.5 with no less than 6.0 in each component for LLM in International Human Rights Law and Practice and LLM in Legal and Political Theory

Programmes offered

LLM in International Corporate Governance and Commercial Law
LLM in the Theory and Practice of Clinical Legal Education
LLM in International Human Rights Law and Practice
LLM in Legal and Political Theory
MPhil/PhD

York Law School offers a growing range of postgraduate programmes, underpinned by a commitment to the highest standards of education and research. Our purpose–built accommodation on Heslington East provides exceptional facilities and a dynamic environment for learning and research.

York Law School was established in 2007 and combines an international outlook, academic rigour, interdisciplinary strength and the study of law in different contexts. We enjoy a close relationship with the legal profession, with practitioners from national and international firms involved in the design and delivery of key aspects of all our programmes. In postgraduate taught programmes there are close links with the York Management School and the Centre for Applied Human Rights. Areas of particular research strength include: international and comparative corporate and commercial law, trust law, public law and administrative law, international human rights law, law and social policy, international trade law, law and history, financial crime, environmental law, criminal law, obligations, housing law, international labour law, comparative labour law, EU law, the legal profession, legal theory and legal education.

Throughout all our programmes and research we are guided by our desire to offer a distinctive approach to legal education incorporating:

- balance – creating a blend of theoretical, practical, and skills–based approaches
- social and economic context
- integration with other disciplines
- world–class research – informing everything we do.

All programmes at York Law School are based on the principle that a 21st–century Law graduate requires more than a thorough knowledge of legal rules. A rounded lawyer understands law in its economic and theoretical contexts while developing skills and techniques which provide a solid foundation for the world of work.

In the 2014 Research Excellence Framework, the School was ranked fifth overall and equal fourth for the impact of its research.

Your future

Our alumni have gone on to legal training, as well as positions in government, professional bodies and charities. Our students benefit from the unique combination of rigorous academic study and traditional teaching methods with our innovative problem–based learning approach. This gives them the opportunity to apply their learning to realistic scenarios in a genuine collaboration with their fellow students and their tutors.
Programmes overview

The Law School offers four distinct taught postgraduate programmes, as well as the PhD. The LLM in International Corporate Governance and Commercial Law integrates the Law School’s pioneering problem–based learning with traditional seminars and a thesis on a subject of the student’s choice. There are also the LLM in International Human Rights Law and Practice, the LLM in Clinical Legal Education and the new LLM in Legal and Political Theory. The PhD in Law is a research degree of three years, supported by a training programme in legal research skills provided by the Department, and sessions on transferable skills provided by the Researcher Development Team.

LLM in International Corporate Governance and Commercial Law

The globalisation of commerce, law and the legal profession demands an understanding of comparative, transnational and international law and therefore adds a layer of complexity. The LLM in International Corporate Governance and Commercial Law is designed to address this complexity. It aims to develop a deeper understanding of how international corporate and commercial law operates in the real world. It will enable successful students to pursue a wide range of careers in business or return to professional practice with an enhanced understanding of various important areas of law and practice. It also provides a firm platform for further research and study by way of a PhD.

All teaching uses small groups of students. This programme should appeal to anyone with an interest in cross-border transactions and international business. Students studying the LLM in International Corporate Governance and Commercial Law come from a number of different countries. Whatever a student’s background he or she will discover areas of law that are ‘foreign’ but may well be from the national jurisdiction of a fellow student. The course therefore commences with a compulsory module (Introduction to Comparative Law) where students are introduced to different legal perspectives from around the world and this provides a general introduction to the programme.

The rest of the LLM programme offers a flexible mix of compulsory and optional modules designed to ensure that students are able to study a wide range of different legal subjects and to gain a proper international perspective in the field of corporate governance and commercial law.

LLM in the Theory and Practice of Clinical Legal Education

Experiential learning has been a feature of the York Law School’s portfolio since its inception. This approach to study is now increasingly prevalent in law schools worldwide. The LLM in ‘Clinic’ at York is the first of its kind and takes the study of clinical legal education (CLE) to a new and deeper level.

The programme, which began in October 2014, is attracting interest from those already involved or aspiring to work in legal clinics in law schools and the not-for-profit sector. The programme has been designed to give students the theoretical foundation for CLE but in the practical context of running clinical programmes. This mix of the academic and applied enables students to put their understanding into an actual service delivery setting, thus meeting educational requirements of students and professional needs of clients.

The core modules deal with the ‘how’ and ‘why’ of clinic and the electives look at a variety of clinical models in the UK and further afield as well as related subjects such as dispute resolution and human rights. Students are encouraged to engage in comparative work with opportunities to work in other institutions and countries. The programme culminates in a dissertation on a topic related to CLE.

Time spent in the YLS Clinic can count towards the work–based experience currently required for qualification by the professional regulatory bodies.

On successful completion of this LLM, subject to professional practice rules, students should be equipped to set up clinics that accord with ‘best practice’.

LLM in Legal and Political Theory

It is sometimes said that political theory concerns the questions of ‘who gets what and who says?’. In modern pluralistic societies an additional question arises: how can we live together peacefully in circumstances in which we disagree about how best to live? These issues are both political and legal. States, and increasingly international institutions, regulate citizens’ lives through law. The LLM in Legal and Political Theory is a unique collaboration between the Departments of Politics and Philosophy and the York Law School, offering the opportunity to study the core issues and approaches of legal and political theory and to consider the relations between them.

The core modules will introduce you to the fundamental questions of legal and political theory, while a wide range of option modules will allow you to pursue your particular intellectual interests. Your dissertation, on a topic of your choice and written under the supervision of a member of staff, completes the programme.

LLM in International Human Rights Law and Practice

The Centre for Applied Human Rights offers this LLM and other degrees. See the Centre entry on page 87 for information.

Your background

Ideally you will possess a good first degree (typically a 2:1 or equivalent). Preferably this will be in Law or a law–related subject. Applications are welcomed from both home and overseas students.

“What drew me to the LLM in International Corporate and Commercial Law was its applicability for employment and the broad range of modules on offer. One of the highlights was taking part in a live negotiation with a Law School in Boston. Each student went through the whole process of a complex international commercial deal. Within the School, the interaction between students and staff is friendly and collaborative. It has given me the tools and confidence to launch my career.”

ELLIOTT, LLM IN INTERNATIONAL CORPORATE AND COMMERCIAL LAW (INTERNATIONAL CORPORATE GOVERNANCE AND COMMERCIAL LAW, FROM 2016)
MPhil/PhD

Please see our staff research interests on our web pages to identify a potential PhD supervisor.

For interdisciplinary research, we have good links with other departments and co-supervision arrangements are possible.

Postgraduate researchers meet regularly with their supervisors and progress is assessed through the Thesis Advisory Panel. Researchers are further supported by a training programme with regular workshops on a range of methodological approaches and on managing elements of the research project. In addition, a programme of transferable skills training is available through the Researcher Development Team. Advanced training is offered in the context of the White Rose Doctoral Training Centre with the Universities of Leeds and Sheffield. Research students are encouraged to participate in the Law School’s seminar series and brown bag work-in-progress sessions.

In your application, please make your proposed area of research as specific as possible, indicate your own academic background, and state which member(s) of staff you would like to work with as part of your supervisory team.

Your background

You will possess a good first degree (typically a 2:1 or equivalent) in Law or a cognate discipline, and preferably a Masters degree. Applications are welcomed from both home and overseas students.

Available funding

For information on available funding please see our website www.york.ac.uk/study/postgraduate/fees-funding.

98 Law
The Centre for Lifelong Learning has carved out a niche in offering high quality, distance learning provision over the past decade, focusing on first-rate student engagement and flexible models of delivery. As a learning provider, we have offered a variety of educational opportunities for more than 25 years, and have received numerous Vice-Chancellor Awards for the standard of our teaching and student support.

The Centre for Lifelong Learning is a thriving unit within the University, offering innovative learning opportunities both locally and globally, with a specific remit of supporting non-traditional students as they return to learn. The Centre offers around 200 evening and day classes during the academic year, receiving around 2,200 applications annually. We are based on the Heslington campus and aim to make the University a place for everyone, priding ourselves on working in partnership with University departments, external funding bodies and local agencies throughout our work.

Since 2007, we have developed an extensive range of distance learning programmes to reach learners nationally and around the world, with a particular focus on creative writing. In that time, we have taught hundreds of students from the UK and around the globe, and have used our expertise to devise new, part-time postgraduate programmes that offer you study flexibility without compromising academic rigour. Our approach is to create vibrant and dynamic learning experiences despite students’ distance from one another, fostering a sense of community through keenly facilitated learning.

Our technology-enhanced delivery uses the University’s virtual learning environment, Yorkshare, to ensure that you receive a comprehensive learning experience regardless of when or where you engage, and without the need for extensive IT knowledge. All of our online learning is supported by experienced staff and there is never a need for you to be on the course site at a set time for core activities, making this the ideal way to extend your learning.
Programmes overview
Each postgraduate diploma is an online programme of study which can be taken on a part-time basis over two years, comprising a variety of learning materials and activities. Modular in design, each programme consists of six modules, assessed by a range of methods appropriate to the topics covered and facilitated by teaching staff with expertise in the field. Please check the website at www.york.ac.uk/lifelonglearning for the latest details about all Lifelong Learning programmes of study.

Your background
We would normally expect you to hold a first degree (with second-class honours or above) in a subject related to the Postgraduate Diploma for which you are applying. However, applications will be assessed on an individual basis, and in line with the ethos of lifelong learning, we will consider applicants who do not hold traditional qualifications, providing they can demonstrate their ability to study at this level.

Postgraduate Diploma in Astronomy (by distance learning)
Led by Dr Alex Brown, this programme will offer home astronomers, who may have graduated in subjects other than Physics, the opportunity to gain a formal postgraduate qualification in Astronomy and Astrophysics, and is designed to give students a robust and up-to-date background in these areas. Over the course of two years, we will explore the solar system, stellar physics and infrared, radio and high energy astronomy, as well as discussing the foundations of cosmology.

By its very nature, astronomy is a mathematical subject; students will therefore need a background in this area, although fully-supported Mathematics masterclasses will be a permanent feature on the programme for those who need to refresh their skills in this area.

Year 1
- Introduction to Astronomy
- Stellar Physics
- The Solar System.

Year 2
- Infrared and Radio Astronomy
- High Energy Astronomy
- The Foundations of Cosmology.

Postgraduate Diploma in Creative Writing (by distance learning)
Led by Elizabeth Linklater, the Postgraduate Diploma in Creative Writing is a two-year part-time programme, aimed at writers wishing to develop their creative and critical skills at an advanced level. The programme adopts an all-encompassing approach to the discipline of creative writing, taking in a variety of genres and exploring the major forms of prose, poetry and scripts. The award is delivered wholly online, in a fully supported learning environment, and builds on many years of experience in the international distance learning arena.

The programme comprises six 20-credit modules which will develop students' writing skills and their critical faculties in a range of genres. These modules are:

Year 1
- Creative Practice: Creativity, Theory and the Craft of Writing

“Writers of fiction, poetry and scripts need to be reflective, thoughtful, critical and analytical alongside being creative, innovative and experimental. This programme addresses both aspects in its endeavour to produce distinctive new voices. In the words of one of our students: 'The course presents intellectual and creative challenges, while the style of teaching and the support of other students creates a buoyant and positive learning environment.'

LIZZI LINKLATER, LEAD TEACHING FELLOW, PGDip IN CREATIVE WRITING

Year 2
- Poetic Power: Theory and Practice in Contemporary Poetry
- Sustained Fiction: The Novel as Narrative
- Dramaturgy, Sound and Screen.

Postgraduate Diploma in The Geology of Yorkshire and Northern England (by distance learning)
Northern England has an extraordinary diversity of landscapes and geological features, and as the largest county, Yorkshire preserves a large proportion of them. From the rugged North York Moors and the limestone pavements of the Yorkshire Dales to the coalfields of South Yorkshire and the shifting coastlines of Holderness, it is in many respects a microcosm of the region.

In The Geology of Yorkshire and Northern England, students will obtain a regional geological understanding with which to interpret larger-scale Earth processes and structures. The programme will provide students with training in advanced palaeoenvironmental analysis and science communication skills. Students will also assess Yorkshire and Northern England’s importance to current controversies in Earth sciences, from fracking to climate change, and will acquire an understanding of the region’s vital role in the history of geology.

Please note that each year at the start of the first module, students will be required to attend a five-day residential course; attendance is compulsory as the residential programme contains key content and contact hours.

Year 1
- Origins – the Development of Geology in Northern England
- Dales and Vales – the Palaeozoic of Yorkshire and Northern England

Year 2
- Advanced Palaeoenvironmental Analysis
- Fire and Ice – the Cenozoic of Yorkshire and Northern England
Postgraduate Diploma in Railway Studies
(by distance learning)

Led by Dr David Turner, the Postgraduate Diploma in Railway Studies is a two-year part-time programme, aimed at anyone with an interest in railway history wishing to study its wider social, political and economic impacts. The Postgraduate Diploma in Railway Studies is designed to give students an alternative perspective on railway history and provide a better understanding of how academics have investigated the social, cultural, political, business, economic and technological aspects of British railway history between 1825 and 2002. Those successfully completing the Diploma will come away thinking about railway history differently, and the programme overall will act as a bridge from an ‘amateur’ interest in railways to an understanding of the ongoing academic discourse.

The programme comprises six 20-credit modules which will develop students’ knowledge and critical faculties in a range of subject areas:

Year 1
- The Coming of the Railways to Britain, 1825–1900
- The Declining Profitability of the Railway Industry, 1870–1914
- British Railway Workers, 1825–1926.

Year 2
- The Role of the Railways: Railways and Government, 1888–1939
- The Railways and Society: The Railways after the Second World War

Residential weekends
All programmes include at least one residential weekend at York each year. Each event is an opportunity to meet teaching staff, network with fellow students, engage in study activities and hear experts talk about specific topic areas. These weekends are free of charge, though students will be expected to meet the cost of their travel, accommodation and sustenance. For anyone unable to attend, there will also be the option to engage with key sessions via real-time video conferencing or to listen to recordings at a later date.

The York Management School offers a range of postgraduate programmes that will suit graduates who want to specialise in a particular aspect of management or those who want to add general management to their CV to improve their employment prospects.

At the York Management School we have a diverse community of students, taught by renowned academics with research interests in the international business community and major public institutions. The School has successfully built a research strategy in areas of identified strength and core programmes that are attractive to key employers in the field. The School has approximately 1,000 students (350 on Masters programmes) and currently 50 teaching staff, housed in new purpose-built facilities at Heslington East.

Research is central to our activities, providing discovery and insight, and constantly informing and developing our teaching activities. The School is organised around six subject groups: Accounting and Finance; Human Resource Management; International Business, Strategy and Management; Marketing and Global Business; Operations Management; and Organisational Behaviour, Theory and Technology.

We are committed to delivering internationally relevant, research-informed programmes in a supportive atmosphere.

In the 2014 Research Excellence Framework assessment, a significant majority of the Department’s research activity was designated ‘world-leading’ or ‘internationally excellent’.

Your future

York Management students have been successful in developing careers in a range of organisations in many parts of the world. Common destinations on leaving are:

- accounting and finance – including the ‘big four’ (EY, PWC, Deloitte and KPMG in the UK, Hong Kong and Shanghai)
- investment banking – in London, Europe and Hong Kong
- public sector – local government, police, education and health
- small to medium-sized enterprises – a range of roles in operational and HR management.

A small number of students each year are keen to continue their studies, for example moving on to the York Management School doctoral programme.
Programmes overview
At York, you can expect to study with students from all over the world. During the past few years large numbers of UK, European and Chinese students have applied for the taught Masters programmes, together with others from North, Central and South America, India, Indonesia, Malaysia, Pakistan, Taiwan and Thailand.

Multicultural and multinational group work is a requirement of the programme. Case studies look at organisations from around the world and there is an expectation that students will develop cross-cultural management skills as they study.

In this environment, students will enjoy the experience of working on projects with international colleagues, and international students will be able to develop their academic skills in a Management School that understands the issues that they face on arrival in the UK.

The Masters programmes comprise three distinct sections. In Term 1 all students undertake a series of core modules, with a period of assessment at the beginning of January. In Term 2, students take additional core modules, and select others from a range of options, with a second period of assessment in April. Finally, all students are required to produce a dissertation for submission in mid-September.

The Masters programmes are designed to enable successful students to pursue a wide range of management career options or to take their studies further by researching for an MPhil or PhD degree in the School.

The School has a strong team of academic staff who are conducting high quality research in the areas covered by the degree and have expertise in teaching internationally diverse student groups.

To engage with the programmes successfully you will need either a 2:1 or equivalent degree or a 2:2 degree with relevant work experience.

MA in Management
This is a general management Masters programme, which covers the main management subjects of financial management, people management, management of operations, managing information and managing strategy. Students can specialise in areas of particular interest through their module choices in Term 2 and while completing their dissertation.

Your background
If you have not studied Management before, and wish to enhance your CV with this qualification, or if you would like to improve your job opportunities in management, this is the programme for you. Alternatively, if you have been in employment for several years after graduation you may wish to use the qualification to change the direction of your career.

MA in Human Resource Management
Accredited by the Chartered Institute of Personnel and Development (CIPD)

This is a specialist programme that teaches human resource management theory and practice. The programme explores the current research agenda, best practice and innovative thinking in human resource management. It is suited to those wishing to learn the knowledge and skills required to become an HR specialist in a range of organisations. Successful completion of this degree will lead to exemption from the knowledge requirement for Chartered Member status of CIPD. This Masters programme, together with CIPD Chartered Membership, will enhance career prospects in this rapidly growing sector.

Your background
Ideally, you should have a 2:1 degree or equivalent in Business, Management or Social Sciences, or alternatively have a 2:2 degree and been working for two years or more in a related field of work.

MSc in Accounting and Financial Management

This specialism in focus is intended to build on your existing knowledge of accounting and finance. It concentrates on the role of accounting and finance in organisational management and will provide you with a thorough grounding in accounting, finance, financial management, financial reporting, financial markets and investment and risk.

Your background
If you have a 2:1 or equivalent undergraduate degree in Finance and/or Accountancy, studied a significant number of finance and accounting modules within another degree programme, have finance/accountancy professional qualifications and would like to study the subject at greater depth at postgraduate level, this programme will help build your qualifications towards a career in financial management and/or accountancy.

“MSc in Global Marketing is a well-rounded programme focusing on the different aspects of marketing in a global context and attracting students from around the world. The lecturers are very knowledgeable and passionate about their subject and also very approachable and friendly. Throughout the year we’ve also had excellent guest speakers from both industry and academia, enabling me to make useful contacts for my future career.”

CHARLOTTE, MSc IN GLOBAL MARKETING
MSc in International Business and Strategic Management

This specialist programme gives students an opportunity to study a wide range of international business topics. The programme is designed to provide students with the knowledge and skills needed for work in the increasingly globalised world of business.

The programme will cover up-to-date topics in strategic management and internationalisation, international political economy, and organisation of a firm with particular reference to recent cases of opportunities, challenges and best practices in international business.

Your background

Ideally you should have a 2:1 or equivalent in Business, Management or any Social Science-related area, or a 2:2 degree supplemented by relevant work experience. Applicants will have good numerical skills and may have studied some Economics at undergraduate level.

MSc in Global Marketing

This Masters degree specialises in marketing in the global business context. It gives students the opportunity to study a range of subjects on topical and exciting marketing areas, including global marketing, brand management, social and ethical marketing, and digital marketing. The programme provides students with the knowledge and skills to pursue marketing careers in the global private, public and not-for-profit sectors.

Research-informed teaching, creative assessment and contributions from speakers from industry are special features of this programme. Furthermore, the programme puts an emphasis on innovation in global marketing in general and the areas of sustainability, marketing ethics, and the use of social media and internet communication tools in particular.

The staff who teach the programme are members of the Centre for the Evolution of Global Business and Institutions, based at the York Management School, a world-leading centre for research on global branding. See www.york.ac.uk/management/centres/cegbi.

This programme is designed for Masters students aiming to specialise in marketing as a profession and will enhance career prospects in this rapidly growing management sector.

Your background

Ideally you should have a 2:1 undergraduate degree or equivalent. Preference may be given to students with some prior study of marketing and/or business management. However, students with a 2:2 degree can compensate for their degree classification if they have had two or more years’ work experience in a related field after graduating.

MSc in Corporate Social Responsibility with Environmental Management

CSR and environmental management are becoming key issues for businesses and organisations in the UK and overseas, as they seek to resolve long-standing operational and competitive challenges using socially and environmentally friendly technologies and processes. The context of the programme is international, reflecting the increasing trend towards the globalisation of business organisation and the transnational nature of environmental problems faced by the corporate sector, regulators and policymakers. The programme is suitable for those aiming for careers in management in the for-profit and not-for-profit sectors.

The programme is taught by the Environment Department and the York Management School; see page 71.

MSc in Social Media and Management

Social media technologies are increasingly essential to organisations in the commercial, public and voluntary sectors. This programme, jointly taught by the Department of Sociology and the Management School, is designed to expose participants to the latest research and practice in the management of social media; see page 154.

By taking this degree you will gain a comprehensive appreciation of sociological and management theories on the relationships between new media and sociocultural and organisational change and the adaptation of social media for competitive advantage.

MRes in Management Studies

The MRes programme offers taught modules in research methods, aspects of the research process and a dissertation, giving a practical and a theoretical approach to undertaking research in Management Studies. The programme provides students with foundation training in research skills sufficient to enter a doctoral programme. The programme is also suitable for candidates who want to obtain a research-based degree but do not wish to commit themselves to a longer period of study at this stage.

Available funding

The University and the York Management School offer a range of Masters scholarships which students can apply for once they hold an offer of a place from the University.

The School has received ESRC studentships each year which provide funding for doctoral students on our postgraduate pathways, covering fees and a living allowance. As part of a new ESRC scheme, the University has an opportunity to broaden those areas which can secure such support, and has developed proposals to do so. More news on studentships available for October 2016 will appear on the Management School and University websites from early 2016.

For more information on Masters funding, please see our website www.york.ac.uk/management/masters-funding.

For more information on research funding, please see www.york.ac.uk/management/research-funding.

ENGLISH LANGUAGE REQUIREMENT
IELTS 6.5 with no less than 5.5 in each component, or equivalent (see page 33), for the MSc programmes
IELTS 6.0 with no less than 5.5 in each component, or equivalent, for research programmes

Programmes offered

MSc in Financial Engineering
MSc in Mathematical Finance
PGCert/PGDip/MSc in Mathematical Finance (by online distance learning)
MSc in Statistics and Computational Finance
MSc in Advanced Mathematical Biology
MSc in Mathematics (by research)
MPhil/PhD in Mathematics
MPhil/PhD in Mathematics (with Foundation Phase)

Your future

Many of our graduates go on to successful careers in academia, research, teaching and business, notably the financial sector including accountancy, banking, insurance and the stock market and also consultancy and health/medical and biological sciences.

The Department of Mathematics combines leading mathematical and interdisciplinary research with high quality postgraduate teaching, in which we place particular emphasis on a personal approach and a friendly atmosphere within our vibrant academic community.

Members of the Department are actively engaged in creating and expanding mathematics and statistics, often with regard to applications in other areas of science. For example, looking towards biology, members of the Department working in the York Centre for Complex Systems Analysis (YCCSA) have taken great strides forward in understanding the structure of viral capsids; others working in the domain of number theory have made progress in the area of Diophantine approximation that is proving useful for communications, and developed techniques using random matrices that go to the heart of deep problems concerning the distribution of prime numbers. Our algebraists and mathematical physicists have paved the way for new applications of algebra, while others focus on the foundations of quantum mechanics and quantum information. Our continuum mechanics group has grown with the appointment of an expert in the mathematical description of swimming algae whose work has the potential to influence the design of bioreactors. Our analysts are tackling problems that arise in economics, finance and physics and our expanding group of statisticians are tackling data of direct relevance to important health issues. In short, the Department of Mathematics is an exciting place to be.

Our five taught Masters programmes will equip you with specialist knowledge and mathematical modelling skills required in such diverse areas as finance, economics, consultancy, health and science. As a research student you will have the opportunity to make your own original contribution to the advancement of knowledge in your field of interest. You will have access to the virtual graduate school MAGIC, which video-links York with 18 other UK Mathematics departments.

In the 2014 Research Excellence Framework assessment, 80 per cent of the Department’s research activity was designated ‘world-leading’ or ‘internationally excellent’. We hold an Athena SWAN Bronze award for commitment to supporting women in mathematics and science.

The Department’s two Fellows of the Royal Society have made fundamental contributions to theoretical physics, including new analytic and algebraic structures which underpin the exact solution of certain models in quantum physics.
Programmes overview
The Department offers research supervision leading to the degrees of MSc (by research), MPhil and PhD in any of the research areas described on page 108. The Department also offers a range of taught Masters programmes as described below. These are indicative at the time of writing, but you should check our website for more detail and for any updated information before you apply.

MSc in Financial Engineering
This programme is delivered jointly by the Department of Mathematics and the Department of Economics and Related Studies. It is intended for candidates who want to combine a rigorous study of relevant topics in applied and computational mathematics with econometrics and quantitative finance.

Graduates will typically find quantitative finance jobs in the City and other financial institutions or work in fund management, insurance, the actuarial profession, taxation, or continue study to PhD level.

The teaching component of the programme comprises a variety of relevant courses, allowing you to tailor the degree to your own interests. Topics include Econometric Methods, Mathematical Methods of Finance, Stochastic Calculus and Black–Scholes Theory, and C++ Programming. The programme includes a dissertation, to be written during the summer.

MSc in Mathematical Finance
This intensive one-year taught postgraduate programme provides employment opportunities in investment banks, insurance companies, stock brokerage, unit trusts and pension funds, and corporate finance departments. Graduates can embark on careers in pricing derivative financial securities, fund management, risk management, research and development, or pursue further study to PhD level.

This programme will give you a broad understanding of the mathematics that underpins modern quantitative finance, and introduce you to the mathematical and computational techniques (such as stochastic analysis, partial differential equations and numerical methods) that are used by practitioners in industry. Taught modules are delivered in Terms 1 and 2, while the dissertation is completed under personal supervision during the summer.

Conversion Year
A Conversion Year is directed at candidates who have a good undergraduate (BSc) degree or equivalent but whose mathematical background is insufficient for direct entry to this MSc programme.

PG Certificate/Diploma/MSc in Mathematical Finance (by online distance learning)
This postgraduate taught Masters programme by online distance learning runs alongside the campus–based MSc in Mathematical Finance. It is divided into three stages: Certificate, Diploma and Dissertation. Successful participants who complete all three stages are awarded an MSc degree. It is also possible to register for the Certificate stage or both the Certificate and Diploma stages only, leading to the award of a Postgraduate Certificate or Postgraduate Diploma. Students who wish to follow selected individual modules are also welcome.

The online programme is designed to meet the needs of participants who wish to pursue a rigorous course of study in mathematical and quantitative finance without disrupting their professional or personal commitments.

A variety of distance learning tools and approaches are deployed: interactive presentations on CDs or DVDs in lieu of lectures; synchronous one-to-one tutorials via internet conferencing with audio, video and handwriting capabilities; web-based virtual learning environment (VLE); asynchronous discussion forums; printed and electronic lecture notes; exercises with worked solutions; support via email, internet telephony and internet conferencing.

Pre–sessional programme
A pre–sessional programme, Mathematics and Computational Finance, is directed at candidates who feel they need to revise and consolidate their mathematics background before embarking on this MSc programme.

MSc in Statistics and Computational Finance
This one-year MSc programme in Statistics and Computational Finance aims to train students to work as professional statisticians, not only at the interface between statistics and finance, but to provide skills applicable in sociology, health science, medical science, biology and other scientific areas where data analysis is needed. The emphasis of the programme is on data analysis. It will equip you with contemporary statistical ideas and methodologies as well as advanced knowledge which will make you very attractive to industry or academic and government institutions. Students with an interest in academic work may also decide to continue on a PhD programme in Statistics or a related field, for which the MSc in Statistics and Computational Finance provides a sound foundation.

MSc in Advanced Mathematical Biology
This interdisciplinary programme covers the breadth of mathematical applications in biology, ranging from marine systems and sustainable harvests to the mathematics of viruses and the swimming behaviour of microbes. It is aimed at candidates who are biologically inclined mathematicians or physicists, or biologists with a keen interest in modelling and analysis. This programme will prepare you either for a career in industry in the quantitative life sciences, or for further academic research in Mathematical Biology.

Taught modules include Bayesian Statistics; Biological Fluid Dynamics; Ecological Modelling; Mathematical Systems Biology; Mathematical Virology; Bioinformatics; Conservation Ecology

“I wanted to develop my research across the practical and theoretical fields, and the approach at York fitted this perfectly. I’ve worked under interdisciplinary supervision and the research seminars show how maths is a tool in many areas of science. The Department has supported my career development: I attended the Academy for PhD Training in Statistics, learned how to use York’s High Performance Computing facilities, and attended a conference for early career researchers working on Complexity Science.”

PAULA, PhD IN MATHEMATICS
and Biodiversity; Modelling with MATLAB; Issues in Modern Biology; PDEs; Stochastic Processes. There will also be a range of challenging elective modules and a group project.

An important part of the programme is a summer three–month work–based scientific or industrial research placement, towards the end of which you will write a dissertation.

Your background
For admission to any of the above taught Masters degrees you will normally need a 2:1 honours degree (equivalent to a second class or better) in Mathematics or a mathematics–based subject. For the MSc in Mathematical Finance and the MSc in Statistics and Computational Finance, such subjects may include business, finance or economics if there is a sufficiently strong mathematics background (equivalent to at least two years of university–level Mathematics courses).

For the MSc in Financial Engineering, your degree should be in finance or economics with sufficient background in mathematical sciences, or in a mathematics–based field with sufficient background in finance and economics. For the MSc in Advanced Mathematical Biology, your degree should be in a mathematical, physical or related subject area, or a biological science with significant quantitative bias.

MSc/MPhil/PhD research degrees
The following is a topic summary of the research you could pursue in our Department. You will be assigned a supervisor whom you will meet regularly to develop, plan and discuss the progress of your research project. You will also be supported by a Thesis Advisory Panel. We have a rich research environment to support your studies: many of our research groups belong to UK or EU research networks; we host weekly research seminars on many topics; graduate students run their own ‘graduate students only’ seminar and a range of reading groups; and you will have access to a wide range of graduate–level courses through the video–link network MAGIC.

The Foundation Phase year is directed at applicants who require more extensive Masters–level initial training before they embark on a PhD research project.

Algebra
Group Theory (geometric, algebraic and, finite groups), Representation Theory (algebraic groups, classical Lie groups and associated finite groups and finite–dimensional algebras, quantum groups and Hecke algebras, Yangians and quantum affine algebras), Semigroup Theory (non–regular semigroups, representations, endomorphism monoids, connections with ordered structures).

Analysis
Stochastic Analysis, including stochastic differential equations on infinite dimensional manifolds; stochastic PDEs, especially stochastic Navier–Stokes, Euler and Landau–Lifshitz–Gilbert equations in relation to turbulence and ferromagnetism; applications to mathematical physics, biology and mathematical finance; Functional Analysis.

Differential Geometry
Harmonic sections of Riemannian fibre bundles (particularly applications of harmonic sections to symplectic and contact geometry); integrable systems in geometry (particularly in the study of surface theory).

Fluid Dynamics
Biofluid dynamics of swimming microorganisms; oscillating and vibrating flows; bacterial swarming in thin films; stability theory; magnetohydrodynamics; averaging and asymptotic methods; chemically and biologically driven hydrodynamic instabilities.

Mathematical Biology
Stochastic processes and dynamical systems in mathematical ecology; virus structures and assembly processes, including applications of group theory; complexity in biological models; systems biology; mathematics of living suspensions; bioconvection; plankton dynamics and patchiness; biological control; mathematical physiology; flagellar dynamics; biofuel production; wound healing.

Mathematical Finance
Option pricing in markets with friction and incomplete markets; exotic and compound derivatives; energy markets; computational pricing techniques; entropy and financial value of information; robust arbitrage and model–independent pricing, probability theory and applications to mathematical finance; stochastic differential equations.

Number Theory
Analytic and metric number theory, such as Diophantine approximation, irrationality, transcendence, algebraic independence and random matrix theory. The research is deeply intertwined with other areas of mathematics, including ergodic theory, fractal geometry, dynamical systems and probability theory.

Quantum Gravity
Quantum field theory in curved space–times (quantum black holes; gravitons in the early universe; the Hawking effect; quantum inequalities on the renormalised stress–energy tensor; theory of reaction to radiating charged particles). Among the mathematical tools used are operators in Hilbert spaces; C*-algebras; microlocal analysis.

Quantum Field Theory and Integrable Models
Quantum field theory, spin chains, conformal field theory and string theory; quantum groups and Yangians; bulk and boundary integrability; relationship between gauge field theory and string theory; classical, semi–classical and non–perturbative field theory.

Quantum Information/ Quantum Foundations
Structure and dynamics of quantum systems with few degrees of freedom; quantum measurement and relativity; joint measurability of non–commuting observables; mutually unbiased bases; quantum state reconstruction; quantum–classical connection.

Statistics
Non–parametric statistics, time series, survival analysis, Bayesian inference, financial econometrics, functional data analysis, health economics, multi–level modelling, spatial data analysis, structural equation models, likelihood theory and methodology, change point problems, stochastic processes, coupling, perfect simulation, stochastic stability, MCMC, random walks on groups.

Your background
Applicants for admission to graduate research degrees in Mathematics should have or expect to obtain a 2:1 honours degree or higher in Mathematics, or a mathematics–based subject. For admission to study for a PhD in the area of Mathematical Finance, a first–class honours degree in Mathematics and an MSc in a mathematics–based subject passed above distinction level, including an MSc dissertation mark of 80 per cent or higher on the UK scale, are required.

Available funding
Each year we have a number of studentships available (from the EPSRC and other research councils) for the fees and stipend of UK resident PhD students (fees only for other EU residents). We will have a number of studentships available to suitable candidates from all countries. Other funding is also available via the University of York, including the Scholarship for Overseas Students (SOS) and the Overseas Research Scholarship (ORS).

For more information on funding, see our website www.york.ac.uk/maths/pg-funded.

IELTS 7.0 with no less than 5.5 in each component, or equivalent (see page 33)

Programmes offered

PGCert/PGDip/MSc in Health Professions Education (by distance learning)
MSc in Human Anatomy and Evolution
Masters in Public Health
MD in Medical Sciences
MSc by Thesis in Medical Sciences
MSc by Thesis in Human Sciences
MPhil/PhD in Medical Sciences
MPhil/PhD in Human Sciences

HYMS is one of the most innovative medical schools in the UK. As part of a joint venture between the Universities of Hull and York and the NHS, students at HYMS have access to an unparalleled learning and research environment.

We pride ourselves on providing a rich learning and research environment for our students to help them achieve their potential.

Our close links with the NHS makes HYMS an attractive place for healthcare professionals to undertake postgraduate study, either short courses and CPD or longer taught or research programmes.

We are a welcoming and inclusive medical school. HYMS has recently been awarded an Athena SWAN Bronze award for commitment to women in science. We foster a culture of education, scholarship and original research in medical and allied areas, including:

- Anatomical and Human Sciences
- Cardiovascular and Metabolic Research
- Health and Population Sciences
- Immunology and Infection
- Neuroscience and Neuroimaging
- Medical Education
- Cancer Studies.

HYMS has a range of taught and research programmes. Qualifications are awarded jointly by the University of Hull and the University of York. As a HYMS postgraduate student, you will be taught or supervised by subject experts, many of whom are internationally recognised for their work. According to the 2014 Research Excellence Framework, health services researchers at HYMS and the University of York are seventh in the country. The University of Hull and HYMS also excel in the area of Allied Health Professions and Studies.

The calibre of our programmes means that we attract students from all over the world. We are committed to providing all our postgraduate students with a high quality learning experience, through a variety of educational approaches, encouraging innovative and critical thinking and freedom of enquiry. We are confident that if you choose to study at HYMS, you will be equipped with the specialist and general skills, knowledge and experience to meet the challenges posed by your future career, whether in healthcare or another sector.

Your future

HYMS has strong links with the NHS. Many of our students are already employed and work in clinical settings. We work in partnership with the NHS to provide careers advice on progression for those registered on our programmes.
Programmes overview
HYMS is a stimulating place to study and welcomes students from a wide range of backgrounds, both clinical and non-clinical. For more information, please email postgraduate@hyms.ac.uk.

Taught degrees

PG Certificate*/PG Diploma/MSc in Health Professions Education

*Accredited by the Higher Education Academy (HEA)

This programme is designed for anyone who teaches in health-related areas. Using a blended learning approach, the programme enables students to enhance their practical skills in health professions education by critical reflection and developing their knowledge of underpinning educational principles.

The programme consists of three levels: Certificate, Diploma and Masters.

You must complete each level in order to apply to the next. If you have completed a Certificate at another institution within the last three years you may be able to enter the programme at Diploma level.

- PG Certificate* (one year part-time): you will develop practical capabilities in critical, reflective understanding of learning and teaching in clinical practice.
- PG Diploma (one year part-time): you will extend and deepen your understanding and application of educational theory, scholarship and leadership, and develop a solid foundation in health professions education and educational research.
- MSc (one year part-time): you will undertake an educational research project supervised by programme staff with research expertise, and produce a professional dissertation as the output of your research project.
- MSc (one year full-time): if you wish to study the content of the Certificate, Diploma and MSc in one year you may wish to apply for our full-time MSc.

The programme is designed to be studied as either a blended learning or a distance learning programme.

Your background

This programme is ideal for professionals teaching in a healthcare setting. To be enrolled you must have the opportunity to teach for at least 18 hours in an appropriate setting during the year. A Bachelors degree or equivalent is essential.

MSc in Human Anatomy and Evolution

This taught MSc provides you with a detailed understanding of human and primate evolution, focusing on anatomy and morphology and their interfaces with ecology and behaviour. Membership of the interdisciplinary PALAEO Centre at the University of York also makes this MSc an attractive option for those wishing to combine anatomical and archaeological approaches to the study of palaeoanthropology. You will acquire practical and theoretical knowledge about cutting-edge tools for morphometrics, imaging and functional simulation used to interpret the fossil record. You will also undertake a research project of your choice in consultation with your supervisor to investigate the current questions in human evolution.

Your background

The MSc in Human Anatomy and Evolution is open to strong graduates in anthropology, archaeology, biology, psychology, zoology and related fields. We normally require students to have a 2:1 honours degree or equivalent. The programme is now open to intercalating medical students.

Masters in Public Health

This one-year course in public health is designed for anyone who plans to work as a public health practitioner, to become a researcher, to work in government or non-governmental organisations, to go on to study medicine or pursue PhD studies.

The course is run in association with the Department of Health Sciences. For more information, please see the entry for that department on page 76.

Research degrees

Research students are based in one of the HYMS centres/units; these are listed on page 112 and further details are available at www.hyms.ac.uk. Depending on your research topic, you will be registered for a degree in either Medical Sciences or Human Sciences.

Your independent research project will be on a topic covered by a HYMS Research Centre.

MD in Medical Sciences

The MD in Medical Sciences is a research programme open only to qualified and experienced medical practitioners (those with an MBBS degree or equivalent). The full-time degree takes two years but you can also opt to study for an MD on a part-time basis.

You will conduct a substantial independent research project, which will lead to an original contribution to knowledge. Crucially, your MD project should address diagnosis or management in a clinical environment. If your proposed project does not cover this, you should consider doing a PhD instead.

All research at HYMS is conducted within strict ethical guidelines. Before starting your MD research you will need to get ethical approval from the University and NHS, through the appropriate ethics committees. You need to take this into account when planning your project and writing the proposal.

A very wide range of MD projects can be undertaken at HYMS. Current students are researching topics as diverse as HIV microbicides and outcomes of bariatric surgery.

“I chose this course because it applies new technologies to the study of human anatomy and evolution and puts emphasis on practical learning. With excellent support from the staff, I have gained a thorough theoretical background in anatomy and evolution and also understand when and how resources should be used to conduct proper research. Attending weekly meetings where PhD students and lecturers present their ongoing work has given me a more developed perspective on research. This is definitely the kind of course that helps students decide about their future careers.”

JULIA, MSc in Human Anatomy and Evolution
Medical School

Sciences brings together research and teaching in anatomical and human sciences. The Centre has strong working relationships with colleagues at the Universities of York and Hull. Thus, at Hull, we engage in cutting-edge research in musculoskeletal biomechanics with our collaborators in the Centre for Medical Engineering Technology (CMET) and at York we are founding members of the Centre for Human Palaeoecology and Evolutionary Origins, one of the largest groupings in the UK.

Website: www.hyms.ac.uk/researchcentres/cahs

Joint Centre for Cancer Studies

The Joint Centre for Cancer Studies is an interdisciplinary research centre created by Hull York Medical School and the Faculty of Science and Engineering at the University of Hull. The Centre aims to foster and promote translational cancer research.

The Centre’s research focuses around four main themes; imaging, tumour microenvironment, novel technologies and clinical studies.

Website: www.hyms.ac.uk/researchcentres/cc

Centre for Cardiovascular and Metabolic Research

The Centre for Cardiovascular and Metabolic Research brings together research expertise to tackle heart failure, diabetes and blood-related disorders. The Centre focuses particularly on treatments that can be translated from the laboratory bench to the bedside, with a real impact on patient care. The Centre is a partnership between HYMS and research groups from the Department of Biological Sciences at the University of Hull.

Website: www.hyms.ac.uk/researchcentres/ccmr

Centre for Education Development

The HYMS Centre for Education Development (CED) seeks to capture, consolidate and develop the expertise which underpins medical education within the Medical School. The CED provides a vibrant academic base supporting the development of high quality evidence-based medical education.

Website: www.hyms.ac.uk/researchcentres/ced

Centre for Health and Population Sciences

The Centre for Health and Population Sciences brings together expertise to address issues related to population health and healthcare. The Centre studies large-scale patterns of risk for various diseases and health conditions, the effectiveness of medical interventions, and how best to put medical research into practice. Areas of significant focus include mental health, cancer care, palliative medicine, tobacco control interventions and patient involvement in health care.

The Centre includes researchers from the Department of Health Sciences at the University of York, SEDA at the University of Hull, and from other groupings, including the Department of Philosophy at the University of Hull, the Centre for Reviews and Dissemination at the University of York and the Centre for Health Economics at the University of York.

Website: www.hyms.ac.uk/researchcentres/chaps

Centre for Immunology and Infection

The Centre for Immunology and Infection (CII) is a joint research centre created by the Hull York Medical School and the Department of Biology at the University of York. Research within CII ranges from fundamental studies on the pathogenesis of infectious and non-infectious disease through to first-in-man clinical research. More information about CII is given on page 11.

Website: www.york.ac.uk/cii

Centre for Neuroscience

Our research in neuroscience, especially neuroimaging, is conducted through close links with York Neuroimaging Centre (YNiC), a research facility for investigating human brain function using non-invasive imaging techniques. Facilities include 3-Tesla magnetic resonance imaging, whole-head magnetoencephalography, high density electroencephalography, transcranial magnetic stimulation and high performance parallel computing.

The Centre has become the hub of a multidisciplinary approach to understanding structural, chemical, functional and theoretical aspects of neuronal mechanisms. We work closely with colleagues in the Departments of Chemistry and Psychology at the University of York, and with the Department of Psychology at the University of York. See page 13 for more details about YNiC.

Website: www.hyms.ac.uk/research/academic-centres/centre-for-neuroscience

Staff list

A list of staff undertaking research in HYMS can be found on each centre’s web page.
Situated in the historic King’s Manor in the very heart of the medieval city of York, the Centre for Medieval Studies (CMS) is the UK’s largest and longest established centre for medieval interdisciplinary scholarship. It enjoys an international reputation as a world leader.

The Centre for Medieval Studies’ research and teaching spans all periods of the Middle Ages and encompasses the medieval world from Scandinavia to the Mediterranean and Syria. Areas of specific interest include the Vikings, political cultures, religion of the Church and laity, language and literature (Latin and vernaculars), urban life, family, gender and sexuality, chivalry and aristocracies, buildings archaeology, settlement history and material culture, architectural history, stained glass and manuscript studies. We promote interdisciplinary scholarship through team teaching across archaeology, art history, literature and history by co-supervision of research students and through our many interdisciplinary research groups. We strive to develop new research agendas that dissolve traditional disciplinary boundaries and explore evidence in new ways. We see our students as central to these objectives.

We offer a unique learning environment with a faculty of over 30 staff and currently 150+ MA and PhD students registered across the single and multidiscipline medieval programmes. Together we make a vibrant and sociable research community. Our programme of seminars, research groups and reading groups frequently brings together staff and students. Many are student-run and allow students to give papers. Currently there are research groups devoted to religion, early medieval studies, households, romances and political culture. Reading groups meet to explore texts in late Anglo-Saxon, medieval Latin, Old French and Old Norse. We organise a termly York Medieval Seminar, which invites distinguished scholars to give a public lecture and a graduate seminar. We also regularly host local, national and international conferences on varying aspects of the Middle Ages. The Centre’s own student-led drama group, the Lords of Misrule, stages several productions a year.

The CMS is active in a number of international collaborative projects and student exchanges. With the University of Southern Denmark it hosts the international Centre for Medieval Literature.

Your future

Successful completion of this MA endows students with the professional and personal skills required to progress to PhD research or to pursue immediate employment in a relevant field such as teaching, curatorship or broadcasting. Alumni have progressed to PhD research in York and further afield and postgraduate-level teacher training in the UK and USA, and found employment in the heritage industry, museum curatorship, libraries and archives and university administration, and as university lecturers.
Programmes overview

The MA in Medieval Studies provides an intellectually stimulating and interdisciplinary introduction to the study of the Middle Ages. It draws students from different disciplinary backgrounds and provides them with an opportunity to develop a wide range of skills and approaches. It also serves as a foundation for those wishing to go on to doctoral research. Teaching is offered in the historic King’s Manor site and draws upon faculty from the Departments of Archaeology, English, History and History of Art. Students can choose modules from across the entire chronological range of the Middle Ages. The programme as a whole is made up of both single-discipline and interdisciplinary units and provides scope for students to find their own particular areas of interest and develop these at the dissertation stage.

We recognise that, for many students, taking an interdisciplinary programme is more challenging (and more exciting) than following a single-subject programme. We are familiar with the problems students encounter in tackling new subjects and approaches at graduate level, and the structure of the Medieval Studies MA and its assessment are designed to take account of this. Also, students may choose whether to write their dissertations using the resources of more than one discipline, or to specialise in just one.

MA in Medieval Studies

We regard the interdisciplinary MA in Medieval Studies as one of the most stimulating and creative programmes that we teach. The courses both grow out of and feed into the publications of the Centre’s staff, to organise and direct research groups, and to assist in research on any topic within the chronological period AD400 to 1550, as long as it is within the competence of a supervisor attached to the Centre.

Your background

To apply, you should normally have completed an undergraduate degree with a First or 2:1 or their equivalents in a subject related to one of the four disciplines of the CMS: Archaeology, Art History, History or Literature. We also welcome mature students, who have been very successful in our Masters degree programme and who bring to their participation in the Centre their wealth of experience in other fields.

PhD research degrees

York is one of the few universities in the world to offer not just the single-discipline but also the interdisciplinary research degree of PhD in Medieval Studies. The CMS can provide joint supervision on any combination of the following subjects: Medieval Archaeology, Art and Architectural History, History (social, economic, political, cultural, ecclesiastical, intellectual and gender) and Literature (including Old and Middle English, Old Norse, Latin, Italian and French). Applications are welcomed from candidates who wish to combine any of these subjects – by using both historical and archaeological evidence, for example, or relating art–historical to literary and/or historical sources – and staff will willingly help you formulate your research project.

As a research student at the CMS you will have two supervisors drawn from two of the four disciplines at the CMS. In the first year you may also receive training in Latin, palaeography, and other languages or primary skills you may need to complete your research. You will enjoy the active intellectual culture of the CMS, where students and staff meet regularly in seminars, lectures and informal discussions.

You will be encouraged to develop your professional skills as part of our research and teaching community of scholars. There are opportunities to assist in research on funded projects directed by members of staff, to organise and direct research groups, to assist in organising conferences, and to have a say in the running of activities at the Centre. There are also opportunities to gain teaching experience either in teaching Latin, Old English or Old Norse, or in teaching in the undergraduate Departments of English and Related Literature, History, History of Art or Archaeology.

Staff of the CMS also supervise PhD candidates who prefer to undertake medieval research in a single discipline: Archaeology, English, History of Art or History. If you are interested in pursuing single-discipline research, see the relevant departmental listings. Even as a single-discipline PhD candidate, you will be welcome to base yourself at the CMS in the King’s Manor and to participate in all CMS activities.

“The MA in Medieval Studies at York offers a course focused on interdisciplinary study in a world-class institution, with the opportunity to learn medieval languages at the same time as studying the manuscripts. The research environment at the Centre is amazing. There’s a supportive academic community, a lively programme of seminars, reading groups and social gatherings. I love being based at King’s Manor in the heart of the city as well as having the chance to visit other historic sites nearby.”

ALANA, PhD IN MEDIEVAL STUDIES
Your background

Normally you should have completed a Masters degree or equivalent before admission for the PhD. EU applicants should be aware that AHRC funding is very rarely awarded to candidates who have not undertaken prior research training.

Available funding

Besides national and international funding and University of York–based funding (see the finance section of the postgraduate study website), the CMS also offers MA bursaries, each awarded to the best–qualified applicants who have not received other funding, and open equally to home, EU and overseas applicants. We also offer a £1,000 bursary sponsored by the Richard III Society to an MA student whose research interests focus on Richard III or events of his reign. From time to time, when we hear of other funding opportunities in Medieval Studies, we post these on our website, www.york.ac.uk/cms/pg-funding.

Staff list

Director
Craig Taylor, DPhil (Oxford) History: Politics and ideas in late medieval France and England; chivalry and the Hundred Years War

Professors
Tim Ayers, PhD (London) History of Art: Late medieval stained glass, sculpture and architecture in England
Peter Biller, DPhil (Oxford) History: Medieval heresy; inquisition; proto–racial thought; history of medicine
Catherine Cubitt, PhD (Cambridge) History: Anglo–Saxon history; early medieval religious and cultural history; gender
Guy Halsall, PhD (Cambridge) History: Social history and archaeology of Merovingian Gaul; violence and warfare
Linne Mooney, PhD (Toronto) English: Late medieval English literatures, palaeography and codicology, especially scribes
Christopher Norton, PhD (Cambridge) History of Art: Ecclesiastical arts and architecture in England and France; medieval pavements; monastic art and architecture
Mark Ormrod, DPhil (Oxford) History: Political and administrative history of later medieval England
Sarah Rees Jones, DPhil (York) History: Social history and social ideals; English cities, landscapes and communities
Julian Richards, PhD (CNAA) Archaeology: Early medieval NW Europe; Anglo–Saxon and Viking periods; data systems
Elizabeth Tyler, DPhil (Oxford) English: Anglo–Saxon and early Norman literatures; multilingualism; women

Readers
Jeremy Goldberg, PhD (Cambridge) History: Later medieval social and cultural history; gender; the family; identity
Jane Hawkes, PhD (Newcastle) History of Art: Early medieval (insular) art and architecture, especially sculpture
Amanda Lillie, PhD (London) History of Art: Italian Renaissance art and architecture, especially palaces and villas
Matthew Townend, DPhil (Oxford) English: Old English and Old Norse; philology; Victorian medievalism

Senior Lecturers
Sarah Brown, MA (York) History of Art: Stained glass and the history of its restoration and reception
Michele Campopiano, PhD (SNS, Pisa) Archaeology: Historic landscapes; church archaeology
Jonathan Finch, PhD (London) Archaeology: Archaeology of medieval and early modern ‘public’ buildings; York Minster
Kate Giles, PhD (York) Archaeology: The archaeology and conservation of medieval buildings; heritage policy
Jane Grenville, PhD (York) English: Medieval romance; practice of fiction; women’s social games; Chaucer; Gower
Nicola McDonald, PhD (Oxford) History of Art: 15th– and 16th–century northern art; religious painting and portraiture
Jeanne Nuechterlein, PhD (Berkeley) Archaeology: Economic and social archaeology in Europe and the Mediterranean
Steve Roskams, BA (Cambridge) Archaeology: Archaeology of medieval buildings, monastic art and architecture
Sethina Watson, DPhil (Oxford) History: Religion, towns, hospitals and the needy in England, c1050–1300

Lecturers
Michelle Alexander (née Mundee), PhD (Durham) Archaeology: Biomolecular techniques; zooarchaeology; medieval archaeology
Steven Ashby, PhD (York) Archaeology: Viking Age England and Scotland: the production and consumption of portable material culture
Henry Bainton, PhD (York) English: Old French; Latin textual cultures of the Middle Ages (especially historiography and romance); literacy, orality and performance; national and regional identities
Kenneth Clarke, PhD (Oxford) English: Chaucer and the Italian Trecento; Boccaccio; Dante; book history; word and image
Mary Garrison, PhD (Cambridge) History: Early medieval literary, cultural and intellectual history; epistolography; rhetoric
Emanuele Lugli, PhD (New York) History of Art: Mediterranean art, architecture and visual culture 1000–1500
Aleks McClain, PhD (York) Archaeology: Archaeology of medieval buildings, monastic art and architecture
Harry Munt, PhD (Oxford) History: History of the Islamic world; medieval Arabic history writing
Lucy Sackville, PhD (York) History: Religious and intellectual history of the central Middle Ages (Italy and southern France)
Hanna Vorholt, PhD (Berlin) History of Art: Medieval art and visual culture; illuminated manuscripts; Jerusalem
George Younge, PhD (Cambridge) English: Old English texts; Middle English and French textual cultures in the 12th and 13th centuries
The Centre for Modern Studies (CModS) represents a thriving interdisciplinary community of academic staff and postgraduate students in the period after 1830, drawing scholars from Archaeology, English and Related Literature, History, History of Art, Philosophy, Politics, Sociology, the Centre for Women’s Studies, the Department of Theatre, Film and Television, the Institute for the Public Understanding of the Past and the Centre for Applied Human Rights.

The Centre seeks to promote innovative, significant, world-class research at a number of levels and from a wide variety of theoretical and methodological perspectives. Housed in the Humanities Research Centre, it offers a vibrant, state-of-the-art place to develop research at the heart of the campus. The Centre sponsors an exciting, annual programme of visiting speakers, conferences, symposia and workshops, organised by both staff and postgraduate students, and our Postgraduate Forum creates regular opportunities for interdisciplinary exchange, with a termly programme of events and an annual summer conference.

In addition, every year, the Centre provides a number of small project grants to aid interdisciplinary work across the humanities and social sciences in the modern period. Postgraduate students may apply for these grants to organise lectures, workshops, study days, conferences, graduate symposia and reading groups, or to facilitate events where scholars can interact with one another as a means to developing new interdisciplinary research and networks.

The Centre also cultivates more sustained research projects in a number of regularly changing areas, known as research strands. Led by staff in one or more departments at the University, these serve as focal points for activities and for funding within the Centre. Strands to date have included Narrative; Cultures of the Global; World Systems/Systems of the World; Aftermaths; Translating Freedom; Modernity, Creativity and Innovation; Ordinary/Everyday/Quotidian; Economy and Society; Death; Nothing; and Complexity. Further details of our current strands can be found on our website.

Whether you wish to progress to PhD research, or take up a career in the public sector, media or the arts, this MA will help you to develop the necessary skills in organisation, analysis and communication. As a CModS student, you will have many opportunities to meet and talk informally with leading academics from within the University and across the world, as well as professionals in areas such as the media, arts and criticism, and museums and art galleries.
Programme overview

MA in Culture and Thought after 1945

This MA offers a unique opportunity for interdisciplinary, taught postgraduate study of the intertwined theoretical, cultural and historical developments of the contemporary period. The programme can be studied either full-time for one year or part-time over two years. You may choose from a wide range of optional modules offered by our partner departments of Archaeology, English and Related Literature, History, History of Art, Sociology and the Centre for Women’s Studies. This will allow you to construct a programme that suits your particular interests. Throughout the programme, you will be encouraged to approach the period by bringing together the subject matter and methodologies of multiple disciplines in original and exciting ways.

As a full-time student, you will take a core module and one optional module in the Autumn Term and two further optional modules in the Spring Term. As a part-time student, you will take the core module in your first Autumn Term, and then one optional module in each of the following Spring and Autumn Terms. Each module will be taught by weekly small group seminars and assessed by an essay of approximately 4,500 words. You will also research and write a dissertation of 15,000–20,000 words over the Summer Term and summer vacation.

The core module

The core module is team-taught by staff from the seven departments and centres involved in the MA. It will introduce you to a variety of approaches to studying the art, culture, politics and thought of the contemporary period. In each session, you will explore a concept that has been central to defining the period for different disciplines – for example, ‘postmodernism’ in English, ‘decolonisation’ in History of Art or ‘decolonisation’ in History. By examining texts that have contributed to or reflect the development of these concepts, you will gain an understanding of the ways in which each discipline views the period, and begin to explore the ways in which the approaches of different disciplines can be combined to conceptualise and analyse the contemporary era.

Option modules

The option modules currently on offer can be found on our website. These vary from year to year, but may include the following:

- Art in the Age of ‘Network Capitalism’
- Cold War Culture: Literature, Film and Theory in Cold War Europe
- Conservatism in the United States since the Second World War
- Contemporary Art and its Markets
- Cultural Decolonisation in Postcolonial Britain
- Cultural Heritage Management
- Culture, Society and Globalisation
- End of Empire in the Caribbean
- Feminist Cultural Activism
- Gender and Diasporic Identities
- Gender, Violence and Justice
- Historical Archaeology
- Ideas and Institutions
- Innovative Fictions since 1950
- Law and Social Control
- Narrative, Fiction and Theory
- Nation, Genre and the Past in British and American Cinema
- New Directions in Feminist Thought
- Origins of the Global South since 1947
- Political Fictions: Film and the Novel in the Global 21st Century
- Postcolonial Studies
- Queering Theory: Eve Kosofsky Sedgwick
- South African Literatures
- Themes and Issues in Contemporary Sociology
- Theory and Historiography
- The Uses of Photography
- Women, Citizenship and Conflict
- Writing the Body.

By drawing on the modules available in a given year, you will be able to create pathways through the degree that highlight and develop your particular interdisciplinary interests. For example, students with broad interests in cultural theory and social politics might select modules such as Gender, Violence and Justice, South African Literature, and Themes and Issues in Contemporary Sociology.

Students with interests in aesthetics broadly defined might draw on History of Art modules such as The Uses of Photography, as well as Narrative, Fiction and Theory in English. Thematic pathways may also be constructed that allow you to explore specific political and cultural problematics as they unfold across disciplines.

The MA handbook provides students with suggestions for pathways that might suit various research interests, but you are in no way limited to these pathways. Instead, students on the MA are encouraged to combine modules in unique ways that enable their own intellectual development and the creation of original and compelling dissertation projects.

Your background

You will normally be expected to have at least a good 2:1 honours degree in a relevant humanities or social science subject, or its equivalent.

Available funding

The Centre offers a number of studentships for home and international students. Further details can be found on our website, www.york.ac.uk/modernstudies/pg-funding.

“Having studied here as an English undergraduate, I was well aware of the excellent standard of teaching and support provided by staff. This, and the fact that the Culture and Thought MA covers a wide range of interests and disciplines, giving me the freedom to push myself intellectually, made me want to continue at York. The compulsory module touches on archaeology, philosophy, memory and everything in between, while the wide variety of additional modules has allowed me to craft my own MA, putting me in good stead for when I apply for a PhD.”

</table>
The Department of Music is home to one of the largest postgraduate schools in the UK and is also one of the top-ranking research departments in the UK.

We host a vibrant and international community of researchers, composers and performers. We have specialist research interests in composition, performance, production, musicology, church music, music theatre, jazz and community music.

The Department provides excellent facilities for postgraduate study, including the new Contemporary Music Research Centre (CMRC) which houses recording studios, and the Rymer Auditorium (a high-specification performance space). Research is supported by well-stocked library resources such as the Humanities Research Library and the University of York Sound Archives. This includes Music Preserved’s collection of over 5,000 off-air recordings and also the John R T Davies Jazz Collection of 16,000 rare 78rpm records (see [www.york.ac.uk/music/about/resources/sound-archives](http://www.york.ac.uk/music/about/resources/sound-archives)).

Research postgraduates, staff and visiting speakers present their work regularly at the Composition and Research Seminar series. These provide an important platform for sharing research ideas and allow students (both MA and PhD) to gain insights into the concerns and working methods of researchers working in other areas.

In addition, the Sir Jack Lyons Concert Hall supports a range of performance ensembles including the University, Chamber, The 24 and Gospel Choirs; the Symphony, Chamber, Baroque, Sinfonietta and Jazz Orchestras; the Chimera (new music), Gamelan and Piano Ensembles and the Viol Consort. Postgraduates can work closely with these and with the four associate ensembles (Compagnia d’Istrumenti, Julian Argüelles Octet, I Fagiolini and Quatuor Diotima), as well as with local specialist groups (Yorkshire Bach Choir, Yorkshire Baroque Soloists).

The Department presents a full professional series of concerts and festivals. For further information see [www.york.ac.uk/concerts](http://www.york.ac.uk/concerts).

Your future

York Music postgraduates have gone on to be performers and conductors, music librarians, teachers, freelance composers, journalists, broadcasters and academics. We respect the independent nature of your pursuits and we encourage you right from the start to think, write and perform independently. MA students organise their own conference to provide a forum for this.
Programmes overview
The Department of Music offers a range of postgraduate programmes that can be tailored to meet your individual needs. These include an MA by research as well as taught Masters degrees, and an MPhil/PhD in Music that can be taken by thesis, performance or composition. Masters, Diploma and Certificate programmes are usually one year full-time or two years part-time, an MPhil is usually two years full-time or four years part-time, and a PhD is usually three years full-time or six years part-time, with the possibility of one further year for writing up.

Applicants to our programmes are carefully matched with the appropriate supervisor as part of the admissions process, ensuring that you receive the highest level of research support during your time in the Department. Applications for any of our programmes must include relevant examples of previous work, including recordings of performances where applicable. Information on all our programmes can be found at www.york.ac.uk/music/postgraduate/programmes, or by contacting the Postgraduate Administrator.

MA and PGDip/Cert in Music

Our popular taught MA programme and new Postgraduate Diploma and Certificate offer you the facility to combine focused study in your research area with an introduction to research techniques and methodologies. You will need to apply for a specialist research area: options include analysis, composition, conducting, contemporary studies, critical studies, electroacoustic composition, English church music, ethnomusicology, improvised music and jazz, music theatre, performance practice, piano studies, solo voice ensemble singing. Other areas of study relating specifically to the expertise of academic staff may also be proposed.

These programmes provide a useful preparation for further education (including PhD programmes, conservatoire training or PGCEs), as their structure allows you to explore a variety of interests and can help you to shape the course of your future career. Graduates of the MA in Music now work as teachers, lecturers, performers, freelance composers, recording artists, radio presenters and curators.

The courses are divided into three strands, which provide the basis for a wide-ranging series of seminars. All candidates take classes in research techniques. They also attend specialist seminars, concentrating on the work in their field. Submissions will be related to your area of specialisation, and your supervisor will work closely with you and support you in gaining the necessary research skills. Final submissions will normally take the form of a folio of compositions, performance projects supported by written documentation, or a thesis of approximately 15,000 words (three shorter essays for the Diploma and Certificate).

MA in Community Music
York was the first university to establish a Masters programme in Community Music, and we continue to adapt and respond to current training needs, keeping it at the cutting edge of scholarship and professional development. The programme is practical and relevant, an ideal preparation for all aspects of community and outreach work in music. Previous graduates are employed worldwide in orchestral education, special schools, hospitals, prisons and arts management, and as researchers and freelance music leaders.

The MA in Community Music can be taken in one year full-time or two years part-time. The programme is taught primarily through a series of short course modules (usually five days in length), covering a range of areas that include arts development in education, music and disability, arts administration, world music and music technology. Assessment consists of two portfolios of work and a final dissertation that is linked to a placement in a community setting. Portfolios may include a wide variety of submissions, including essays, compositions, arts plans and reports. The placement consists of not less than ten days of regular and structured contact, and assessment is based on criteria normally accepted in education and similar work-training placements. The accompanying dissertation is usually between 10,000 and 12,000 words.

MA and PGDip/Cert in Music Education: Instrumental and Vocal Teaching

The new MA and Postgraduate Diploma/Certificate in Music Education are aimed at students who wish to develop their pedagogical skills, drawing upon and deepening existing practical experience as instrumental/vocal teachers.

Working closely with your supervisor, you will develop theoretical and practical understanding of instrumental teaching, research skills and strategies for reflective practice – skills enhancing employability and capability. You will participate in seminars and practical sessions where you will have the opportunity to teach others and receive feedback on your teaching skills.

There will be regular meetings with the programme leader to discuss your progress and plan and prepare work for assessment, which will include both written and practical work, with a final submission consisting of either an extended essay or a portfolio of lessons with commentaries.

MA and PGDip/Cert in Music Production

This MA degree is aimed at students wishing to explore the practice and theory of Music Production. It combines a very broad view of the techniques and applications of production for audio media with the subsequent development of more tightly focused individual skills and scholarship. Music Production might involve anything ranging from the creation of entirely synthetic material using computer-based techniques to the successful capture of acoustic performances, as well as the restoration and reconstruction of existing audio heritage. There are also important philosophies and technologies underlying this discipline that are constantly evolving.

The use of technology for the creation and capture of music is a core part of the Department of Music’s activities. The Department is home to the Contemporary Music Research Centre, one of the finest facilities for listening to and recording sound in the UK. Throughout the course, MA Music Production students are expected to use these facilities to make recordings and other audio artefacts. Running alongside this practical activity are taught modules which provide an understanding and fluency in audio signals and systems and the production chain, together with listening and analytical skills. In the final six months, students produce a self-directed portfolio and undertake a large research project. The course can also be taken part-time over two years.

Your background
Applicants for the MA in Music, the MA in Community Music, the MA in Music Education, the MA in Music Production and the Postgraduate Diplomas/Certificates in Music, Music Education and Music Production are normally required to have achieved at least a 2:1 or equivalent in a related undergraduate degree; professional experience can be accepted in lieu of formal education.

Students applying for the MA or Postgraduate Diploma/Certificate in Music must indicate the subject area in which they wish to specialise in the Personal Statement section of their application form.
MA in Music (by research)

The MA by research provides the option for students to undertake an individual course of research directly with a supervisor in the Department. All subject areas supported by the Department (including composition, electroacoustic composition, ethnomusicology, critical studies, analysis, English church music, music theatre) can be considered. The final outcome is a portfolio of work, which can be essay-, performance- or composition-based, as appropriate to the subject studied.

Working closely with your supervisor, and with the support of your internal examiner in regular Thesis Advisory Panels, you will research and prepare work to fulfil your submission requirement. Submission for an MA in Music (by research) can be either a portfolio of performances or compositions, or a written thesis of approximately 30,000 to 40,000 words. The Department will also consider individually tailored submission requirements where appropriate to the research project.

MA in Music Technology (by research)

The MA in Music Technology (by research) is aimed at meeting the needs of research-focused graduates with experience in music technology or audio–engineering. This stream is specifically focused at high–level creators interested in composition, production and contemporary aesthetic approaches to audio.

Working closely with your supervisor, and with the support of your internal examiner in regular Thesis Advisory Panels, you will research and prepare work to fulfil your submission requirement. Submission for an MA in Music Technology (by research) consists of a portfolio of work, usually comprising three pieces: a work for fixed media, a work for installation and a work for live performance.

Your background

Applicants for the MA in Music (by research) and the MA in Music Technology (by research) are normally required to have achieved at least a 2:1 or equivalent in a related undergraduate degree; professional experience can be accepted in lieu of formal education. A detailed research proposal is required to ensure that you have sufficient skills to embark on a research degree and to pair you with an appropriate supervisor.

MPhil/PhD

The MPhil/PhD in Music at York can be taken by thesis, composition or performance. PhDs are offered in any area of research that is supported by the Department.

Working closely with your supervisor, and with the support of your internal examiner in regular Thesis Advisory Panels, you will research and prepare work to fulfil your submission requirement. Submissions for the MPhil/PhD in Music vary according to your area of specialisation:

- Candidates for the MPhil/PhD by composition and electroacoustic composition are required to submit a portfolio of approximately eight compositions, accompanied by a brief commentary.
- Candidates for the MPhil/PhD by performance are required to submit a portfolio of up to six discrete performance projects, fully documented and supported by appropriate commentary and a resource list. Alternatively, a performance portfolio may comprise a single extended public or recorded performance, accompanied by a single original thesis of 30,000 to 50,000 words (PhD) or 20,000 to 25,000 words (MPhil) supported by a resource list.

As in other institutions, candidates are initially registered on the MPhil degree, and upgraded to PhD during the second year of their course.

Your background

Applicants for the MPhil/PhD in Music are normally required to have achieved at least a 2:1 or equivalent in a related undergraduate degree and to have gained a Masters degree in a related subject; professional experience can be accepted in lieu of formal education.

Available funding

Funding for these programmes is provided from three sources: Department of Music awards (see below), University of York awards (described on page 28) and external awards. Full details of available awards can be found on the Department postgraduate funding web page (www.york.ac.uk/music/postgraduate/funding), or contact the Postgraduate Administrator who will be happy to help.

The Department of Music offers an exceptional range of support, funded in part from generous endowments by benefactors. Scholarships, fellowships and assistantships include:

- Arts and Humanities Research Council: the White Rose College of the Arts and Humanities (W RoCAH) offers over 50 AHRC studentships per year to candidates with a place for doctoral study at the Universities of Leeds, Sheffield or York. Applicants for an AHRC studentship must have applied for a place already and may only apply for funding at one of Leeds, Sheffield or York. The application form and details of how to apply are only available from the W RoCAH website wrocah.ac.uk/new-student/ahrc-competition. Subject to AHRC eligibility criteria, the scholarships cover tuition fees and a grant towards living expenses.

- Sir Jack Lyons Research Scholarship: this award covers full home fees plus a stipend of between £2,500 and £5,000 a year, for a PhD degree in any area of music supported by the Department.

- Postgraduate Assistantships (work/study awards): the Department of

“Having completed my BA and MA degrees at York, I knew this was the place to embark on my PhD. The dynamic nature of the Department, rich with music ensembles and expert staff with a wealth of different interests, allows me to combine my passion for performance practice with more philosophical pursuits. The inspiring working relationships I have developed with the academic staff and my ever-supportive instrumental teacher create an encouraging and stimulating environment in which to thrive both academically and personally.”

JENNIFER, PhD IN MUSIC
Music offers a number of assistantships to postgraduates by which qualified individuals acquire experience appropriate to their career paths through practical work within the Department. Please see our website for full information on the types and values of assistantships available at the present time. Previous titles have included the Vinson Assistantship for Internet Services and the York Concerts Administration Assistantship, and are normally of a value between £500 and £4,000 a year. Postgraduate awards: the Department has a number of scholarships available of one year’s duration, of amounts normally between £250 and £3,000. These include the Vinson Award, the Dixon Scholarship, the Young Musicians Fund Awards and the Nonhebel Scholarship.

### Staff list

For a full summary of the work of individual staff members, please see www.york.ac.uk/music/staff.

#### Professor and Head of Department

**Ambrose Field**, PGCE, PhD (City)  
Composition; postmodernism; music education

#### Professors

**William Brooks**, MMus, DMA (Illinois)  
Composition; American music and culture; popular music and jazz

**Roger Marsh**, PhD (York)  
Composition; music theatre; contemporary music; Japanese music

**Peter Seymour**, DMus (York), FRCO, ARCM, LTCL  
Performance practice; vocal/keyboard music 1550–1900; Lieder; conducting

**Jonathan Wainwright**, PhD (Cambridge)  
16th- and 17th-century Italian and English music; performance practice; editing; church music

#### Professors Emeritus

**David Blake**, MA (Cambridge)  
Composition

**Nicola LeFanu**, DMus (Durham), FRCM  
Composition

#### Readers

**Robert Hollingworth**, BA (Oxford)  
Performance; ensemble singing; music and drama

**Tim Howell**, PhD (Southampton)  
Musical analysis; the music of Sibelius; contemporary Finnish music

**Thomas Simaku**, PhD (York)  
Composition; European modernism; contemporary music

#### Reader Emeritus

**John Potter**, PhD (OU)  
Writer and performer

#### Senior Lecturers

**Catherine Laws**, PhD (York)  
Contemporary music performance practices; embodiment and gesture in music; words and music; collaboration

**Nicky Losseff**, PhD (King’s College London)  
19th-century cultural studies; Bartok; aesthetics of silence; music and spirituality

**Federico Reuben**, PhD (Brunel)  
Composition; live electronic performance; sound artist

**Neil Sorrell**, PhD (Wesleyan)  
North Indian music and Javanese gamelan: structure, performance and composition

**John Stringer**, PhD (York)  
Composition; contemporary performance practice; conducting

#### Lecturers

**Bruce Cole**  
MA in Community Music course leader; composition; education

**Jonathan Eato**, PhD (York)  
Composition; improvisation; jazz performance practice; interdisciplinary performance

**Hauke Eggermann**, PhD (Hanover)  
Music psychology

**Daniel March**, DPhil (York)  
Composition; musical analysis; music of the 20th and 21st centuries

**Aine Sheil**, PhD (King’s College London)  
Contemporary and 20th-century opera production; theatre and performance theory; Wagner; reception theory; gender theory

**Martin Suckling**, PhD (RAN)  
Composition; performance; chamber music; contemporary music

**Jez Wells**, PhD (York), MAES  
Music technology; audio engineering; spectral modelling; sound recording

#### Research Fellow

**Liz Haddon**, PhD (York)  
Investigating musical performance; music education

#### Honorary Fellows

**Julian Arguelles**  
Jazz composer and pianist

**Dame Janet Baker**, CH  
Opera and Lieder singer

**Jenny Doctor**, PhD (Northwestern)  
Musicologist; sound archivist

**Ustad Amjad Ali Khan**, DUniv  
Indian Sarod player and composer

**David Lumsdaine**, DMus  
Composition

**Donald Mitchell**, CBE, PhD, DUniv  
Publisher, critic, author

**Richard Shephard**, DMus, DUniv  
Composition

**Trevor Wishart**, PhD (York)  
Composition

**Changjun Xu**, PhD (CCOM)  
Composition; President, Tianjin Conservatory of Music
The Department is a vibrant place in which to pursue postgraduate programmes in Philosophy. It is internationally recognised for the quality of its research and in the 2014 Research Excellence Framework assessment 96 per cent of its research activity was judged to be of international quality. Postgraduates are right at the centre of the Department’s life – teaching undergraduate seminars, participating in colloquia and pursuing research in fundamental areas of philosophy.

The Department brings together original research and stimulating teaching in an informal, friendly setting. Our research is recognised for its international influence across a wide range of topics: including philosophy of mind, aesthetics, metaphysics and ethics (also bioethics), as well as the history of philosophy, especially Plato, Aristotle, Berkeley, Kant, Fichte, Frege, Wittgenstein, Russell and G E Moore. All members of staff are committed to the highest standards of excellence in research and they welcome applications from research students to work under their supervision.

The Department is an active centre of research in all kinds of ways. The Editor of the acclaimed British Journal for the History of Philosophy is one of our Philosophy professors. Prominent philosophers from round the world speak at our regular philosophy colloquia and the Department also hosts Royal Institute of Philosophy lectures. The Centre for Research into Imagination, Creativity and Knowledge (CRICK) aims to stimulate research in the philosophy of mind, epistemology and aesthetics, focusing on the nature of creativity and innovation, their relation to the imagination, and their role in extending the frontiers of human knowledge in the arts and sciences. Research links with the Universities of Leeds and Sheffield have established the White Rose Aesthetics Forum and Centre for History of Philosophy (ChiPhi), with regular meetings rotating round the three universities.

The postgraduate community forms a vital part of the life of the Department. Postgraduates are valued participants in all aspects of the Department’s activities: research, teaching, seminars and conferences.

Students with an MA in Philosophy from York sometimes proceed to a research degree (PhD) and then into academic careers. But a Masters in Philosophy is a useful qualification in its own right, equipping students with transferable skills, such as an analytical approach to problem solving, clarity of expression, rigour of argument and the ability to grasp complex ideas, all of which are much prized by discerning employers.
Programmes overview
The Department offers a range of programmes: a graduate diploma, a taught MA programme, and research programmes at the MA, MPhil and PhD levels.

The MA in Philosophy is particularly suitable for students intending to go on to research in core areas of the subject. The MPhil and PhD programmes provide an opportunity for research graduates to do intensive guided research on a topic of their own choosing with a specialist supervisor.

Graduate Diploma in Philosophy
This programme is intended to provide an opportunity for students with no background in Philosophy to do advanced work in the subject and to obtain an honours-level qualification in it. The programme may be taken on either a full-time basis (nine months) or a part-time basis (18 months).

The first part of the programme aims to provide students with a knowledge of important topics in philosophy and also an opportunity to develop essential skills to engage critically with those topics. In this part of the programme, students take a selection of undergraduate modules from a range of modules open to them. In addition, students take the Postgraduate Research Skills module designed to provide training in writing skills, critical thinking and philosophical analysis.

The second part of the programme aims to give students experience in applying philosophical skills to a well-defined problem under the guidance of an expert in the area. To achieve this aim, students will prepare a written project based on independent research that is supervised by a member of staff.

The Graduate Diploma is sometimes used as a springboard for continuing to a Masters-level degree in Philosophy (although there is no automatic admission to the MA programmes).

Your background
The programme is open to those who already have a 2:1 Bachelors degree (or equivalent) in any subject.

MA in Philosophy
This Masters programme offers the opportunity to acquire the core knowledge and skills necessary to engage in philosophical research. As such it is an ideal preparation for doing a research degree, such as an MPhil or PhD, in Philosophy. The MA may be studied either full-time over one year or part-time over two years.

The taught element of the programme is designed to provide students with detailed knowledge of the main areas of philosophy. There are two core MA modules: Topics in Practical Philosophy, and Topics in Theoretical Philosophy. Students can choose two other modules from a wide range of available options, in accordance with their particular philosophical interests. This part of the programme enables students to acquire the core and specialist knowledge needed to pursue research in virtually any area of philosophy.

Other elements of the programme include the Postgraduate Research Skills module, which aims to help students develop essential skills in research, philosophical writing, leading discussion and presenting their work. There is also a Dissemination Practice module: students arrange a mini-conference at which they present and discuss their philosophical ideas.

The knowledge, skills and experience gained during the programme culminate in the dissertation. Students start thinking about their dissertation topic at the outset. A Dissertation Preparation module runs throughout the taught part of the programme. This allows students to develop their ideas for a dissertation, which can be the basis of applications for funding for a research degree. The dissertation itself is a sustained piece of critical writing on a topic of the student’s choosing. A member of staff with expertise in the relevant area will provide supervision.

Your background
The programme is open to those who already have a 2:1 Bachelors degree (or equivalent) which includes some philosophy.

MA in Philosophy (by research)
The MA in Philosophy (by research) offers students the opportunity to take a research degree in Philosophy full-time over one year or part-time over two years.

Students are supervised by an expert in their research area and will meet with their supervisor at least twice a term. Students also have a Thesis Advisory Panel which gives them strategic advice on their thesis. Assessment is solely by thesis, which should be between 20,000 and 30,000 words.

Your background
The programme is open to those who already have a 2:1 Bachelors degree (or equivalent) which includes some philosophy.

MPhil research degree
The MPhil offers students the opportunity to take a research degree in Philosophy full-time over two years or part-time over four years.

Students are supervised by an expert in their research area and will meet with their supervisor at least twice a term. Members of staff have research interests in analytic aesthetics, ancient philosophy, early modern philosophy (Descartes to Hume), philosophy of language and logic, philosophy of mind and psychology, philosophy of religion, metaphysics and epistemology, and contemporary practical and theoretical ethics. Students also have a Thesis Advisory Panel which gives them strategic advice on their thesis. Assessment is solely by thesis, which should be between 40,000 and 60,000 words.

Your background
The programme is available to students with an MA or equivalent in Philosophy.

“After teaching in Singapore and curating for an arts venue in Edinburgh, I wanted my research project to grow out of those interrelated experiences. I am exploring both fundamental, philosophical questions around meaning and purpose, while identifying useful principles for professional practice. York welcomes diversity in research and genuinely cares about the impact philosophy has in the ‘real world’. From supervisors and support staff to resources and training opportunities, this ethos is shared and delivered with a sense of commitment and community.”

ANU, PhD IN PHILOSOPHY
PhD research degree

The PhD offers students the opportunity to take a research degree in Philosophy full-time over three years or part-time over six years. All candidates are initially registered for the MPhil degree. Confirmation of registration for a PhD is dependent upon the submission of a satisfactory proposal and a sample of written work that meets the standards required for the higher degree. Confirmation is normally considered within 18 months for full-time students and within three years for part-time students.

Students are supervised by an expert in their research area and will meet with their supervisor at least twice a term. Members of staff have research interests in analytic aesthetics, ancient philosophy, early modern philosophy (Descartes to Hume), philosophy of language and logic, philosophy of mind and psychology, philosophy of religion, metaphysics and epistemology, and contemporary practical and theoretical ethics. Students also have a Thesis Advisory Panel which gives them strategic advice on their thesis. Assessment is solely by thesis, which should be between 60,000 and 80,000 words.

Your background

The programme is available to students with an MA or equivalent in Philosophy.

Available funding

For details on potential funding students should visit www.york.ac.uk/study/postgraduate/fees-funding.

Staff list

Professor and Head of Department

Gregory Currie, PhD (London) The arts and cognition

Professors

Michael Beaney, DPhil (Oxford) History of analytic philosophy; Chinese philosophy
Peter Lamarque, BPhil (Oxford) Aesthetics; philosophy of literature; philosophy of art
Paul Noordhof, PhD (London) Philosophy of mind and action; metaphysics; metaethics
Tom Stoneham, PhD (London) Early modern philosophy; ‘consciousness’; metaphysics
Catherine Wilson, PhD (Princeton) Early modern philosophy; aesthetics; moral philosophy

Professors Emeritus

Thomas Baldwin, PhD (Cambridge) 20th-century philosophy; bioethics
Marie McGinn, DPhil (Oxford) Wittgenstein

Reader

Stephen Holland, DPhil (Oxford), PhD (York) Bioethics; public health ethics

Senior Lecturers

Keith Allen, PhD (London) Philosophy of mind; history of modern philosophy; metaphysics
Amber Carpenter, PhD (London) Ancient Greek philosophy; classical Indian philosophy
David Efird, MDiv, DPhil (Oxford) Metaphysics of modality; philosophy of religion; philosophical theology
Mary Leng, PhD (Toronto) Philosophy of mathematics and science; philosophical logic; metaphysics
Christian Piller, PhD (Princeton) Moral philosophy; epistemology; philosophy and economics

Lecturers

Richard Chappell, PhD (Princeton) Ethics; metaethics
James Clarke, PhD (Durham) Rousseau; Fichte; Hegel; post-Kantian moral and political philosophy; philosophy of recognition
Dorothea Debus, DPhil (Oxford) Philosophy of mind and psychology; ethics, epistemology and metaphysics
Stephen Everson, PhD (London) Ancient philosophy; philosophy of mind and action
Barry Lee, PhD (London) Metaphysics; philosophy of language
Louise Richardson, PhD (Warwick) Philosophy of mind; perception
Helen Yetter-Chappell, PhD (Princeton) Consciousness; idealism; philosophy of mind

Teaching Fellows

Owen Hulatt, PhD (York) Adorno; critical theory; philosophy of recognition
Christopher Jay, PhD (London) Metaethics; history of ethics
Nick Jones, PhD (Nottingham) The American pragmatists; philosophy of religion; philosophy of Darwinism

Honorary Life Fellow

Andrew Ward, BA (Exeter) Aesthetics; Kant; personal identity

Honorary Fellow

Christopher Belshaw, PhD (UC Santa Barbara) Value theory; issues in life and death; personal identity; environmental philosophy
Physics

IELTS 6.0 with no less than 5.5 in each component, or equivalent (see page 33)

Programmes offered

- PhD (4 years in the Fusion CDT)
- PhD (3 years)
- MSc in Physics (by research)
- MSc in Fusion Energy
- Graduate Diploma
- MPhil

We believe that a sound academic reputation and a strong research base are of immense benefit to all our students. The Department is growing vigorously with an investment package, during the last five years, of 28 new academic posts, with professorships in photonics, biophysics, quantum information technologies and nuclear physics, plus major new laboratories and facilities including the York JEOL Nanocentre, the York Plasma Institute, the Biological Physical Sciences Institute and the York Centre for Quantum Technologies. We are host to the national EPSRC Centre for Doctoral Training in the Science and Technology of Fusion Energy (the Fusion CDT), which is a collaboration between universities and government research institutes. Reflecting this, our research student numbers have doubled, providing an exciting environment for new postgraduate students to join. Research is backed up by a large group of postdoctoral researchers and technical staff equipped with modern mechanical and electronic workshops and world-class experimental and computing facilities.

The 2014 Research Excellence Framework recognised the strength in depth and impact of physics research at York. It assessed over 80 per cent of our research output to be in the highest two categories of world-leading and internationally excellent, and half of our impact case studies were awarded the highest ranking of world-leading. With over 90 per cent of our staff assessed, this reflects the vitality of physics research in York.

In the National Student Survey, Physics at York always scores well and averages over 90 per cent in student satisfaction with the quality of the course. Such excellence in teaching also translates to our postgraduate teaching, professional skills training and unique outreach training programmes.

The Department of Physics has been awarded the Athena SWAN Silver award for commitment to women in science and Champion status within the Institute of Physics’ Juno programme in recognition of our actions to address the under-representation of women in Physics.

Our research is organised into three internationally recognised groups: Condensed Matter Physics (CMP), Nuclear Physics, and Plasma Physics and Fusion; details are given on the following pages.

Your future

Our graduates have forged highly successful careers as professional physicists in academia/research, government, industry and commerce. We pride ourselves on the versatility and skills that our Physics graduate programmes provide, which have led to career paths also in business management, engineering, finance, the computer industry and law. We are committed to working with our graduates to build a career, not just a degree award.
Programmes overview
The Department offers a taught MSc in Fusion Energy, three research degrees (MSc, MPhil, PhD) and a Graduate Diploma. The taught MSc in Fusion Energy introduces students to both magnetic and inertial fusion, with lectures, laboratory classes, workshops presented by outside experts and a summer project. It is a full-year programme starting in October and finishing in September.

Within each of the three research groups there are individual research projects of great variety: www.york.ac.uk/physics/postgraduate/researchprojects/currentprojects. Most projects can be offered as either a one-year MSc, or a three-year PhD or a four-year PhD – the latter as part of the EPSRC-funded Fusion CDT. In each case, you will be assigned your own research project, working closely with your academic supervisor and with the support of other postgraduate students, postdoctoral researchers and staff in your group. This will be complemented by a small number of taught courses. MSc by research students may progress to the second year of the PhD, subject to satisfactory progress, funding and available supervision.

The Graduate Diploma is a nine-month programme designed for applicants whose qualifications in a Physics or related degree are deemed insufficient for entry into the graduate programme and who lack the essential physics background required to continue on to a research degree. The programme consists of a selection of undergraduate modules plus a theoretical/experimental project.

Your background
The minimum entry requirement for the PhD is the equivalent of a 2:1 degree in Physics or a related topic. For both MSc programmes the minimum requirement is the equivalent of a lower second-class degree in Physics or a related topic. Other qualifications will be considered, as will part-time study.

MSc in Fusion Energy
Students study the basics of plasma physics and fusion plus some of the technology of fusion with the aim of preparing them for careers in the area or for PhD study. A range of teaching is provided including two workshops given by external experts, and a summer project in a research group, with the possibility of undertaking the project at major laboratories such as the Culham Centre for Fusion Energy or the Central Laser Facility.

We have recently signed a Memorandum of Understanding with the ITER International Organisation which will enable some students to take their research projects there. See www.york.ac.uk/physics/postgraduate/fusion-msc.

Condensed Matter Physics
The Condensed Matter Physics Institute offers a significant range of projects in the areas of experimental, theoretical and computational physics that encompass a broad range of exciting topics from fundamental aspects of condensed matter at the atomic scale to developing new applications for future technologies within four main research themes:

- nano and low-dimensional structures
- magnetism and spintronics
- quantum theory and applications
- biophysics and organic systems.

We work extensively at an interdisciplinary interface together with industry in international collaborations that are supported locally by our world-class facilities, including the York JEOL Nanocentre, advanced growth and fabrication facilities, powerful computational methods and extensive computing resources. The group has high international standing and has demonstrated leadership in several key areas of research, including the recently awarded €4m EU collaboration in ultra-fast magnetic recording technologies.

Our current developments in quantum physics and biophysics are detailed below. For more information on specific projects under the CMP research theme see www.york.ac.uk/physics/postgraduate/researchprojects/current-researchprojects/condensedmatter-physics.

Quantum Technologies
Fundamental aspects of quantum physics, such as superposition, entanglement and the irreversibility of quantum measurement, can be used to create new technologies that can outperform their traditional counterparts. To exploit this, York has established and invested in a new cross-disciplinary Centre for Quantum Technologies (YCQT), to undertake research and development in this growing and important field. York is also the lead institution for the EPSRC Quantum Communications Hub, which represents a major UK investment in quantum technology development, comprising eight universities and numerous industrial partners. In York Physics we offer a range of theoretical and modelling projects, linked to our research across the spectrum of quantum communications, metrology and computing.

In communications, we investigate new applications and protocols where quantum information can provide advantage or enhanced security. In metrology, we investigate the preparation and measurement of non-classical resources that can be used for quantum-enhanced measurement and sensing – considering both optical and matter systems. For quantum processing and computing, we investigate both architectures and techniques – such as measurement-based and quantum-bus-mediated approaches – along with the physical realisations of qubits and devices. These include optical and microwave systems, spins and various condensed matter systems such as quantum dots and superconducting circuits. In all of this quantum technology research, the role of decoherence is important. Very often its damaging effect on delicate quantum resources needs to be avoided. However, in some circumstances it can be turned to advantage, to stabilise or prepare quantum states. Quantum technology PhD students will join a strong, cross-disciplinary research collaboration that extends across the UK and internationally.

“I was attracted to study in the Department of Physics because unique interdepartmental collaborations allow me to be involved in a very new field of optical and nanomaterial research. I’ve particularly enjoyed seeing different perspectives and approaches to the same research questions. I’m very impressed by the sense of camaraderie among staff and students and the many opportunities to develop my career, such as teaching, attending and presenting at international conferences.”

SAM, PhD IN PHYSICS
The Physics of Life

Exciting and challenging PhD opportunities are available in biological physics/biophysics research at the physical–life sciences interface. This research spans multiple length scales from quantum biology and individual molecules through to single cell physics and the biophysics of cell populations and complex tissues. Recently, the University of York launched the Biological Physical Sciences Institute (BPSI), a multi-departmental research centre focused on developing cutting-edge research into physical science methods and analysis to tackle challenging biological questions, involving several research scientists in the Department of Physics running potential PhD projects in this area.

Nuclear Physics and Nuclear Astrophysics

Nuclear physics poses an array of challenging questions with the recent advent of accelerated radioactive beams further stimulating this exciting field of research. In nuclear structure, key questions of interest are the limits of nuclear existence, understanding new forms of structure and symmetry that emerge at these limits and investigating whether nuclei can be described in terms of our current knowledge of the known underlying fundamental interactions. Increasingly important is the application of our knowledge to astrophysics, such as understanding the energy generation in stars, as well as determining how heavy elements are synthesised in stellar explosions.

The group is internationally recognised and performs research in experimental and theoretical nuclear structure physics, nuclear fission and nuclear astrophysics. In recent years we have also expanded into nuclear applications—related work through the development of new detectors for use in industry as well as studies to acquire nuclear data that are relevant to future fusion and fission reactors. The detector work has led to the formation of an applications laboratory that has close connections with industrial partners and a goal to develop the next generation of radiation detectors. The very recent expansion into nuclear theory has provided a significant boost to the work performed by the group. At the present time, scientific activity in this area is focused on deriving energy density functionals that can precisely describe nuclear spectroscopic data. This work is performed in collaboration with colleagues in Finland, Warsaw and Michigan State University. Additional areas of theoretical research are anticipated later in the year following the appointment of a new member of staff.

The group conducts a diverse experimental and theoretical programme with the opportunity to be a part of large-scale, international projects and for travel to a range of overseas laboratories in France, Finland, Germany, Switzerland, the USA, Japan and Canada. Our extensive collaborative network, high international reputation and expert training ensure that our graduates are in very high demand in the nuclear industry, medical physics, computational physics, finance and academia.

For more information on specific projects under the Nuclear Physics and Nuclear Astrophysics research themes see www.york.ac.uk/physics/postgraduate/researchprojects/current-researchprojects/nuclearphysics.

York Plasma Institute

The York Plasma Institute (YPI) is a collaboration between the University of York and EPSRC that provides a stimulating training and research environment across three exciting areas of plasma science: laser plasma interactions, low temperature plasmas and magnetic confinement fusion. We offer MSc and PhD research programmes in all of these areas, as well as a taught MSc in Fusion Energy. We lead the EPSRC Centre for Doctoral Training in the Science of Technology of Fusion Energy.

Our laser–plasma interaction programme offers research degrees across a wide range of topics, from studies of ultra–high irradiance experiments where gamma rays produce electron–positron pairs, through spectroscopic investigations of the mixing of ablative shell and deuterium–tritium fuel at the US National Ignition Facility, to investigations of extreme ultra– violet laser ablation of solids. We offer research projects across the full spectrum, from theory/computing to experiments with large laser systems.

Low temperature plasma research bridges physics, chemistry, biology and the life sciences with applications in nano-fabrication (together with Intel); electrical thrusters for space propulsion technologies; thin film deposition for material sciences; and bio–medical applications including plasma medicine for cancer treatment. We develop and employ modern optical diagnostic techniques, in particular non-linear laser spectroscopy, as well as advanced multi–scale numerical simulations. Our state–of–the–art YPI laboratories provide world–leading experimental facilities.

Magnetic confinement fusion research at YPI is currently focused on the tokamak, addressing issues for ITER and fusion energy. Our research spans theory and computing projects on the world’s largest supercomputers, through hands–on experimental facilities in the YPI laboratories, to international tokamak facilities. Research interests include handling the exhaust power from a tokamak plasma; plasma turbulence and instabilities that limit the fusion power in a tokamak like ITER; and developing advanced instrumentation for making measurements in the hostile fusion plasma environment.

Our web pages provide more details on specific projects: www.york.ac.uk/physics/postgraduate/researchprojects/current-research-projects/plasmaphysics.

EPSRC Centre for Doctoral Training in the Science and Technology of Fusion Energy

Led by York, the Fusion CDT is a collaboration between five of the UK’s top universities – Durham, Liverpool, Manchester, Oxford and York – and world–class research institutes, including the Culham Centre for Fusion Energy, the Central Laser Facility, the National Nuclear Laboratory, AWE, the National Ignition Facility, ITER and Fusion for Energy, as well as industry partners. This four–year PhD programme integrates a substantial research project with a short taught programme, in a range of inertial and magnetic fusion disciplines spanning materials and plasma physics. The combination of world–leading experts, international facilities and funding to develop collaborations around the world creates an outstanding training environment for the next generation of fusion scientists – the generation who will exploit ITER, NIF and other international experiments to make fusion energy a reality.

The Fusion CDT funds about 15 studentships each year, covering tuition fees, stipend, international conferences/summer schools, international secondment and a collaborative project. Visit www.fusion-cdt.ac.uk for more information.

Available funding

Eligible UK and EU applicants will be considered for EPSRC/STFC and University studentships. Studentships normally require a minimum of an upper second–class degree, or equivalent. MSc students must arrange their own funding. PhD and MSc students from outside the EU have to provide full funding for fees and living costs. Applications for our departmental scholarships are also open to offer holders. Those resident in, or connected to, the UK may be eligible for EPSRC/STFC studentships and Centre for Doctoral Training funded places. For further information: www.york.ac.uk/physics/postgraduate/funding.
Staff list

Professor and Head of Department
Sarah Thompson, PhD (Durham)  Magnetic materials: growth, structure and spectroscopy of magnetic nanostructures

Professors
Andrei Andreiev, PhD (Dubna, Russia)  Nuclear physics
Mohamed Babiker, PhD (Sussex)  Low dimensional semiconductors; quantum and atom optics theory
Mike Bentley, PhD (Liverpool)  Nuclear physics: nuclear structure
Ed Boyes, PhD (Cambridge)  Nanophysics of catalysts; single atom resolution in-situ electron microscopy methods and instrumentation
Roy Chantrell, PhD (Wales)  Theoretical studies of magnetic materials
Irene D’Amico, PhD (Colombia)  Condensed matter theory: quantum computing, spintronics
Jacek Dobaczewski, PhD (Warsaw)  Nuclear structure; exotic nuclei; collective phenomena
Brian Fulton, PhD (Bham)  Nuclear physics; nuclear astrophysics
Pratibha Gai, PhD (Cambridge)  Surface science: nanomaterials; catalysis; dynamic atomic processes; in-situ microscopy
Timo Gans, PhD (Essen)  Low-temperature plasmas: diagnostics, numerical simulations, technological applications
Kieran Gibson, PhD (Manchester)  Experimental magnetic confinement fusion
Bex Godby, PhD (Cambridge)  Theory and simulation of electrons in matter using many-body techniques
David Jenkins, DPhil (York)  Nuclear structure/astrophysics; nuclear data (fission and fusion reactors); detector development for societal applications
Thomas F Krauss, PhD (Glasgow)  Nanophotonics
Mark Leake, PhD (London)  Single-molecule cellular biophysics
Bruce Lipschultz, PhD (Wisconsin)  Plasma physics of low temperature; moderate density plasmas at edge of fusion energy-related devices
Kevin O’Grady, PhD (Wales)  Magnetic materials: magnetisation reversal in materials
Tim Spiller, PhD (Durham)  Quantum technologies: communications, metrology and computing
Greg Tallents, PhD (ANU)  Laser-induced plasmas; laser interaction with matter; high energy density materials
Bob Wadsworth, PhD (Liverpool)  Nuclear physics: structure of exotic nuclei far from stability
Howard Wilson, PhD (Cambridge)  Plasma physics: magnetic confinement fusion
Nigel Woolsey, PhD (Oxford)  Laser plasmas; laboratory astrophysics; fusion; fast ignition; X-ray spectroscopy and scattering
Jun Yuan, PhD (Cambridge)  Nanophysics: nanomaterials; advanced microscopy; atomically resolved spectroscopy

Readers
Roland Kröger, PhD (Hamburg)  Electron microscopy; defects and interfaces in semiconductors and metals; nanostructures
Alison Laird, PhD (Edinburgh)  Nuclear astrophysics
Matthew Probert, PhD (Birmingham)  Condensed matter theory: first principles computer simulation of materials
Steve Tear, DPhil (York)  Surface physics: electronic and structural properties of metal–semiconductor surfaces

Senior Lecturers
Ben Budson, DPhil (Oxford)  Plasma physics: explosive instabilities and turbulence in tokamaks
Robert Greenall, PhD (Keele)  Computer simulation of macromolecular dynamics, particularly molecular dynamics of DNA
John Pasley, PhD (Imperial College London)  Plasma physics
Roddy Vann, PhD (Warwick)  Theory of magnetically confined fusion plasmas

Lecturers
Charles Barton, PhD (Clark)  Nuclear physics
Stuart Cavill, PhD (Nottingham)  Condensed matter physics: hybrid spintronics
James Dedrick, PhD (Australian National University)  Low-temperature plasma physics and applications: electric propulsion
Christian Diget, PhD (Aarhus)  Nuclear physics
Yvette Hancock, PhD (Monash)  Theoretical design of nanoscale devices and their application in future technologies
Andrew Higginsbotham, DPhil (Oxford)  High energy density and high pressure physics; atomistic simulation; X-ray diffraction
Vlado Lazarov, PhD (Wisconsin)  Electron microscopy and magnetic materials
Keith McKenna, PhD (Sheffield)  Condensed matter theory; properties of metal oxide materials
Christopher Murphy, PhD (Imperial College London)  Experimental laser plasma physics; extreme fields; plasma acceleration
Deborah O’Connell, PhD (DCU, Ireland)  Fundamentals of low-temperature plasma physics and their applications, including plasma medicine
Andrew Pratt, PhD (York)  Ultra-high vacuum growth and characterisation of functional nanomaterials; electron spectroscopy techniques; molecular spintronics and functionalised nanoparticles
Chris Ridgers, PhD (Imperial College London)  Plasma physics
Gonzalo Vallejo Fernandez, PhD (York)  Condensed matter physics; thin film and fine particle magnetism
Erik Wagenaars, PhD (Eindhoven)  Low-temperature plasma experiments; optical plasma diagnostic development
Laurence Wilson, PhD (Edinburgh)  High-speed video and high-throughput image analysis techniques
Ignacio Wilson–Rae, PhD (UC Santa Barbara)  Quantum photonics, nanomechanics and optomechanics
Jing Wu, PhD (Exeter)  Magnetic materials: dynamic magnetisation mapping of advanced materials and devices

Teaching Fellows
Emily Brunsden, PhD (Canterbury, New Zealand)  Astronomy and astrophysics: high-resolution spectroscopy of stars
Phil Lightfoot, PhD (Bristol)  Particle astrophysics
Martin Smalley, DPhil (Oxford)  Clay swelling; colloid stability; neutron scattering
The Politics graduate school is one of the largest and most international schools in the UK. You will join an academic community that places a high value on the relationship between excellence in research and teaching, and on intellectual diversity.

The Department of Politics at the University of York is one of the leading centres for research and teaching in politics in the UK. Our staff are at the cutting edge of their research fields, and are committed both to research of the highest standards and to applying their knowledge to real-world problems. The Department provides an intellectually diverse, international and friendly environment in which the next generation of experts and researchers in politics and public policy is trained.

Our teaching and research cover all the major sub-disciplines of politics including political theory; comparative politics and public policy; political economy and conflict; security and development. We have regional expertise in British and European politics, Latin America, southern Africa, the Middle East and Central and South Asia. There are specialist centres in toleration, environment and applied human rights.

The Department of Politics at York was ranked eighth in the UK in the 2014 Research Excellence Framework. The results confirmed York’s standing as a centre of world-leading and internationally excellent research, with major global and national impact. The Department’s research outputs were ranked seventh overall and 4* (world-leading) research outputs were ranked ninth. This places the Department firmly in the top ten leading research departments in the UK.

As a postgraduate student in the Department of Politics, you will benefit from being taught by leading scholars in the field, and from being part of a large, diverse and international student community. There are plenty of opportunities for our students to develop their intellectual skills outside classes: by presenting their research at workshops, by participating in study groups and through the academic study skills sessions run in the Autumn Term. Students for whom English is not their first language also benefit from in-sessional English language classes taught by the Centre for English Language Teaching. Our students go on to a range of professional careers, including the private sector, academic posts in leading universities, international NGOs and governments around the world.

The Department of Politics provides a range of services to enhance the skills, employability and careers of our postgraduates. A range of important transferable skills are embedded in our curriculum. Our students go on to careers in international organisations, the media, law, the civil service, politics, journalism and business.
Programmes overview
The Department of Politics at York runs an extensive programme of Masters degrees in the main areas of the discipline. The structure of these degrees usually comprises a dissertation and six taught modules. All our programmes can be studied part-time as well as full-time.

Your background
The main criterion for admission to an MA degree in the Department of Politics is a 2:1 BA degree or international equivalent in a related discipline. However, exceptions are sometimes made for students with different backgrounds, in which case assessment is by written work and additional references.

For the MA in Political Theory, students normally have a background in political theory; however, applications from those with a different academic background will be considered through assessment of written work germane to the broad field of political theory.

For the MA in Political and Legal Theory: Toleration, students normally have a background in political or legal theory; however, applications from those with a different academic background will be considered through assessment of written work germane to the broad field of political or legal theory.

MA in Applied Human Rights
This MA programme, run by the Centre for Applied Human Rights, is a unique programme that explores how human rights can advance social justice in law, policy and social activism. For further information please see the entry for the Centre for Applied Human Rights on page 87.

MA in Conflict, Governance and Development
This degree looks at contemporary debates in international development and the challenges and opportunities confronting developing countries and their citizens. The programme combines a strong focus on the major theories of development with empirical analysis of the experiences of particular countries and regions.

You will complete two core modules: Theories and Policies of Development Governance and Conflict and Development. You will also choose four optional modules to allow you to develop your particular research interests. In the Summer Term and over the vacation you will consolidate these interests through your work on a dissertation project of your choice.

This MA programme is an excellent pathway to careers in the development/NGO sector, a wide range of private and public sector organisations, and for further academic study in development, political science and international relations. Recent graduates from this degree work for development charities including the International Committee of the Red Cross.

MA in Contemporary History and International Politics
This degree provides a foundation for graduate-level research into contemporary history (c1900 to the present) and international politics. Please see page 81 for further details.

MA in International Political Economy: Critical Theories, Issues and Conflicts
This degree focuses in analytical terms on the changing relationship between the national state and the international political economy. It introduces the theoretical concepts and ideas that underpin this analysis, including the contributions by Adam Smith, Karl Marx and Friedrich Hayek.

You will complete two core modules: Contemporary Issues in International Political Economy and Critical Theories of International Political Economy. You will also choose four optional modules to allow you to develop your particular research interests. In the Summer Term and over the vacation you will consolidate these interests through your work on a dissertation project of your choice.

This MA programme is an excellent pathway to careers in a wide range of private and public sector organisations, and for further academic study in international political economy, international relations and political science. Recent graduates from our political theory degrees have become university lecturers, parliamentary assistants, librarians and television producers.

MA in International Relations
This degree combines advanced study of the core theoretical questions in international relations with a problem-centred critical engagement with practice and policy. You will develop a strong foundation in the theoretical debates with an understanding of how these resonate in concrete contexts.

You will complete two core modules: Themes and Theories in International Relations and New Security Challenges. You will also choose four optional modules to allow you to develop your particular research interests. In the Summer Term and over the vacation you will consolidate these interests through your work on a dissertation project of your choice.

This MA programme is an excellent pathway to careers in a wide range of private and public sector organisations, and for further academic study in international relations and political science. Recent graduates from this degree work for leading universities and as policy advisers in various countries around the world.

MA in Political Theory
This degree allows you to pursue interests in a wide range of topics in politics, philosophy and intellectual history. It provides you with the opportunity to get to grips with some of the central and enduring questions of political theory.

You will complete one core module: Approaches to Political Theory. You will also choose five optional modules, which allow you to study issues connected with toleration, continental political theory, legal theory and political integrity. In the Summer Term and over the vacation you will consolidate your interests through your work on a dissertation project of your choice.

This MA programme is an excellent pathway to careers in a wide range of private and public sector organisations, and for further academic study in political theory, international relations and political science. Recent graduates from our political theory degrees have become university lecturers, parliamentary assistants, librarians and television producers.

MA in Political Research
The MA in Political Research is a one-year degree that has been recognised by the...
Having done my undergraduate degree here, I wanted to be at York for my PhD. The staff are incredibly friendly and approachable, and this is invaluable at doctoral level. When research inevitably takes you down an unexpected avenue or throws up big questions it’s great to know you can knock on anyone’s door for a chat! Staff attend postgraduate events and seminars and give great feedback and support.”

FAY, PhD IN POLITICS
and Public Management and Delivery.
On both pathways you will also choose two optional modules to allow you to develop your particular research interests. In the Summer Term you will consolidate these interests through your work on a dissertation project of your choice.

This MA programme is an outstanding resource for developing your career in a wide range of private and public sector organisations. It is also an excellent pathway to further study, in public administration and political science. Recent graduates from this degree work as teachers, senior policy analysts and business development professionals.

PhD in Politics
The PhD programme allows students to explore an area of academic interest in substantial detail and prepares you for an advanced research or academic career. The programme is undertaken over three years. Throughout this time your supervisor(s) will guide you through the process of clarifying and completing your doctoral thesis. In addition, during the first year a range of subject-specific research training modules are available to support you through the exploratory phase.

Our PhD programme is recognised by both the Economic and Social Research Council (ESRC) and the Arts and Humanities Research Council (AHRC) through the award of studentships.

We also offer a joint degree MPhil/PhD in Environment and Politics.

Available funding
A variety of funding options are available to students. Typically these include departmental fee waivers for MA and PhD students, discounts for University of York alumni wishing to undertake one of our MA programmes and Research Council funding for PhD students. For information on the funding available visit www.york.ac.uk/politics.

Staff list

Professor and Head of Department

Martin Smith, PhD (Essex) Governance and accountability; the rise of the moral state; public sector retrenchment

Professors

Werner Bonefeld, Dip Pol, PhD (Edinburgh) Global political economy; political sociology; Marxism
Neil Carter, PhD (Bath) Environmental politics and policy; public policy; British politics
Allison Drew, PhD (UCLA) Political development; African politics; political movements; gender
Matthew Festenstein, PhD (Cambridge) Contemporary political theory; democracy; pragmatism
Paul Gready, PhD (London) Transitional justice; human rights; African politics
Tony Heron, PhD (Sheffield) International trade; international political economy; small states
Lucia Quaglia, DPhil (Sussex) Economic governance in the European Union; comparative politics; public policy

Reader

Louise Haagh, DPhil (Oxford) Development politics; Latin American politics; economic citizenship

Senior Lecturers

Rob Aitken, PhD (Leiden) Ethnicity and conflict; clientelism; political anthropology
Jim Buller, PhD (Sheffield) British politics and public policy; Europeanisation; policy transfer
Nina Caspersen, PhD (LSE) Unrecognised states; democratisation; conflict resolution
Martin O’Neill, PhD (Harvard) Contemporary political philosophy; theories of justice
Simon Parker, PhD (Cambridge) Comparative European politics; urban politics; Italian politics
Tim Stanton, PhD (Leicester) History of political thought; philosophy of John Locke; enemies of liberalism

Lecturers

Monica Brito-Viera, PhD (Cambridge) History of political thought; contemporary political theory; intellectual history
Liam Clegg, PhD (Birmingham) International political economy; international organisations; IMF; World Bank
Alex Hall, PhD (Queen’s Belfast) International security; border control; anthropology and international relations
Ignacio Jurado, DPhil (Oxford) Comparative political economy; electoral behaviour; politics of redistribution; electoral geography
Sandra Leon, PhD (Madrid) Decentralised institutions; decentralisation and democratic accountability
Nicole Lindstrom, PhD (Syracuse) Global governance; European integration; Central Europe
Mihaela Miha, PhD (Toronto) Political theory; political science; law
Audra Mitchell, PhD (Queen’s Belfast) Violence and international responses; political theory; Northern Ireland; the Balkans
João Nunes, PhD (Aberystwyth) Politics of health; security studies; Brazilian foreign policy; politics of food and food security
Alejandro Peña, PhD (City University London) Latin American politics; transnational governance; social movements; international relations theory

Nick Ritchie, PhD (Bradford) International security; nuclear weapons; nuclear disarmament; US foreign policy
Claire Smith, PhD (London) Post-war reconstruction; Indonesian politics
Sofia Vasilopoulou, PhD (LSE) Comparative politics; party politics; European Union; euroscepticism and the radical right
Adam White, PhD (Sheffield) Governance of security; public policy; British politics

Emeritus and Honorary Staff

Haleh Afshar, PhD (Cambridge) Islam; economics and development; gender
David Howell, PhD (Manchester) British political history; comparative labour movements
Susan Mendus, CBE, MPhil (Oxford) Contemporary and historical problems in political philosophy
Politics, Economics and Philosophy

Programmes offered

MA in Philosophy, Politics and Economics
MA in PPE: Economics and Development
MA in PPE: Economics and Philosophy
MA in PPE: Economics and Politics
MA in PPE: Philosophy and Public Affairs
MA in PPE: Political Economy
MA in PPE: Politics and Development
MA in PPE: Political Research
MPhil/PhD

The School of Politics, Economics and Philosophy (PEP) provides world-class opportunities for interdisciplinary study and research in the area of PPE. You can choose a balanced programme across all three subjects or can focus on specific areas.

The School is a successful collaboration between the Departments of Politics, Economics and Related Studies and Philosophy. We are the only institution to offer both Masters and research degrees in PPE.

These MA programmes have extended an already excellent tradition of integrated, interdisciplinary teaching in PPE at York to postgraduate level. At the centre of all our MA courses is a core interdisciplinary module, The PPE of Social Choice, which is jointly taught by staff from the three departments. Students and academics are provided with a forum for the exchange of ideas across the three PPE disciplines through the organisation of seminars, lectures and conferences. In addition, the School’s vibrant, dynamic and well-organised student body – the Club of PEP – offers a wide range of activities, has its own journal and contributes to the distinct identity of the School.

York is a research-intensive university and in the 2014 Research Excellence Framework assessment, 80 per cent of research activity in the Department of Politics was designated as ‘world-leading’ or ‘internationally excellent’; the Department of Economics was ranked eighth in the UK for ‘research power’ and impact on wider society; while in the Department of Philosophy, 96 per cent of research activity was designated as ‘internationally recognised’.

Your future

Students on the Masters programmes in PPE have very diverse interests and pursue a wide range of career options open to them according to the pathway in the programme they choose. These range from careers in accounting, the civil service, finance, international development, journalism, law, politics and research. The international dimension of the programme allows students to pursue job opportunities both in the UK and abroad.
Programmes overview
The School of PEP at York offers a variety of interdisciplinary postgraduate programmes to rival any in the world. Our staff and students are committed to ensuring a genuine interdisciplinary experience for all PEP postgraduates, in the belief that the most interesting questions seldom respect disciplinary boundaries.
Programmes available include a number of one-year taught Masters in Philosophy, Politics and Economics (PPE), providing an interdisciplinary approach, and research studies at doctoral level. You can opt for either a balanced education across the three PPE disciplines or choose to focus on particular areas. Our programmes are thus constructed and ‘streamed’ with a view to allowing you to specialise if you so wish. The resulting range of choice in terms of programmes and option modules is remarkable for a graduate PPE programme. Nonetheless, each course of study includes, and is unified by, an interdisciplinary module in Social Choice which extends the York tradition of interdisciplinary PPE teaching to the graduate level.

In the Economics stream, programmes allow you to specialise in the fields of economics and development, economics and philosophy, and economics and politics. Students in this stream also receive research training in economics. In the Politics stream, you can focus on the politics of development, political economy and political research while being able to acquire research training in politics. Students in the Philosophy stream can focus on philosophical topics while also developing research skills.

Depending on the programme you choose, you are prepared for a wide range of careers including in international organisations, international development, finance, politics and research. We make space for and actively promote interdisciplinary research. We are unique in offering MPhil and PhD degrees in PPE. Programme content is regularly reviewed so the details below could change; always check on the web for the most up-to-date information.

Your background
For the MAs and Diplomas in PPE, you are expected to have a 2:1 or equivalent degree. Although many of our students come from social science backgrounds, others have come from the arts, mathematics and natural sciences. All we ask, other than for applicants to the Economics stream, is that you are enthusiastic and committed to investigating the world from different perspectives. Because of the mathematical requirements of the Economics stream, applicants with little or no previous knowledge of Economics are in general expected to attend a Summer Session in Economics (details are available each year from the Department of Economics website). Students applying for the other streams do not need any background in Economics or Mathematics.

Just as our students come from a variety of backgrounds, they go on to a variety of careers in business, industry and public bodies.

MA in Philosophy, Politics and Economics
This programme offers a balanced and integrated education across the PPE disciplines. It is constructed around an interdisciplinary module on Social Decision Making with contributions from all three of York’s internationally excellent PPE departments. The programme provides you with a foundation in economics and research skills and offers a wide range of philosophy and politics option modules.

Core modules include The PPE of Social Choice and Research Skills. A further 90 credits’ worth of optional modules are chosen from the contributing disciplines. A 12,000-word dissertation enables you to develop your skills at research and to focus on an area that interests you.

MA in PPE: Economics and Development
This programme offers a rounded and integrated PPE education suitable for those who wish to focus on economics and development. Unlike MSc programmes in development economics, it allows you to explore both the economic and political dimensions of international development, as well as links between social choice and development economics. The programme also provides essential research training in economics for further doctoral study.

Core modules cover the following topics: Development Economics, The PPE of Social Choice, Applied Microeconomics and Research Skills. You can choose a further 60 credits of option modules from Economics or Politics. A dissertation of about 12,000 words is required.

MA in PPE: Economics and Philosophy
This programme allows you to explore central connections between normative economics and ethics which deeply influenced the development of modern economics and moral philosophy. These connections can be found in the classic texts in economics and philosophy, in Adam Smith – sometimes referred to as the ‘father’ of economics, but who was also a Professor of Logic as well as Moral Philosophy – as well as in the works of Karl Marx and John Stuart Mill. They can also be found in the recent flowering of research at the intersection of economics and philosophy. The programme allows you to study the links between economics and philosophy at an advanced level.

Core modules cover The PPE of Social Choice, Applied Microeconomics and Research Skills. You can choose a further 80 credits from options in Economics or Philosophy. A dissertation of some 12,000 words is also required.

MA in PPE: Economics and Politics
The interconnections between economics and politics take centre stage in this programme.

“The School of PEP brings together a wide range of modules from different departments in a well-structured course with interdisciplinary research insights for postgraduate students. I have particularly enjoyed our seminars on social choice, which were highly stimulating and delivered by lecturers from three departments working together. As a student representative on the Graduate Board, I’ve seen how helpful and enthusiastic the staff are about implementing new ideas.”

VITHUL, MA IN PHILOSOPHY, POLITICS AND ECONOMICS
Training in the department to which you are allocated is tailored to suit a wide range of students with interests in economics and politics as well as the relation between them. The wide range of options allows you to look at certain areas in depth. It also provides a foundation for research in economics.

Core modules cover the PPE of Social Choice, Applied Microeconomics and Research Skills. You can choose a further 80 credits of options in either Economics or Politics. A dissertation of about 12,000 words is required.

**MA in PPE: Philosophy and Public Affairs**

Philosophical issues are deeply relevant in many areas of public life and often arise in public discussion. They include issues about ethics, economics and the law, as well as politics. This programme covers topics in ethics, political philosophy and social choice, and provides an understanding of economics and research training. It allows you to study a range of options at the intersection of philosophy and public affairs. It equips you for a range of careers in research and public life.

Core modules cover the following areas: The PPE of Social Choice and Research Skills. A dissertation of about 12,000 words is also required. You can choose a further 90 credits of options in Economics, Politics or Philosophy.

**MA in PPE: Political Economy**

Before the emergence of economics and politics as distinct disciplines, ‘political economy’ was a discipline in itself. Only later did economics emerge as a distinct subject. While political economy was unfashionable for some years, there has been a considerable expansion of research across the three PPE disciplines in recent years so that it is now one of the most exciting areas of study and research. This programme suits a wide range of students with interests in politics and economics.

Core modules cover the following areas: The PPE of Social Choice and Research Skills. Options totalling 90 credits can be chosen from a large range in Economics or Politics. A dissertation of about 12,000 words is also required.

**MA in PPE: Political Research**

This programme allows you to acquire training you will need for political research within an interdisciplinary programme in Philosophy, Politics and Economics. This programme is specifically for students who need appropriate quantitative or qualitative research skills. These skills are required for you to be eligible for Research Council–funded studentships in Politics and the Social Sciences. By choosing various optional modules, you can nonetheless specialise in specific areas in politics and development studies, such as the politics of development or political economy.

Core modules cover The PPE of Social Choice, Research Skills, Political Research and Analysis. In addition you can choose 70 credits’ worth of option modules. A dissertation of around 12,000 words is also required.

**Diplomas in PPE**

For each of the Masters programmes described above, a Diploma is available for students who complete the taught element of the programme, but do not go on to do the dissertation.

**MPhil/PhD**

The School offers a unique research degree programme made possible by the collaboration between the three PPE departments. The programme allows you to pursue research at the interdisciplinary intersection of the three PPE disciplines. It is split into three streams (Economics, Philosophy and Politics) with students in each stream receiving core research training in the relevant subject. You are affiliated with the department of your main supervisor, and have access to opportunities for teaching and support from that department. Aside from receiving training in the department to which you are affiliated, you can also take modules, and, if appropriate, have a supervisor, in one of the other collaborating departments. Whether or not you do depends on your individual training needs and the interdisciplinary focus of your research project. The programme is flexible and so also allows you to pursue interdisciplinary projects where all training is provided by one of the three departments.

Details of the programme structure and of the modules taken by students in different streams to support their research are given on the web.

**Your background**

To be admitted to the MPhil/PhD directly, you need a strong academic background – usually at least a 2:1 in your first degree and a good Masters–level qualification in an appropriate discipline.

“...I was immediately impressed by how PEP integrated three different departments into a truly interdisciplinary degree. Of all the modules available, I found Qualitative Research in Politics and Quantitative Methods and Data Analysis to be the most helpful as I prepared for my research project. The PEP Club and research student coffee meetings provide a welcoming atmosphere for the exchange of ideas. Being at York has prepared me for my future career both academically and professionally.”

PHOHNTHIP, PhD in PHILOSOPHY, POLITICS AND ECONOMICS
Available funding

UK/EU students applying to the School are eligible for Research Council studentships which are available in the collaborating departments. Overseas students can apply for University scholarships. Further information on funding is available on our website www.york.ac.uk/study/postgraduate/fees-funding/scholarships.

Staff in the collaborating departments have research interests and specialise in some of the core areas of PPE research, including economics and philosophy, ethics and moral philosophy, political economy, political philosophy and social choice. This, combined with the collaborative role of the School, gives York a strong and rich research culture in the area of PPE, spread across the three collaborating departments. The specialist interests of relevant staff extend more widely into the following areas: democracy; development studies; ethnicity, identity, multiculturalism and race relations; game theory; gender and feminism; governance; history of political thought; 19th- and 20th-century philosophy; philosophy of language; productivity and economic growth; rationality, decision theory and experimental economics; utilitarianism; and welfare and poverty. Staff changes mean that you should always consult the web pages for the latest information.

The Post-war Reconstruction and Development Unit (PRDU) is a leading international centre for research, teaching and expert advisory services on peace, conflict, reconstruction, international development, humanitarian affairs, civil–military co-operation, state building, governance and related disciplines.

The PRDU works to bridge the gap between academics and practitioners working in conflict and disaster environments to build capacities, shape policies and improve recovery programmes. The PRDU has a multidisciplinary team of core staff and more than two dozen associates who teach and research across fields such as politics, development, law, human rights, economics, gender studies, education, health studies and anthropology.

In addition to teaching, PRDU staff members shape policies and improve reconstruction programmes through the provision of training in the UK and abroad, through applied research and through the provision of advisory services to more than 20 major international organisations such as the United Nations, the World Bank, CARE International and the UK Department for International Development.

Research

The PRDU is engaged in numerous research projects around the world, which feed into its teaching and offer opportunities for PhD and MA students. The Unit’s research work focuses on four themes:

- Understanding peace and conflict, including peacebuilding; conflict resolution, prevention and transformation
- Human security, including topics such as disaster management; security sector reform; reconstruction; global policymaking
- Governance and institution building, including state-building; formal and informal institutional development; public administration reform; decentralisation
- Research and evaluation methodologies in conflict-affected contexts, including strategic and programmatic planning; needs assessment; context and impact analysis.

Recent research includes a World Bank-funded evaluation of the largest development programme in Afghanistan.

PRDU staff members emphasise the importance of fostering links between academia and practice by strategic dissemination of research findings; training and academic activities, including the annual summer school; and the Afghanistan strategic partnership.

Your future

Many PRDU students go on to work in the humanitarian field, UN and aid agencies, national and international NGOs, the defence sector and government ministries. The placement component of the programme is an important way to gain practical experience of working in the field and to network with potential employers.
Programmes overview

By 2015, more than 39 PhD and 435 MA students in Post-war Recovery Studies will have graduated from the PRDU. Many of these will go on to leading roles in academia and organisations operating in conflict-affected countries.

MA in Post-war Recovery Studies

It is imperative that emergencies are managed by professionals specialising in relief, rehabilitation, reconstruction, development and peacebuilding. The PRDU’s flagship MA programme in Post-war Recovery Studies draws upon the experience of the Unit’s staff and experts from the University of York and throughout the world. The programme is unique in its field globally as it provides both classroom and in-field training on the core issues of post-war recovery through its threefold structure:

- in-class lectures and seminars – taught by world-renowned academics, policymakers and practitioners
- field trip to a post-war region – led by field-experienced staff, students gain first-hand, ground-level, understanding of reconstruction and recovery in the aftermath of war. They develop the methodological, logistical and ethical skills and sensibilities required for any work in conflict-affected settings
- work placement – all students undertake a 6–8-week work placement. They are based within an international or national organisation working on a particular aspect of post-war recovery, humanitarian action or development in a war-affected context (or, in special circumstances, in the organisation’s HQ).

The MA programme carries a total of 180 credits. This is a one-year full-time programme, but can also be taken as a two-year part-time option. Each taught module is open to outside professionals as a short course.

Students take two taught modules in Terms 1 and 2 (20 credits each). Term 3 is dedicated to the work placement and dissertation.

- Module I: Conflict and Responses to Conflict
  This is an introduction to conflict, from root causes to the cessation of hostilities. It examines principles of international human rights and humanitarian law, investigating international interventions in recent conflicts.
- Module II: Practical Skills in Post-War Recovery
  This module addresses current debates on post-war recovery, including human rights and humanitarian law, investigating international interventions in recent conflicts.

The MIHA programme provides an academic setting for professionals:

- to develop how they understand and respond to humanitarian needs in complex operational contexts such as violent conflict, natural hazards and political crises
- to examine and analyse contemporary issues, challenges and dilemmas using social, political, cultural, economic and environmental perspectives, lived experiences of affected communities and changing policy debates, as well as the technical approaches of the main humanitarian sectors
- to gain advanced academic and policy skills, and learn how to use theory to maintain good practice.

With the innovative programme structure and two-year duration of the MIHA, students will be able to access the in-depth knowledge base at the PRDU through a

“...The MA focuses on the theoretical and practical sides of post-war recovery, including the impact of conflict, casualty rates and how political moves help to determine outcomes. In the module on Perspectives of Post-war Recovery we discussed state-building, nation-building, and stabilisation and it gave me a much better understanding of the mutual influence of national and international policy-making on war zones.”

RASHA, MA IN POST-WAR RECOVERY STUDIES
unique learning and teaching experience while gaining a globally recognised postgraduate qualification. Students will benefit from the wide variety of learning tools available throughout the course. The dynamic range of learning tools includes:

- participatory learning and teaching methodologies
- experiential and problem-solving approaches
- interactive online discussions
- collaborative exercises and case study materials
- webinars for each module with leading academic, policy or practice experts
- bespoke study materials
- private study exercises
- access to an extensive online library at the University of York.

This MSc is delivered over two years with five core modules and two optional modules:

- Examining Humanitarianism (Core)
- Protection and Assistance in International Humanitarian Law (Core)
- Humanitarian Response: Food and Nutrition, Shelter, Health and WASH (Core)
- Research Methods in Humanitarian Affairs (Core)
- Dissertation (Core)
- Education in Emergencies (Optional)
- Evaluating Humanitarian Programmes (Optional)
- Communities in Humanitarian Affairs (Optional)

- Disasters in Complex Political Emergencies (Optional).

These provide the foundational knowledge to examine the past, present and future of humanitarian affairs within an academic, policy and practice framework. The Research Methods module trains students on ethical and sound research in humanitarian affairs. These modules are positioned to maximise the learning of MIHA students as shaped by their professional needs and aspirations.

Students will pursue an independent study project in the form of a 15,000-word dissertation, with support from the PRDU faculty and associates, addressing a specialised area within the field of humanitarian affairs.

### Your background

Candidates most hold at least an upper second-class (2:1) undergraduate degree. Candidates without an undergraduate degree will be considered on a case-by-case basis where they possess extensive professional experience (supported by references) and can demonstrate the necessary academic ability.

### MPhil/PhD in Post-war Recovery Studies

With an international reputation for research excellence and methodological and theoretical innovation, the Unit is an ideal place for MPhil and PhD research in a wide range of subjects related to humanitarian affairs, post–conflict recovery, peacebuilding, fragile states, security sector reform and conflict transformation. At present the PRDU is home to more than a dozen PhD students, the majority of them from developing and conflict–affected countries. Many of our home students are fully funded by the UK’s Economic and Social Research Council (ESRC).

The MPhil and PhD are awarded on the basis of a thesis after a period of two and three years’ study respectively. Students accepted for research will normally be expected to have a good first degree as well as an MA degree. Applications to work for the MPhil and PhD will be welcomed in the research areas outlined on page 138.

Both the MPhil and the PhD may be studied part–time, the period of study being four and six years respectively. All MPhil and PhD students are required to complete the PRDU doctoral training programme.

### Available funding

For detailed information about potential funding opportunities, please see our website [www.york.ac.uk/prdu/pg-funding](http://www.york.ac.uk/prdu/pg-funding).

---

### Staff list

#### Professor and Chairman of Unit

**Sultan Barakat**, PhD (York)  
Reconstruction of war–torn societies; impact assessment of relief and development programmes

#### Executive Director

**Kenneth Bush**, PhD (Cornell)  
Conflict evaluation; peacebuilding; ethnicised conflict; methodology

#### Teaching Faculty

- **Jacob Eriksson**, PhD (SOAS)  
  Israeli–Palestinian conflict and conflict resolution; Middle Eastern politics and security
- **Janaka Jayawickrama**, PhD (Northumbria)  
  Disaster and conflict recovery and reconstruction; humanitarian assistance; sustainable development
- **Jo Rose**, PhD (Northumbria)  
  Complex political emergencies including Liberia, Somalia and Sudan; policy and practice in disasters, conflicts and uneven development
- **Tom Waldman**, PhD (Warwick)  
  Post–war reconstruction; security sector reform; Afghanistan

#### Research Fellows

- **Irene Costantini**, MSc (SOAS)  
  State–building intervention; transformation and theory; Middle East politics with special focus on Iraq and Libya
- **Sansom Milton**, PhD (York)  
  Higher education in post–conflict societies; conflict mediation; theories of post–war reconstruction and state–building
The Department of Psychology at York is one of the top Psychology departments in the country. You will join a department with diverse research interests, outstanding facilities, a strong record in both basic and applied research and excellent teaching standards.

The Department has repeatedly been ranked among the best for research. In the 2014 Research Excellence Framework assessment, the Department was ranked fourth for overall performance and second for research outputs.

The Department has been awarded the Athena SWAN Silver award for commitment to women in science.

Current research work can be summarised in terms of the following groupings and topic areas that departmental members excel in: (i) perception and attention; (ii) cognitive processes in adults and children (with special reference to reading, language and memory); (iii) comparative psychology; (iv) cognitive development; (v) cognitive neuroscience; and (vi) social and personality psychology. The Department also has a strong commitment to exploring applied aspects of basic research in a bid to provide a firm basis for practice: this is particularly evident in the research that has direct educational and medical applications and the work of the Applied Forensic Psychology team.

The Department occupies modern purpose-built accommodation that is furnished with extensive state-of-the-art research equipment. Some of the more specialised research facilities include a sleep laboratory; a hearing and speech laboratory with a large-scale sound-attenuating environment; computer-controlled visual and auditory displays for work on perception, attention, memory and language; an eye movement laboratory; and a video laboratory with computer facilities for video-editing and behavioural analyses.

The Department is integrated with the York Neuroimaging Centre (YNiC) (see page 13). This has proved essential in supporting cutting-edge developments in cognitive neuroscience. Our researchers and students have access to fMRI and MEG brain scanners, and to TMS and EEG laboratories. In addition, the Department maintains excellent contacts with local schools and hospitals for work in developmental psychology and neuropsychology. The forensic team maintains very close links with the Home Office, the Prison and Probation Services, the Ministry of Justice and secure forensic mental health service providers.
Programmes overview
The strengths in the Department lie with experimental psychology; more broadly this translates into the view that all our programmes are based on a firm scientific foundation. The whole of the Masters-level programme is modular-based with certain core modules (for instance, those concerning statistics and transferable skills) forming obligatory components for all students; certain other modules are specifically designed to meet particular course requirements.

MSc in Cognitive Neuroscience
The MSc in Cognitive Neuroscience is provided jointly by the Department of Psychology and YNiC. The overarching aim of the programme is to provide a bridge between undergraduate study and PhD research in cognitive neuroscience and experimental neuropsychology. You will gain hands-on experience in fMRI, MEG and TMS, including an extended empirical project that will normally employ neuroimaging methods.

This is a full-time one-year programme that has been developed around training and research in the use of non-invasive brain imaging techniques, such as fMRI and MEG, for studying the human brain. The programme provides the same general scientific and generic skills as other Masters programmes, but also allows you to take specialist modules that place neuroimaging in the wider context of cognitive neuroscience research. You will be introduced to the principles of neuroimaging, the design of neuroimaging experiments and the specialist methods required for the analysis of neuroimaging data. The empirical project enables you to participate in the design and implementation of a theoretically motivated piece of pure or applied research in cognitive neuroscience. A core component is providing hands-on training in advanced brain-imaging methods.

Your background
The programme has been designed to be attractive to those who have a real interest in understanding the brain mechanisms that underpin human cognitive processes and behaviour. You would normally require a good degree (First or 2:1) or equivalent qualification in Psychology, Neuroscience, Biology, Computer Science, Engineering or a related numerate discipline.

MSc in Forensic Psychology
Accredited by the BPS Division of Forensic Psychology
This unique taught programme has been developed in partnership with HM Prison Service Directorate of High Security Prisons and is offered as a one-year full-time course. The programme should be attractive to those who wish to work with offenders, within a prison, high secure hospital or probation setting, and those seeking to pursue further research or practice in forensic psychology.

Areas covered include forensic psychology in practice; forensic and generic skills; legal and contextual issues; personality; forensic mental health; research design and statistics as well as statistical applications; and the empirical research project. Additionally, it is possible for students to participate in student visits to forensic establishments.

To become a chartered forensic psychologist, further supervised practice in line with BPS Chartership criteria is required, following successful completion of this programme.

Your background
You should have a good degree (First or 2:1) conferring Graduate Basis for Chartered Membership (GBC) with the BPS, normally in Psychology. You also may be considered if you possess a joint degree in Psychology with a relevant discipline such as criminology or law, providing GBC is conferred. Previous forensic experience is desirable but not essential.

MSc in Forensic Psychology Studies
In order to accommodate students who do not qualify for GBC with the BPS, we offer the MSc in Forensic Psychology Studies on a full-time basis over one year. The course structure follows that of the MSc in Applied Forensic Psychology.

Your background
You should have a good degree (First or 2:1), normally in Psychology. You also may be considered if you possess a joint degree in Psychology with a relevant discipline such as criminology or law.

“During my MA in Cognitive Neuroscience I had the opportunity to use the excellent facilities and gain hands-on experience in the latest neuroimaging techniques. This and the quality of the teaching, research and supervision were the reasons I chose to continue my studies with a PhD. I'm fortunate that I'm able to research a subject I'm passionate about while surrounded by expert knowledge and support.”

JENNIFER, PhD IN PSYCHOLOGY
MSc in Developmental Cognitive Neuroscience

The MSc in Developmental Cognitive Neuroscience is particularly suited to students interested in the relationship between the development of the mind and the brain. It combines theoretical and empirical grounding in the cognitive and biological mechanisms of developmental change with training in the analytical and practical skills required for undertaking research into cognitive development and its neural bases. The programme provides perspectives from developmental cognitive neuroscience and cognitive psychology, as well as hands-on training in imaging methods relevant for developmental research.

The programme is full-time for one year and is suitable for applicants who wish to undertake a Masters-level training before pursuing a research career. The empirical project enables you to conduct research into cognitive development and its neural bases and to get experience of working with children in a neuroscientific setting.

Topical issues in developmental cognitive neuroscience will be covered, including the neural bases of perceiving and acting in the physical and social world and neuroeducation.

In addition, three skills modules are part of the programme: Research Design and Statistics, Topics in Psychological Research, and Transferable Skills.

Your background

You should have a good undergraduate degree (First or 2:1) or an equivalent qualification in Psychology, Neuroscience, Biology or related disciplines.

MRes in Psychology

This full-time 12-month programme is intended primarily for students wishing to pursue their careers in psychological research and its focus is on the various research-based methods that form the basis of scientific psychology. However, the training provided will result in the acquisition of a set of analytical and practical skills that will be generally useful for many different career paths.

The general aims of the programme are to provide students with an understanding of research methods, research techniques and a range of different approaches to data analysis, to develop a range of scientific skills such as designing and conducting empirical research, handling of information, data analysis and the critical evaluation of empirical data.

The programme has been designed to be flexible and thus it gives students the opportunity to either specialise in an area of psychology (Language, Cognition, Social Psychology, Perception and Action, or Comparative Psychology), or explore different research areas. This is achieved by letting students choose among a wide range of available modules, lab placements and project topics.

In the first two terms the programme comprises modules in Research Design and Statistics, Advanced Research Methods, and Transferable Skills. Students also choose to sit one Specialist Module and one Laboratory Placement in an area of their interest. The latter provides the opportunity to participate in laboratory-based research on one of the areas of psychological research. The final term is devoted to an empirical project.

The programme is recognised by the Economic and Social Research Council and is able to offer ESRC 1+3 research studentships.

Your background

You should have a good degree (First or 2:1) in Psychology, Linguistics, Computer Science, Cognitive Science or Behavioural Science. This is an ideal preparation for further psychological research via the PhD route.

MPhil/PhD research degrees

The Department offers two different PhD degrees: a PhD in Psychology and a PhD in Cognitive Neuroscience and Neuroimaging. Both PhD programmes are three-year apprenticeships in research. You will undertake a substantial, novel piece of research under the guidance of your supervisor, which culminates in the submission of a thesis. In addition to your academic supervisor, you will be assigned a Thesis Advisory Panel that comprises two further members of staff. The panel monitors your progress, at termly meetings, and, typically, towards the end of the first year they are responsible for deciding whether it is appropriate to confirm your PhD registration or to recommend downgrading to an MPhil.

We expect our PhD students to complete their thesis within three years.

The first year of your time at York is in part taken up with research training. There are three compulsory taught components. All PhD students take modules in Research Design and Statistics, and Transferable Skills. If you are on the PhD in Psychology programme, you will also take the Topics in Psychological Research module. If you are on the PhD in Cognitive Neuroscience and Neuroimaging, you will also take a specialist Neuroimaging module. A satisfactory standard in these courses is one requisite for the PhD registration confirmation.

Research seminars take place each week for all postgraduates and academic staff; these seminars are provided by both internal and external speakers. Every PhD student gives a presentation on their research to the rest of the Department once in each of their three years of study. PhD students are valued members of our research groups and will participate in regular lab meetings and journal clubs. We provide all PhD students with a desk, a computer and a yearly conference travel allowance.

The Department has been recognised for ESRC 1+3 awards and is regularly able to offer departmental, University and externally sponsored studentships. For details see www.york.ac.uk/psychology/prospective/postgraduate/research/funding.

Your background

You should have a good first degree (First or 2:1) in Psychology, Neuroscience, or a closely related discipline. You should have a good idea of the research project you would like to embark upon and the member of faculty you would like to work with. Relevant research experience will strengthen your application.

MPhil/PhD in Language and Communication

The Department also participates in an interdisciplinary MPhil/doctoral programme in Language and Communication. For more information see page 90.

Available funding

All applicants to all of our programmes are encouraged to apply for any University and externally sponsored studentships that may be available. All of the taught Masters programmes (except for the MSc in Forensic Psychology Studies) have recognition from the ESRC for four-year (1+3) studentships.

The Department is part of the White Rose ESRC Doctoral Training Centre. The Department thus anticipates having ESRC funding available in the coming years. The Department has been awarded Masters studentships for the Cognitive Neuroscience course from the MRC. More details of these awards can be found on our website. In addition to Research Council funding, the Department endeavours to continue to offer studentships at both Masters and PhD levels.

We encourage you to contact us to enquire about what funding opportunities are currently available for the different programmes, or check www.york.ac.uk/psychology/prospective/taught/funding.
### Staff list

</table>
The Centre for Renaissance and Early Modern Studies (CREMS) was launched in 2005 as a forum for interdisciplinary research and teaching on 15th-, 16th- and 17th-century Britain, Europe and the wider world.

CREMS brings together staff and postgraduate students from eight leading departments, all recognised in the 2014 Research Excellence Framework for their international excellence and world-leading research. It is the largest centre of its kind in the UK, described by BBC History Magazine as ‘one of the UK’s top places to study the Renaissance’.

CREMS offers an annual programme of seminars, conferences and public lectures and runs its own interdisciplinary MA in Renaissance and Early Modern Studies, as well as supporting the MA in Renaissance Literature and Early Modern History. The Centre provides a stimulating, interdisciplinary environment for all postgraduate students working within our period and provides a base for a wide range of student-led activities.

CREMS sits within the Humanities Research Centre (HRC) in a contemporary building at the heart of the campus. The HRC is a hub for collaboration between scholars of different disciplines and provides unrivalled facilities for postgraduate study.

CREMS collaborates actively with the Centres for Medieval Studies, Eighteenth Century Studies, and Modern Studies, and enjoys close connections with the Borthwick Institute for Archives, York Minster Library, the National Centre for Early Music, the Institute for the Public Understanding of the Past, the White Rose College of the Arts and Humanities and the Yorkshire Country House Partnership.

CREMS offers:
- a flourishing interdisciplinary community, devoted to the study of the long 16th and 17th centuries
- a dynamic research culture
- a programme of research seminars and conferences attracting scholars of international standing
- support for postgraduate-led workshops, discussion groups and social events
- a commitment to the professional as well as the academic development of our students with an established record of placing students in academic positions.

Your future

Students completing this MA will gain the professional and personal skills required for PhD research or for employment in a relevant field such as teaching, curatorship or broadcasting. Many of our alumni have gone on to do PhD research in York and further afield. Others have secured postgraduate-level training in the UK and overseas, and gained employment in museums and heritage organisations, libraries and archives.

See www.york.ac.uk/crems/postgraduate/profiles.
Programme overview

MA in Renaissance and Early Modern Studies

This interdisciplinary MA is based in the Centre for Renaissance and Early Modern Studies. Spanning eight departments, it provides an unequalled opportunity to study British, European and global cultures c1500 to c1700, and a stimulating environment in which to discuss and develop ideas. Drawing on the expertise of the Departments of History, English and Related Literature, History of Art, Archaeology, Politics, Philosophy, Music, and Theatre, Film and Television, our students are offered an exceptionally wide range of options.

The programme provides a thorough foundation in postgraduate research and writing and will prepare students to undertake PhD research or pursue immediate employment in a relevant field such as teaching, curating or broadcasting. It is designed to provide an advanced introduction to:

- a broad range of primary materials (from literary texts and court records to paintings and musical compositions) documenting the intellectual, political, spiritual and aesthetic cultures of the 16th and 17th centuries
- the archival and interpretative skills needed to search, read and interpret these materials, and to identify and develop original research and written projects
- the relationship between British, European and global cultures during this period of dramatic geographical and intellectual expansion and profound political and religious change
- the challenges and rewards involved in pursuing research questions across departmental and disciplinary boundaries.

Your background

Applicants for the MA in Renaissance and Early Modern Studies are normally required to have achieved a 2:1 honours degree or above (or equivalent) in a relevant subject.

The core module

This module will identify and explore some of the issues that mattered most in the 16th and 17th centuries and continue to matter to the different disciplines that study this pivotal period. You will be exposed not only to interdisciplinary approaches and issues but also to multiple perspectives on the same materials or questions.

Examples of topics recently addressed are as follows:

- Renaissance and/or Early Modern (and/or Baroque): What’s in a name?
  - Problems of periodisation and nomenclature
  - The period’s own temporal consciousness (eg ideas of the return of the Golden Age and the quarrel between the Ancients and the Moderns).

- Space and place
  - The built environment and the social relations it reflects and structures
  - Archaeological approaches to space and material culture
  - Contested demarcations between the public and private spheres.

- Producing knowledge
  - The dissemination and control of ideas
  - Technologies of reproduction
  - Libraries, museums, archives and the structures of information.

- Devotion and dogma
  - Reformation and Counter-Reformation beliefs
  - Conversion narratives and religious feeling and identity

- Propaganda and proselytising in Europe and in the New World.

- Questioning authority
  - Absolutism and its discontents: monarchy, republicanism, utopias
  - Resistance and rebellion
  - The cultures of violence.

- Making sense of nature
  - New ways of classifying and categorising the (natural) world
  - The impact and response to new plants, animals, peoples encountered by European travellers
  - The collection and display of objects and specimens.

- Sexuality
  - A theme of growing importance in Early Modern and Renaissance studies, taking material from the historical, art–historical and the literary.

Option modules

Recently offered options include:

- From Body Beautiful to Body Politic: The Politics of the Body in England
- Literature and Politics in Early Modern England
- Witchcraft and Gender in Early Modern England
- Neighbours: Social Relations in the Age of Reformations
- Objects and the Early Modern
- Religion and the Book
- Shakespeare
- Theatres of Revenge
- Classical Presences in Early Modern Culture
- The Work of Art c1550–c1750: Redeeming Matter
- Domestic Interiors in Italy c1400–c1550
- Interpreting Northern Renaissance Art
- Approaches to the History of Political Thought
- History of the Idea of Toleration
- Directing Early Modern Plays
- Early English Church Music
- Issues in Historical Archaeology.

Please see our website for current options: www.york.ac.uk/crems/postgraduate/masters.

Available funding

Scholarships are available for this MA. Please see our website for details of these and other funding opportunities: www.york.ac.uk/crems/postgraduate/fees-funding.

“I chose the MA in Renaissance and Early Modern Studies for its interdisciplinary approach. My background is history but I wanted to venture out into other disciplines to see what they had to offer. I was excited to discover the wealth of module choices available. I can’t speak highly enough of the Centre and everyone involved. My CV has grown in the short time I’ve been here, from all the opportunities for work experience.”

We are one of the leading research departments in the country. We pride ourselves on the calibre of our academic staff, the majority of whom have been assessed as either ‘world-leading’ or ‘internationally excellent’.

The Department has one of the largest and best-equipped graduate schools of its kind in the country. It provides full-time, part-time and online programmes for students wishing to follow and develop careers in social policy, social work, employment, social security, health, social services, public policy, administration, the voluntary and independent sectors and social research. We also provide professional development for people already working in these fields.

The Department has one of the largest concentrations of social policy and social work research in the UK. Because the Department’s work involves teaching in a changing field, research and teaching are regarded as two sides of a single activity. The Department is home to the Social Policy Research Unit (SPRU) and the Centre for Housing Policy (CHP). In the 2014 Research Excellence Framework assessment, we were ranked third in the UK for overall research performance and equal first for research impact.

Our graduate students have access to staff, projects and findings across wide areas of the subject. Research students have access to facilities in the new Research Centre for the Social Sciences and a lively learning environment, with a flow of international visitors, ensuring that they acquire cutting-edge research skills and competency. The White Rose Doctoral Training Centre has ESRC recognition for full-time, part-time and collaborative studentships.

Programmes overview

Our taught programmes are delivered as full–time, part–time and distance learning. They are designed to provide academic and transferable skills, and some include specialist training for research degrees in a range of social policy and social work areas. We also offer post–qualifying training opportunities. Our graduates are prepared for jobs in research, consultancy, academia or business, both in governmental and non–governmental organisations. We have a vibrant graduate school with many different countries represented and students from all walks of life.

Postgraduate Certificate, Diploma and Masters programmes in Public Management by distance learning

These professional development programmes are designed for those working in or with public services who wish to combine high quality academic study with a flexible and yet structured and closely supported mode of learning.

The part–time programmes are taught online and are highly interactive. Students currently span over 70 countries and are drawn from a wide range of organisations. The programmes address key current themes and issues within the rapidly changing public policy and management environment, and enable you to put your professional experience into context and to develop your skills and understanding.

Each module requires 15 hours of study time per week. A central part of the curriculum design is the use of discussion groups, supported and led by your tutor and aimed at collaborative and shared learning. You will be expected to log on regularly to contribute to these discussions.

The modules for the three–year Masters of Public Administration (MPA) and Masters in Public Policy and Management (MA) Certificate stage are shared: Public Management and Delivery; Governance and Public Administration; and Policy Analysis and Process. These modules also form the Certificate in Policy, Management and Governance.

The Masters in Social and Public Policy (MA) is taught more intensively over two years. The foundation modules are: Social Policy Analysis; Globalisation and Social Policy; and Social Policy: Evidence, Ideas and Institutions.

During the Diploma and Masters years of each programme you will study a combination of compulsory and elective modules and the programme concludes with an independent study project. Please check our website for a full list of modules: www.york.ac.uk/spsw/onlinestudy.

The modules for the Certificate in Delivery and Strategy for Public Services are Public Management and Delivery; Strategic Planning; and Organisational Learning and Performance.

The modules for the Certificate in Public Management in the Information Age are Public Management and Delivery; Public Policy and Management in the Information Age; and Leading and Managing Organisational Change.

Your background

You will need either a good second–class degree and one year’s work experience in the public service field, or (where no first degree is held) relevant professional experience in the field of public management/policy/administration. Access to a personal computer with an internet connection of at least 0.5mbps speed is required.

For further information please email spsw-online@york.ac.uk.

MPA – Comparative Applied Social and Public Policy, Evaluation and Research (CASPPER)

The Masters of Public Administration in Comparative Applied Social and Public Policy, Evaluation and Research (MPA CASPPER) is aimed at mid–career professionals who wish to obtain overseas study and placement experience and who currently work as or intend to become: policy advisers and analysts, project leaders, policy consultants, policy researchers and evaluators.

This 21–month full–time programme specialises in social and public policy analysis and social research, building upon the University’s well–established MPA, social research and comparative analysis programmes.

The curriculum is strongly international, reflecting the research interests of staff based within SPSW (globalisation, East Asia, Asia–Pacific, and Europe). The CASPPER programme is based around a combination of comparative social policy and public management (Year 1), and advanced research skills training (Year 2). The international focus is reflected in a number of the core modules: Comparative Social Policy Methods; Comparative Social Policy: Governance, Management and Delivery; and Globalisation and Social Policy.

In addition to academic modules, participants will complete an Applied Policy Transfer Project. Participants also complete a series of specialised masterclasses that explore issues such as research communication and systematic reviewing of evidence. You will be assigned a ‘learning mentor’ to assist you in tailoring a programme of training activity to your needs and will undertake an Applied Policy Research placement. You will complete a policy–focused systematic review project in the final months of the degree.

Your background

Entrants to CASPPER will have at least three years’ professional experience in a public sector or NGO setting, in addition to an upper second–class honours degree or equivalent qualification. However, if you have relevant work experience with good academic potential you may also be considered.

“After eight years in the workplace, a degree in Social Policy appealed to me for its relevance in this post-recession era. I was thrilled to get a place at York because of the Department’s outstanding reputation and the extensive modules offered. The subject and ethos of the Department inspired me to pursue a career in academia through a PhD. The excellent facilities, staff, research training and interdisciplinary networks have ensured I could not have had a better start to my research career.”

SOPHIE, PhD IN SOCIAL POLICY
MA in Social Policy

MA in Comparative and International Social Policy

MA in Global Social Policy

MA in Global Crime and Justice

These programmes equip you with the skills to analyse social policy with a view to understanding how policies are developed and their role in people’s lives. They develop research and presentation skills to allow you to carry out, and communicate the results of, your own policy research. All four MA degrees offer a combination of taught coursework and a supervised independent study project. Additionally, the MA in Global Social Policy offers a research placement.

The MA in Social Policy is designed for those who are seeking to develop a career in social and/or policy analysis, advocacy or research within the public sector or a socially focused NGO. It covers topics such as: the main pillars of the welfare state in the UK and elsewhere; the impact of globalisation on social programmes in the UK and other countries; how and why patterns of social inequality persist; child poverty at home and abroad.

The MA in Comparative and International Social Policy provides training in policy analysis and policy research with an international and comparative dimension. It is ideal for those working in, or wishing to work in, international policy analysis and policy development in governments, charities and NGOs. The programme adopts a broad international approach, rooted in the conceptual and empirical analyses of higher income countries within the OECD, but adapting these to the study of a broader sample across the globe.

The MA in Global Social Policy uniquely examines regional and global perspectives on social policy. It will provide you with the necessary tools to critically analyse global social policy responses and solutions to global social problems and their implications for nation states. It will also offer the opportunity to undertake a research placement with a relevant organisation working in the area of global social policy.

The MA in Global Crime and Justice is designed for students and professionals seeking to develop or further develop a career in international organisations, criminal justice, the media and research. You will gain an advanced understanding of the theories and realities of global crimes, such as drug and human trafficking, state and corporate crime, as well as the responses taken to them by states and other actors.

Your background

You will normally be expected to have at least a 2:1 first degree or equivalent qualification. You will be considered if you have relevant work experience and academic potential.

MA/PGDip in Social Work

This is a professional qualification which will lead to your registration as a social worker. It requires satisfactory completion of practice-based and academic learning including, for the MA, a 16,000-word independent study project.

The programme is designed to integrate your academic and practice learning. It provides opportunities for you to acquire knowledge relevant to practice, an understanding of models, theories and practice, knowledge of the law, and skills in communication. In the second year you will choose between pathways in children and families, youth social work, mental health social work, and health and disability.

Service users, practitioners and managers are involved in the delivery of teaching.

Your background

You will need at least a 2:1 first degree and prior experience of relevant work.

Available funding

There are no fees, and participants are paid a full salary throughout the programme.

MRes in Social Policy

This programme is designed to provide students with the skills to research contemporary social issues and policy responses to them. The emphasis is on research training; a range of quantitative and qualitative approaches to data collection, analysis and interpretation are covered to an advanced level. The programme also develops presentational skills to communicate the results of your own policy research.

Your background

You will normally be expected to have at least a 2:1 first degree or equivalent qualification. You will be considered if you have relevant work experience and academic potential.

MPhil/PhD research degrees in Social Policy and Social Work

In addition to generic and specialist research training, you will gain transferable skills. Our training programmes are tailored to meet your experience and interests as a research student.

An MPhil thesis is expected to make some original contribution to knowledge; it will not exceed 75,000 words. A PhD thesis will make a more substantial contribution to original knowledge and must not exceed 100,000 words.

You will have a supervisor and a
thesis adviser. Students are welcome at all seminars held in the Department, and present their own work at regular PhD seminars.

Your background
If you hold a good honours degree (normally a 2:1 or equivalent) or Masters degree in Social Policy, Social Work or related social science subjects you may be accepted for a higher degree in research. Students with professional or policy-related qualifications and experience are particularly welcome.

Available funding
The Department has ESRC recognition for research training as part of the White Rose Doctoral Training Centre. The ESRC studentships provide funding for Masters and doctoral studies, and cover tuition fees and a living allowance. We also compete for ESRC collaborative funding studentships that include an element of partnership with external bodies. For more information on funding, please see our website www.york.ac.uk/spsw/pg-funding.

</table>
The Department of Sociology is a leading centre for research, scholarship and teaching in the discipline. Our research on science and technology, language and interaction, culture and new media, has long been internationally recognised as being among the most innovative and influential in the world.

Sociology at York is a small and friendly department with an excellent international reputation for research and teaching. In the most recent major Research Excellence Framework review (REF 2014) Sociology at York was ranked first in the UK.

We have a vibrant and diverse postgraduate community. In recent years, we have welcomed international students from Bangladesh, Bulgaria, China, Germany, Greece, Lithuania, Malaysia, Namibia, New Caledonia, Norway, Pakistan, Poland, South Korea, Thailand and the United States. Our graduate students are fully integrated into the Department’s activities, and they are involved in the student–run Sociology Society, which organises a range of social events as well as invited talks from some of the UK’s most prominent social scientists.

We have an outstanding record of doctoral research in Sociology and in Language and Communication. Recent dissertations have included research in the sociology of science, culture and new media technologies, science fiction, art and aesthetics, the sociology of anomalous or paranormal experiences, cinema, language and social interaction, and ideology and critical theory. Almost all those awarded a PhD since 1980 have gone on to establish successful careers in higher education and other professional employment.

Our MPhil/PhD students also take Department and University courses in a range of non–academic, professional skills. This training in generic work and professional skills complements your academic development and ensures that you will be fully equipped for the next step in your career, be that in university research and teaching or other professional vocations.

Your future

York graduates are well positioned to find employment in a wide range of people–focused careers. Our Masters programmes equip students with practical methodological and conceptual skills that will be useful in many different occupational settings. Previous postgraduate students have gone on to pursue careers in social media, marketing, local and central government and academia.
Programmes overview

Our taught programmes are designed to offer you the opportunity to develop a range of academic and vocationally relevant skills. We recently introduced three new degrees which expand the range of our teaching to include the popular areas of criminology, culture and globalisation.

On the MA in Social Research you will receive training and instruction in a range of methodological skills and research techniques from staff who have substantial experience of all aspects of the research process.

The MA in Criminology and Social Research will invite wide-ranging academic debates about crime, deviance and social control; you will develop an awareness of issues in the fields of criminology and the criminal justice system.

The MA in Social Media and Social Research combines advanced study of social media with practical training in a range of qualitative and quantitative research methods.

The MA in Culture, Society and Globalisation will enable you to find out how lives, identities and cultures across the world are increasingly connected and study issues that affect them all.

The MSc in Social Media and Management, taught jointly with the York Management School, is an innovative degree which assesses the impacts and consequences of a range of new digital technologies.

The MSc in Social Media and Interactive Technologies, taught jointly with the Department of Computer Science, explores the potential of, and requirements for, the effective adoption of new media technologies.

The MA in Sociology (by research) is designed for those who wish to pursue independent, higher-level study (this is not available as a Diploma).

Your background

Applicants will be expected to have at least a 2:1 honours degree in a cognate discipline.

MA in Social Research

This degree is designed to provide practical research skills and analytic techniques necessary for postgraduate study or a career in social research.

Some of the core methods and research issues which are covered in this Masters are: research design; interviewing; approaches to the analysis of discourse and documents; survey design and sampling; ethnography and observation; inferential and descriptive statistics; research ethics; project design and management; computing and data analysis (ATLAS T/i).

Your dissertation research will allow you to build on the taught components of the programme by undertaking an original, small-scale project, under the guidance of a member of staff with expertise in an area relevant to your research topic, thereby gaining practical experience of the research process.

The Department has long-standing expertise in scholarship and research in areas such as criminology, culture, social theory and social media. This Masters degree allows you to explore these areas by taking the Themes and Issues module, taught by experts in these fields. You will have the opportunity to develop expert knowledge in your substantive interests, gain practical experience of designing and conducting an empirical project, and acquire valuable experience relevant to any future PhD research.

MA in Criminology and Social Research

Criminology and Social Research is an exciting Masters degree that combines advanced study of criminology with practical training in a range of qualitative and quantitative research methods. The programme furnishes students with skills in social research that will enable them to pursue a future career in a wide range of criminal justice contexts. By taking this degree, you will develop awareness of the central academic debates in criminology and criminal justice; develop understanding of how academic criminology relates to the ‘real world’ problems of crime, deviance and social control in society; gain a critical understanding and practical knowledge of a range of social research methods relevant to conducting criminological research; acquire the skills and knowledge required to pursue a successful career in academic research or in a wide range of criminal justice-related fields.

MA in Social Media and Social Research

The MA in Social Media and Social Research combines advanced study of social media with practical training in a range of qualitative and quantitative research methods. The programme furnishes students with skills in social research that will enable them to pursue a future career in a wide range of social media and data analysis contexts. The degree will provide a knowledge and understanding of: the role of social media in contemporary societies; the contested nature of their development and diffusion; the implications of social media, and emerging communication technologies, for social research practice, scope and import; the ethical context and practical and conceptual aspects of the research process; the opportunities afforded by communication technologies in relation to developing novel social scientific concepts and new research methodologies based upon large- and small-scale data.

MA in Culture, Society and Globalisation

Culture, Society and Globalisation is a unique Masters degree that provides advanced approaches, methods and skills for tackling important and fascinating questions about ongoing social and cultural transformations. Covering areas including cultural change, social media and social inequalities, it draws on the Department of Sociology’s eminent track record and cutting-edge research. By taking this degree, you will

“When I first started my PhD I expected it to be a lonely pursuit, but it has turned out to be quite the opposite. My PhD colleagues have become close and interesting friends; there is a great vibe in the Department. I am phenomenally well supported by my supervisor who gives me invaluable, detailed and timely feedback on my work. Additionally my Thesis Advisory Panel gives me meticulous feedback and new insights every term.”

GERMAINE, PhD IN SOCIOLOGY
develop knowledge and understanding of key sociological theories, concepts and approaches in the study of culture, society and globalisation. The degree will allow you to pursue a personalised programme of in-depth study and personal educational development in selected areas of relevance to culture, society and globalisation. The degree will enable you to develop skills that are highly relevant for a wide range of professions in the globalised world.

**MSc in Social Media and Management**

Social media technologies are increasingly essential to organisations in the commercial, public and voluntary sectors and are an increasingly ubiquitous facet of social life. The programme is jointly taught by the Department of Sociology and the Management School and is designed to expose participants to the latest research and practice in the management of social media both at York and worldwide.

By taking this degree you will gain a comprehensive appreciation of sociological and management theories about the relationships between new media and sociocultural and organisational change and the adaptation of social media for competitive advantage.

**MSc in Social Media and Interactive Technologies**

This programme is jointly taught by members of the Departments of Sociology and Computer Science. It is designed to respond to the increasing demands from business, academia and policymakers worldwide for professionals and analysts who have an interdisciplinary understanding of the potential and requirements for the effective adoption of social media technologies. A rapid expansion of Web 2.0 interactive technologies, such as YouTube, Wikipedia, Flickr and Facebook, are profoundly changing the production, communication and consumption relationships between users and providers. Entirely new network organisational forms are being developed together with mass collaboration practices, user-generated content and product innovation.

By taking this degree you will gain a comprehensive range of skills and interdisciplinary understanding which will enable you to fully appreciate and respond to the challenges of developing media–networked organisational practices, collaboration, design and product innovation.

**MA in Sociology (by research)**

In this degree, you will be expected to undertake rigorous independent research, working closely with your supervisor (meeting at least twice per term). The dissertation (25,000 words) must be completed within a one–year period full–time, or two–year part–time. It should demonstrate good evidence of your ability to investigate critically a specific field of study, using solid and appropriate research methodology, written to a high standard of presentation.

It is possible for you to transfer your registration from the MA (by research) dissertation to the MPhil/PhD track.

**MPhil/PhD research degrees**

Brief summaries of areas in which members of staff are interested in supervising research students can be found in the ‘Staff list’ section. Further details are available on individual staff web pages, which can be found at www.york.ac.uk/sociology/our-staff. The main areas of Department research expertise in which we offer expert supervision are:

- gender, sexuality and inequalities
- science, health and technology
- language and social interaction
- cultures, values and practices.

Further details of these research clusters can be found at www.york.ac.uk/sociology/research/areas/. The Department is able to offer a dedicated area for all our PhD students, with shared offices and a common room to enable you to socialise and work with your fellow students.

Under close supervision and guidance from your supervisor(s), you will identify and review relevant research literatures; develop and refine your research focus; explore available methodologies and data collection strategies, and consolidate your expertise in the empirical techniques and practical skills required for your project; and acquire skills in writing for academic audiences.

Supervisors are responsible for the progress of the research and training, and meet with students at least twice a term, depending on the nature of the research and the stage of the project. Each student also has a Thesis Advisory Panel (TAP), comprising the supervisor(s) and an additional one or two staff. All students therefore have at least two members of staff able to offer guidance.

MPhil and PhD students who have not taken a research training Masters degree are encouraged to attend relevant modules from the Department’s MA in Social Research. Advanced training in a range of specialist methodologies is available.

The University and the Department have excellent programmes of one–day and half–day courses through which we meet the requirement to provide graduate students with training in generic and transferrable skills. The Department actively encourages its graduate research students to gain experience of undergraduate teaching.

**PhD in Sociology: Bioscience and Society**

This is a four–year PhD programme. Through collaboration with colleagues in the Department of Biology, doctoral students will contribute to the advancement of social scientific understanding of developments in bioscience and society. The aim of the PhD is to build research capacity for the future especially in regard to the growing need for researchers who can engage with science/sociocultural and organisational change and the adaptation of social media for competitive advantage.

**MPhil/PhD in Language and Communication**

The Department collaborates with the Departments of Language and Linguistic Science, Education and Psychology in encouraging interdisciplinary research on topics in language and communication, especially naturally occurring interaction. This programme enables joint supervision for MPhil or PhD students by members of any of the participating departments. For more information, see page 90.

**Available funding**

The Department is part of the White Rose Doctoral Training Centre (a collaborative venture with the Universities of Sheffield and Leeds). This is an ESRC–recognised Centre that is able to offer advanced methods training and a number of studentship awards for MA and PhD study. For more information on funding, please see our website www.york.ac.uk/sociology/pg-funding.
Staff list

Professor and Head of Department
Ellen Annandale, PhD (Brown) Sociology of health and healthcare; sociology of gender

Professors
Nik Brown, PhD (Lancaster) Sociology of health; regulation of bioscience; classical/contemporary social theory
Stevi Jackson, BPhil (York) Feminist theory; gender and sexuality; family relationships; sociology of childhood
Paul Johnson, PhD (Newcastle) Criminology; sexuality; human rights
Celia Kitzinger, PhD (Reading) Genders; sexualities; conversation analysis; childbirth; the social construction of emotions
Sarah Nettleton, PhD (London) Sociology of health and illness; sociology of the body
Robin Wooffitt, DPhil (York) Language and interaction discourse; anomalous/exceptional experiences; parapsychology

Professors Emeritus
Colin Campbell, PhD (London) Culture and cultural change; sociology of religion; action theory
Andrew Webster, DPhil (York) Innovation; new health technologies; science and technology policy and regulation

Readers
David Beer, PhD (York) Social and cultural theory; digitalisation; popular culture
Steph Lawler, PhD (Lancaster) Identities; narratives; kinship and families; sociology of everyday life

Senior Lecturers
Laurie Hanquinet, PhD (Université Libre de Bruxelles) Sociology of culture and art; social science methodology
Brian Loader, MSc (Bristol) Social/community informatics; information age politics; political sociology
Amanda Rees, PhD (Cambridge) Social theory; sociology of science; popular understanding of science; history of primatology
Merran Toerien, PhD (York) Conversation analysis; institutional discourse; health professional–patient interaction; feminism

Lecturers
Kelly Benneworth–Gray, PhD (Loughborough) Critical social psychology; discursive psychology; conversation analysis; crime and criminal investigations; interaction in forensic settings
Siân Beynon–Jones, PhD (Edinburgh) Science and technology studies; reproductive technologies; gender; time; feminist theory
Clare Jackson, PhD (York) Conversation analysis; gender; sexualities; shared decision making in medical interaction
Nisha Kapoor, PhD (Manchester) Race; ethnicity; neoliberalism
Xiaodong Lin, PhD (Birmingham) Gender and migration; men and masculinities; culture and identity
Nathan Manning, PhD (Flinders) Political sociology; politics and emotions; conceptions of agency
Daryl Martin, PhD (York) Urban sociology; culture; mobility
Gareth Millington, PhD (Essex) Crime; race; culture; immigration
Ruth Penfold–MOUNCE, PhD (Leeds) Criminological theory; cultural criminology; media and image
Darren Reed, PhD (Loughborough) Performativity; interaction; social media
Katy Sian, PhD (Leeds) Critical race theory; semantics of tolerance and anti-racism
The Department of Theatre, Film and Television (TFTV) offers a fully integrated approach to critical and creative work in performance and recorded media.

Our postgraduate programmes provide masterclass teaching from industry professionals and offer a constantly evolving dialogue between theory and practice, while regular seminars with leading researchers provide insight into historical and formal analysis. Together these elements provide you with a wholly rounded understanding of your chosen discipline in a unique and dynamic setting.

Special resources
The Department is situated at the heart of the University’s campus on Heslington East. It features industry-standard performance, production and postproduction facilities with 24-hour access. These include:

- a professional scenic stage theatre, seating over 200
- a multipurpose black box theatre/sound stage with a full lighting grid and gantry as well as a two-wall cyclorama for live action and visual effects film shoots
- two fully equipped rehearsal rooms
- a digital cinema screening theatre with full surround sound and digital projection
- two broadcast-ready HD television studios
- two postproduction labs featuring Adobe CC including Premiere Pro and After Effects, Pro Tools, Logic Pro, Nuke, and other leading industry packages
- high-end picture finishing, including Digital Vision Film Master and Autodesk Flame Premium Suites that can master programmes up to 4K resolution
- professional audio recording suites featuring live rooms and bespoke Foley and ADR facilities as well as mixdown theatres featuring Euphonix System 5 Fusion and D-Command audio systems
- three Red Digital Cinema cameras configured for professional feature film production and multiple industry-standard camera systems for location HD production
- a wide range of professional audio equipment for mono, stereo and surround sound recording both in studio and on location.

In the 2014 Research Excellence Framework assessment, the Department was ranked in the top 15 for the proportion of its research designated as ‘world-leading’ or ‘internationally excellent’.

Your future
Our Masters portfolio is guided by a strong commitment to the integration of high-level academic education with industry-relevant training, providing students with the necessary knowledge, skills, curiosity and initiative to pursue careers in theatre, film, television and other industries where communicative media have a central role.
Programmes overview

Each programme will enable you to develop a strong portfolio of academic and transferable skills.

MA in Digital Film and Television Production

Accredited by Creative Skillset, the skills and training body for the British film and television industries

This programme is designed to provide you with the opportunity to develop the skills necessary to write, direct, photograph and edit to an entry–level standard in film and television in the UK and elsewhere. You will gain an understanding of the aesthetic, technical and practical demands of fiction and non-fiction production, as well as a firm grounding in the development of ideas, stories and screenplays. This is all contextualised with our teaching in film theory and history. You will work on individual and group projects, giving you the opportunity to develop a particular specialism, using industry–standard facilities and equipment including our RED cameras and a range of production spaces and postproduction suites. In the latter half of the course you will direct and produce a short film (fiction or non-fiction) and write an accompanying dissertation.

Your background

You will have a good first degree (typically a minimum of 2:1 or equivalent) and evidence of either professional experience or a commitment to film–making.

MA/MSc in Postproduction with Sound Design

Accredited by Creative Skillset

This unique programme provides a detailed examination of both the postproduction and sound design processes for feature film and broadcast television.

You will receive a strong aesthetic, theoretical and technical grounding in the nature of sound as well as its relationship to picture and role in the editing and mixing processes. Programme modules include hands–on application of industry–standard techniques and tools. Location and studio recording, with its many variants including Foley and ADR, are examined in both stereo and surround contexts.

Graduates from this programme work at top facilities such as De Lane Lea Studios, Envy and Molinare.

Your background

You will be expected to have some existing knowledge of audio media production. This may have been gained via a first degree (typically a 2:1 or equivalent) in a related discipline or through professional practice.

MA/MSc in Postproduction with Visual Effects

Accredited by Creative Skillset

This dynamic programme provides an in–depth exploration of the postproduction and visual effects creation processes for feature film and broadcast television.

Students receive a strong aesthetic, theoretical and technical grounding in the editing process to develop an understanding of the relationship between picture and sound as well as the role of visual effects. Programme modules include hands–on application of industry–standard techniques and tools. In addition to creating their own projects, students also work with raw production footage and support materials from two award–winning feature films.

Many graduates of this programme work at top facilities including Double Negative, Moving Picture Company and ILM as well as with leading companies such as Partizan and GSP Studios.

Your background

You will be expected to have some existing knowledge of film, video or TV production. This may have been gained via a first degree (typically a 2:1 or equivalent) in a related discipline or through professional practice.

“...the course appealed to me because of its structure, intensive academic study in the Autumn and Spring Terms, followed by in–depth creative practice in summer. I will leave York having completed two new pieces of dramatic writing – the one–act that I wrote for our playwriting module and the full–length play that will be my final project. I am also being mentored as Associate Director of the TFTV summer show, a new adaptation of Dostoyevsky’s Demons.”

JULIE, MA IN THEATRE: WRITING, DIRECTING AND PERFORMANCE
Your background
The MA is designed to accommodate students who wish to pursue further academic study and students who want to go into the theatre or media industries. Applicants may have a range of academic backgrounds.

MPhil/PhD research degrees
We offer a traditional PhD programme and one incorporating creative practice in theatre, film, television, or interactive media. Brief summaries of areas in which members of staff are interested in supervising research students can be found in the staff list. Further details are available on individual staff web pages, which can be found at www.york.ac.uk/tftv/staff.

Your background
Normally, you will have a good Masters degree in a discipline related to the research area in which you intend to work.

Available funding
Home and EU students can apply for University funding and AHRC studentships. UK students offered a place on our Creative Skillset–accredited programmes are eligible to apply for prestigious BAFTA/Prince William Scholarships. Overseas students may also apply for Overseas Research Scholarships. Modest departmental bursaries are also available. For more information on funding, please see our website www.york.ac.uk/tftv/pg-funding.

</table>
Women’s Studies

Founded in 1984, the Centre for Women’s Studies at York is among Britain’s longest-established bases for feminist and gender-orientated research, and was the first to award a doctorate in Women’s Studies.

We adopt a women-centred and interdisciplinary approach to the changing nature of both women’s experiences and gender relations. By drawing on a range of disciplines – history, literature, philosophy, politics, the sciences, sociology and social policy – we explore the differing perspectives each has to offer, as well as the creative tensions between them. Our international reputation is based on: an emphasis on ‘race’, racism and ethnicity, a commitment to acknowledging the experiences of women in non-Western societies; a strong tradition of historical research; a high profile in debates about literature and cultural production; a focus on sexual diversities; a sensitivity to theoretical and conceptual issues; unique research training programmes; and innovation in teaching, such as writing and photography workshops.

We have active links with Women’s Studies scholars and centres throughout Europe and from a variety of other countries including Taiwan, India, South Korea and China. Projects with an interdisciplinary focus are particularly welcome.

The Centre for Women’s Studies is an interdepartmental centre located between the Departments of Sociology and English and Related Literature. In the 2014 Research Excellence Framework the former was ranked first in the UK and the latter second. In addition, other staff are affiliated to the Centre for Women’s Studies from many University departments. Students in the Centre for Women’s Studies are, therefore, taught and supervised by leading researchers in the field with a wide range of expertise.

The Centre offers both research-based and taught postgraduate programmes in interdisciplinary women’s studies and study can be undertaken on a full- or part-time basis.

The Centre for Women’s Studies welcomes students from all over the world. Currently, approximately half our students are from the UK and half are international students coming from countries in South and East Asia, Europe, Africa, the Middle East and the Americas. Our international mix of postgraduates offers a creative and exciting environment in which to learn about the global and local contexts of women’s lives.

Your future

Our alumni move on to work in the public and voluntary sectors, often in gender or equal opportunities fields. Others take up careers in business, academia, publishing, teaching, health professions, information technology or research.
Programmes overview

Research degrees are available at Masters, MPhil and PhD level in a variety of topics related to women and gender; students should consult the list of staff research interests below. Studying at York will enable you to work with some of the leading researchers in their field.

The taught MA in European Gender and Equality Studies (EGALES) is a two–year, full–time programme. There are also four taught Women’s Studies programmes, available at MA and PG Diploma level. PG Dip Women’s Studies students follow the same modules as MA Women’s Studies students, and are assessed at the same level, but do not undertake a dissertation. The MAs can be taken as stand–alone programmes; they provide specific training for undertaking PhD research, which is recognised by the relevant UK Research Councils.

All our programmes can be taken full–time over one year or part–time over two years. Modules are the same for MA and Diploma programmes; Masters students also complete a dissertation. Certificate programmes comprise three 20–credit taught modules from the MA/Diploma programme.

Your background

You should have a good first degree (a 2:1 or its equivalent), although if you have other professional qualifications these may be considered on their merits. If you are a mature student or returning to education we also welcome your application.

Applicants for the PhD programme should normally hold a Masters degree or equivalent.

MA and PGDip in Women’s Studies (Humanities)

This Humanities programme aims to provide a solid grounding in interdisciplinary women’s studies within the humanities, emphasising gendered aspects of cultural life, representation and textual enquiry. Students will be exposed to a range of conceptual, theoretical and methodological approaches to and debates within women’s studies and become familiar with the epistemological and philosophical underpinnings of feminist methodologies in the humanities. Both programmes aim to foster the development of a critical, self–reflexive and independent approach to research and scholarship, as well as enable the acquisition of transferable career and life skills. The MA will provide candidates with a range of skills and competences to enable them to begin MPhil and PhD research.

MA and PGDip in Women’s Studies (Social Research)

The Social Research programme offers intensive training in social science methodology. The MA is orientated to candidates intending to undertake a PhD with a social science focus and is integral to our ESRC–recognised doctoral programme. An ESRC–recognised Masters degree is essential for those applying for PhD funding from the ESRC. Both programmes provide a solid grounding in interdisciplinary women’s studies, emphasising gendered aspects of social and cultural life in relation to other social divisions and inequalities.

MA and PGDip/Cert in Women, Violence and Conflict

This interdisciplinary programme will expose students to a range of conceptual, theoretical and methodological approaches to and debates on violence against women in both domestic and national and international contexts. Both programmes will familiarise students with the epistemological and philosophical underpinnings of research methodologies, the politics and ethics of research and the principles of research design, and enable them to evaluate and apply a range of methodologies to research questions related to issues of violence against women. The programme will develop a critical, self–reflexive and independent approach to research and scholarship, and enable the acquisition of transferable skills.

MA and PGDip/Cert in Women’s Studies

Both the MA and PGDip programmes aim to provide a solid grounding in interdisciplinary women’s studies, emphasising gendered aspects of social and cultural life, representation and textual enquiry. Students will be exposed to an interdisciplinary range of conceptual, theoretical and methodological approaches to and debates within women’s studies. This route will familiarise students with the epistemological and philosophical underpinnings of research methodologies, the politics and ethics of research and the principles of research design, and enable them to evaluate and apply a range of methodologies to women’s studies research questions. The programme is also designed to foster the development of a critical, self–reflexive and independent approach to research and scholarship, as well as facilitate the acquisition of transferable career skills. This degree provides some flexibility in your choice of modules and, in consultation with the student’s personal supervisor, candidates will design a degree programme in the first week of the course.

MA in European Gender and Equality Studies (EGALES)

The MA EGALES programme is a two–year, full–time programme of 240 UK credits (120 ECTS credits), run in conjunction with six other European universities: Abo Akademi, Finland; Université de Lausanne, Switzerland; Université de Lyon 2, France; Université Toulouse–Le Mireil, France; Universidad Autonoma Barcelona, Spain; and University of Bucharest, Romania.

Students applying to the University (their ‘home’ university) spend the first and last terms at York but will undertake at least one mobility period, and if they wish two. Each mobility period will be spent at a different partner university. The first mobility period will occur in the spring/summer of the first year, the second in the Autumn Term of the second year.

At the University of York, students take two compulsory modules as well as a selection of research methods and optional modules.

“PhD students in the Centre have the opportunity to get involved in all areas of academic life, whether they’re teaching undergraduate modules, presenting at conferences or organising events. There’s a strong support system between students and staff. My supervisor has been fantastic and has been very encouraging throughout. The Centre is like a family, with members from many different backgrounds, and it feels great to be a part of a network of so many talented and inspirational people.”

YI, PhD in Women’s Studies
They also complete their dissertation at York. During their mobility period/s they follow the host universities’ programmes. The programme aims to provide a solid grounding in interdisciplinary women’s studies, emphasising gendered aspects of social and cultural life in relation to other social divisions and inequalities as well as enabling students to expand their knowledge of European languages and cultures. This route will familiarise students with the epistemological and philosophical bases of feminist methodologies. It is also designed to foster the development of a critical, self-reflexive, independent approach to research and scholarship.

**MA/MPhil/PhD research degrees**

The Centre for Women’s Studies offers suitable candidates the chance to study their chosen topic with leading researchers in the field of women’s and gender studies. We welcome applications in a wide range of topics, and students may conduct research based in a single discipline, or develop work which is multidisciplinary or interdisciplinary in its theoretical and/or methodological scope. All students will benefit from the interdisciplinary environment of the Centre, meeting formally and informally with staff and other students researching a range of women’s and gender-related topics from a variety of perspectives. Candidates are advised to consult the staff interests list at the end of this entry for an indication of the range of topics in which we have expertise, and we welcome informal enquiries.

Research degrees can all be taken full-time or part-time: MA one year full-time, two years part-time; MPhil two years full-time, four years part-time; PhD three years full-time, six years part-time. All are examined by thesis, with a viva also required for the MPhil and PhD.

Once their programme has commenced, students undertake their research with the continual guidance of one or two supervisors, and MPhil and PhD candidates have the added support of a Thesis Advisory Panel. In consultation with their supervisor(s) students will also choose appropriate methodology training from our excellent range of modules. To further enhance their research profile and career opportunities, we offer a vibrant programme of transferable skills, which might include, for example: conference workshops, settling in as an overseas student, publishing, writing a CV, and advice on a range of occupations such as research and teaching, entrepreneurial and arts-related work, and NGO and community-related careers.

**Available funding**

Candidates applying for funding are advised to apply early in the academic year, preferably by December (see our website for further details). Home and EU students may apply for AHRC or ESRC funding. The AHRC funding is available for some PhD programmes and some MAs. ESRC studentships covering fees and a living allowance can be applied for through the White Rose Doctoral Training Centre. See our website for further details: [www.york.ac.uk/study/postgraduate/fees-funding/postgraduate/esrc](http://www.york.ac.uk/study/postgraduate/fees-funding/postgraduate/esrc).

Applications for AHRC or ESRC funding must be made through the Centre for Women’s Studies. Details of how to apply will usually be posted on our website in January each year. Contact the Centre’s admissions tutor or administrator for further advice on the process or any queries about your eligibility.

Overseas students may apply for Overseas Student Scholarships and, for PhDs, for Overseas Research Studentships. Further details are available from the International Office and [www.york.ac.uk/study/postgraduate/fees-funding](http://www.york.ac.uk/study/postgraduate/fees-funding).

York Minster Library 7
York Neuroimaging Centre (YNiC) 14, 141
York Plasma Institute 14, 128
Yorkshare virtual learning environment 9
YUSU (Students’ Union) 16
The historic and cosmopolitan city of York is within easy reach of the campus.
UK and campus maps

York has excellent transport links with other major cities both in the UK and abroad. There are international airports at Manchester and Leeds, and York is two hours by rail from London which makes travel to Heathrow and Gatwick airports within easy reach.

**Rail**
There is a frequent, fast train service to York on the main East Coast Line from London King’s Cross to Edinburgh. There is also a direct service across the Pennines between York, Leeds and Manchester Airport.

**Coach**
You can reach York by coach from many destinations around the country. National Express buses stop at York Railway Station.

**Taxi**
A journey by taxi from York Railway Station to the University takes from 15 to 20 minutes.

**Bus**
There are regular bus services between the University and York Railway Station. There is also a frequent free bus shuttle service on the campus between Heslington West and Heslington East.

**Car**
The easiest route to the University is to take the outer ring road (A64 on the south and east sides of the city, A1237 round the north and west) to the junction with the Hull/Bridlington roads (A1079/A166). From this junction the route to the University is signposted.
Disabled parking

All public car parks on the campus have reserved bays for disabled badge-holders.
If you would like a large-print copy of (sections of) this prospectus or to enquire about other formats please contact +44 (0)1904 323196 or email admissions-liaison@york.ac.uk.

Officers of the University

Chancellor
Professor Sir Malcolm Grant CBE, LLD, FAcSS

Pro-Chancellors
Sir Christopher O’Donnell, MSc (Econ), CEng, MI MechE, FIC
Deian Tecwyn, BA, FCA
Lesley Wild, BA

Vice-Chancellor
Professor Koen Lamberts, PhD

Deputy Vice-Chancellor
Dr Jane Grenville OBE, PhD, until 30 September 2015
Professor Saul Tendler, DSc, from 1 September 2015

Pro-Vice-Chancellors
Professor John Robinson, PhD
Professor Deborah F Smith OBE, PhD, FSB, FHEA

Registrar and Secretary
Dr David Duncan, PhD

The University of York
Postgraduate Prospectus
Produced by the Student Recruitment and Admissions Office, and the Marketing and Communications Office

Design: Ball Design Consultancy
Printed by Wyke Printers
Paper: 300gsm/90gsm Lumi Silk
